Course requirements: There will be one 75-minute midterm exam and a final 100-minute exam. Grading: The final course grade will be determined by: Midterm: 20%, Active participating on exercises: 10%, Final exam: 70%.	
Learning outcomes: This course is a continuation of Mathematics I and gives students the possibility to gain mathematical skills in solving optimization problems. In many economic applications, a manager deals with situations where several variables have to be included in the mathematical model, e.g. usually the output depends on a set of different input factors. Therefore, this course deals with optimization problems for functions depending on more than one independent variable. Students will solve some real problem using software Wolfram Mathematica.	
Class syllabus: Functions of several variables: partial derivatives, gradient, total differential, competitive and complementary products. Unconstrained and constrained optimization: optimality conditions, Lagrange multipliers, Kuhn-Tucker conditions. Linear programming: simplex methods, duality, sensitivity analysis. Integer linear programming.
