| <b>Class syllabus:</b><br>Introduction to linear algebra. Basic concepts of linear algebra, vector, matrix, operations with them. Linear vector independence. Matrix rank, Gaussian matrix shape. Inverse matrix. Solving the linear system of equations. Frobeni's sentence. Custom numbers and custom matrix vectors. Leontiev's economic model2. Differential number of functions of one real variable. Function of one real variable, basic properties. Basic Economic Functions - Function of Cost, Income, Profit, Demand Function. Limit. Asymptotes of the function. Differential of function and its use in practice and applications in economics - marginal values. Monotony of functions, extremes, economic verbal tasks at the extreme. Convexity, concavity of function. Function flow, graph. Taylor's polynomial, Taylor's veto. 3. Integral number of functions of one real variable. The concept of desktop content and motivation to define a particular integral. Certain integral, basic properties. Indefinite integral, basic properties and calculation methods. Substitution method, per partes method. Integrating rational functions. Applications of a particular integral: area content, volumes, curve length. Economic applications, calculation of surplus value of the consumer of the producer. |                                       |
