TABLE OF CONTENTS

1. 01-Mgr-A/00 Academic English Language Preparation (1).....	4
2. 02-Mgr-A/00 Academic English Language Preparation (2).....	6
3. 03-Mgr-A/00 Academic English Language Preparation (3).....	8
4. 04-Mgr-A/00 Academic English Language Preparation (4).....	10
5. 15-Mgr-A/17 Academic English Language Preparation (5).....	12
6. 11-Mgr-A/15 Academic German Language Preparation (1).....	13
7. 12-Mgr-A/15 Academic German Language Preparation (2).....	15
8. 13-Mgr-A/15 Academic German Language Preparation (3).....	17
9. 14-Mgr-A/15 Academic German Language Preparation (4).....	19
10. 16-Mgr-A/17 Academic German Language Preparation (5).....	21
11. 03-Mgr-A/00 Analysis of Substances in Biological Systems.....	22
12. 01-Mgr-A/00 Analytical Chemistry (1).....	24
13. 02-Mgr-A/00 Analytical Chemistry (2).....	26
14. 01-Mgr-A/00 Anatomy and Physiology.....	29
15. 01-Mgr-A/00 Applied Statistics for Pharmacists.....	30
16. 22-Mgr-A/14 Basics of Regulatory Pharmacy.....	31
17. 03-Mgr-A/00 Biochemistry.....	32
18. 01-Mgr-A/00 Bioorganic Chemistry.....	34
19. 02-Mgr-A/00 Biophysics.....	36
20. 03-Mgr-A/00 Biophysics of voltage dependent membrane channels.....	38
21. 04-Mgr-A/00 Biotechnology.....	40
22. 11-Mgr-A/00 Clinical Pharmacology and Pharmacotherapy (1).....	42
23. 12-Mgr-A/00 Clinical Pharmacology and Pharmacotherapy (2).....	43
24. 14-Mgr-A/00 Computer Data Processing.....	44
25. 300-Mgr-A/15 Defense of Diploma Thesis (state exam).....	45
26. 05-Mgr-A/16 Diploma Thesis Preparation KBMBL (1).....	46
27. 06-Mgr-A/16 Diploma Thesis Preparation KBMBL (2).....	47
28. 02-Mgr-A/16 Diploma Thesis Preparation KCHTL (1).....	48
29. 03-Mgr-A/16 Diploma Thesis Preparation KCHTL (2).....	49
30. 04-Mgr-A/16 Diploma Thesis Preparation KFANF (1).....	50
31. 05-Mgr-A/16 Diploma Thesis Preparation KFANF (2).....	51
32. 01-Mgr-A/16 Diploma Thesis Preparation KFB (1).....	52
33. 02-Mgr-A/16 Diploma Thesis Preparation KFB (2).....	53
34. 03-Mgr-A/16 Diploma Thesis Preparation KFCH (1).....	54
35. 04-Mgr-A/16 Diploma Thesis Preparation KFCH (2).....	55
36. 04-Mgr-A/16 Diploma Thesis Preparation KFCHL (1).....	56
37. 05-Mgr-A/16 Diploma Thesis Preparation KFCHL (2).....	57
38. 06-Mgr-A/16 Diploma Thesis Preparation KFT (1).....	58
39. 07-Mgr-A/16 Diploma Thesis Preparation KFT (2).....	59
40. 03-Mgr-A/16 Diploma Thesis Preparation KGF (1).....	60
41. 04-Mgr-A/16 Diploma Thesis Preparation KGF (2).....	61
42. 02-Mgr-A/16 Diploma Thesis Preparation KORF (1).....	62
43. 03-Mgr-A/16 Diploma Thesis Preparation KORF (2).....	63
44. 01-Mgr-A/00 Drug Analysis.....	64
45. 19-Mgr-A/00 General Biology.....	67
46. 06-Mgr-A/00 General and Inorganic Chemistry.....	68
47. 22-Mgr-A/00 Health Psychology.....	70

