| <b>Learning outcomes:</b><br>The purpose of this course is to take learners with no previous knowledge of Dutch to an advanced level of reading comprehension and translation competence. The target readership includes students, preferably who have a stable knowledge of German and/or Scandinavian languages, as well as researchers, translators and interpreters and everyone who could have a strong interest and motivation to work with Dutch written sources, such as items in the Dutch and Flemish press, academic publications, or the reams of archival materials that exist both inside and outside the Netherlands. |                                                     |

| <b>Recommended literature:</b><br>We use as basic source material the textbook Dutch for Reading knowledge (C. Van Baalen, e.a.), starting with texts of architecture and design, secularization and social issues, migration, water management, postcolonial Netherlands, and the Dutch Golden Age (seventeenth century). Each themed chapter is then based around three texts taken from newspapers, magazines, books, or Internet sources. These engaging excerpts provide insights on historical and contemporary issues, events, and personalities relating to the Netherlands.                                                 |                                                     |

| <b>Recommended literature:</b><br>We use as basic source material the textbook Dutch for Reading knowledge (C. Van Baalen, e.a.), starting with texts of architecture and design, secularization and social issues, migration, water management, postcolonial Netherlands, and the Dutch Golden Age (seventeenth century). Each themed chapter is then based around three texts taken from newspapers, magazines, books, or Internet sources. These engaging excerpts provide insights on historical and contemporary issues, events, and personalities relating to the Netherlands.                                                                                            |                                                     |

| <b>Learning outcomes:</b><br>Students will be informed on the basics in logical analysis of natural language as condition for successful studying of professional texts and on arguments contained in them. They need to comprehend basic syntactical and semantical aspects of natural language and to be acquainted with basics of propositional and predicate logic as well as with rules of valid inference. They will be acquainted with: tools for compacting texts, obtaining practice in their reconstruction; non-deductive forms of inference and the most known forms of eristic arguments; basic knowledge related to theory of definition and theory of questions and answers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                 |
| <b>Class syllabus:</b><br>Language and its functions; language as codification of meaning. Singular and general expressions (properties and relations). Subject and predicate of sentence. Syntactical structure of atomic and molecular terms. Modalities in language, kinds and their function; intuitive understanding of state of affairs. Concept vs. representation, expressing concepts by language and relations among them. Semantically conditioned relations among terms. Modifiers and kinds of them; fuzzy terms. Argumentation, arguments; structure of arguments; deductive arguments. Propositional logic – syntax and semantics. Principle of compositionality for propositions. Propositional connectives in natural language. Propositional logical implication – basic rules of correct inference. Inference in natural language. Expressing of necessary and sufficient condition (promises, legal regulations, causes). Tools for text compacting. Predicate logic. Expressing generality in natural language. Application of basic predicate logic rules to inference in natural language. Abductive inferences and searching for the best explanation. Argument fallacies and eristic arguments. Definitions.