48. 07-Mgr-A/00	Hygiene of Pharmaceutical Facilities.....	72
49. 08-Mgr-A/00	Immunodiagnostics.....	74
50. 09-Mgr-A/00	Immunology.....	76
51. 09-Mgr-A/15	Latin Language for Pharmacists (1).....	78
52. 10-Mgr-A/15	Latin Language for Pharmacists (2).....	80
53. 18-Mgr-A/00	Management Basics in Pharmacy.....	82
54. 09-Mgr-A/00	Mathematics.....	84
55. 06-Mgr-A/00	Medicinal Plants.....	85
56. 11-Mgr-A/00	Microbiology.....	86
57. 08-Mgr-A/00	Molecular Basis of Drug Development.....	88
58. 12-Mgr-A/00	Molecular Biology of Drug Effects.....	89
59. 07-Mgr-A/00	Natural Remedies.....	91
60. 08-Mgr-A/00	New Trends in Analytical Chemistry.....	92
61. 04-Mgr-A/00	Organic Chemistry (1).....	94
62. 05-Mgr-A/00	Organic Chemistry (2).....	96
63. 13-Mgr-A/00	Pathobiochemistry.....	98
64. 13-Mgr-A/00	Pathology.....	100
65. 14-Mgr-A/00	Pathophysiology.....	101
66. 03-Mgr-A/00	Pharmaceutical Botany.....	102
67. 500-Mgr-A/15	Pharmaceutical Chemistry (state exam).....	103
68. 05-Mgr-A/00	Pharmaceutical Chemistry (1).....	104
69. 06-Mgr-A/00	Pharmaceutical Chemistry (2).....	107
70. 06-Mgr-A/00	Pharmaceutical Informatics.....	108
71. 07-Mgr-A/00	Pharmaceutical Propedeutics.....	109
72. 600-Mgr-A/15	Pharmaceutical Technology (state exam).....	110
73. 05-Mgr-A/00	Pharmaceutical Technology (1).....	111
74. 06-Mgr-A/00	Pharmaceutical Technology (2).....	113
75. 700-Mgr-A/15	Pharmacognosy (state exam).....	115
76. 04-Mgr-A/00	Pharmacognosy (1).....	116
77. 05-Mgr-A/00	Pharmacognosy (2).....	118
78. 16-Mgr-A/16	Pharmacokinetic modelling and drug development.....	120
79. 800-Mgr-A/15	Pharmacology (state exam).....	122
80. 08-Mgr-A/00	Pharmacology and Toxicology (1).....	123
81. 09-Mgr-A/00	Pharmacology and Toxicology (2).....	124
82. 08-Mgr-A/00	Physical Chemistry.....	125
83. 01-Mgr-A/00	Physical Education and Sport (1).....	127
84. 02-Mgr-A/00	Physical Education and Sport (2).....	128
85. 03-Mgr-A/00	Physical Education and Sport (3).....	129
86. 04-Mgr-A/00	Physical Education and Sport (4).....	130
87. 06-Mgr-A/00	Physics.....	131
88. 08-Mgr-A/00	Practice in Community Pharmacy (1).....	133
89. 09-Mgr-A/15	Practice in Community Pharmacy (2).....	135
90. 10-Mgr-A/00	Principles of Molecular Modelling.....	137
91. 11-Mgr-A/00	Problem Solving in Physical Chemistry.....	139
92. 12-Mgr-A/00	Problem Solving in Physics.....	140
93. 25-Mgr-A/14	Promoting Public Health.....	141
94. 09-Mgr-A/00	Radiopharmaceuticals.....	143
95. 10-Mgr-A/15	Retail Pharmacy, Legislation and Ethics.....	145
96. 07-Mgr-A/00	Selected Chapters in Inorganic Chemistry.....	147

97. 08-Mgr-A/00	Selected Chapters in Organic Chemistry.....	149
98. 05-Mgr-A/00	Slovak Language for Foreign Students (1).....	151
99. 06-Mgr-A/00	Slovak Language for Foreign Students (2).....	153
100. 07-Mgr-A/00	Slovak Language for Foreign Students (3).....	155
101. 08-Mgr-A/00	Slovak Language for Foreign Students (4).....	157
102. 12-Mgr-A/00	Social Pharmacy and Pharmacoeconomics.....	159
103. 900-Mgr-A/15	Social Pharmacy and Retail Pharmacy (state exam).....	160
104. 10-Mgr-A/00	Tissues Functional Morphology.....	161
105. 16-Mgr-A/00	Toxicology of Xenobiotics.....	162
106. 17-Mgr-A/00	Veterinary Pharmacology.....	163
107. 14-Mgr-A/00	Xenobiochemistry.....	164

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KJ/01-Mgr-A/00	Course title: Academic English Language Preparation (1)
Educational activities: Type of activities: practicals / lecture / seminar Number of hours: per week: 0 / 0 / 2 per level/semester: 0 / 0 / 28 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 2.	
Educational level: I.II.	
Prerequisites:	
Recommended prerequisites: intermediate level of English	
Course requirements: - active presence at seminars - midterm test (15%) - final test (85%) To complete the course successfully a student must achieve at least 60%. Scale of assessment (preliminary/final): 15% / 85%	
Learning outcomes: After completing the seminars a student is able to understand professional texts, reproduce their content orally and in writing, using English professional terminology from the field of human body and the profession of a pharmacist. Thanks to professional texts a student can use English professional terminology in both professional and non-professional environments.	
Class syllabus: The lessons concentrate on the following topics: the human body, the body systems and their functions, pharmaceutical care, the role of a pharmacist, services available in a pharmacy, laboratory equipment.	
Recommended literature: Bates, M., Dudley, T.: Nucleus: General Science. London: Longman, 1992 James, V.D.: Medicine.: London: Prentice Hall, 1989 Course Reader I, Grammar Workbook I	
Languages necessary to complete the course: English language	
Notes: Academic English Language Preparation (1-4) within Master Study Programme is obligatory elective and is carried out in English study programme in four semesters. The contents of these specialized professional courses closely follow the contents of other professional courses taught in the relevant semesters. It is therefore highly recommended to take the courses gradually from	

the 2nd to the 5th semester (including) of the study, i.e. Academic English Language Preparation (1) in the 2nd (summer) semester of study.

Past grade distribution

Total number of evaluated students: 642

16,67	11,68	17,76	17,6	29,6	6,7

Lecturers: PaedDr. Viera Žufková, PhD., PhDr. Darina Kližanová, Ing. Mgr. Erika Jurišová, PhD.

Last change: 04.04.2017

Approved by: prof. PharmDr. Pavel Mučaji, PhD.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KJ/02-Mgr-A/00	Course title: Academic English Language Preparation (2)
Educational activities: Type of activities: practicals / lecture / seminar Number of hours: per week: 0 / 0 / 2 per level/semester: 0 / 0 / 28 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 3.	
Educational level: I.II.	
Prerequisites:	
Recommended prerequisites: intermediate level of English	
Course requirements: - active presence at seminars - midterm test (15%) - final test (85%) To complete the course successfully a student must achieve at least 60%. Scale of assessment (preliminary/final): 15% / 85%	
Learning outcomes: After completing the seminars a student is able to understand professional texts, reproduce their content orally and in writing, using English professional terminology from the field of factors influencing health condition. Thanks to professional texts a student can use English professional terminology in both professional and non-professional environments.	
Class syllabus: The lessons concentrate on the following topics: factors influencing our health, pollution of environment, drug abuse and drug addiction, health care, disease transmission.	
Recommended literature: Bates, M., Dudley, T.: Nucleus: General Science. London: Longman, 1992 James, V.D.: Medicine.: London: Prentice Hall, 1989 Course Reader II, Grammar Workbook II	
Languages necessary to complete the course: English language	
Notes: Academic English Language Preparation (1-4) within Master Study Programme is obligatory elective and is carried out in English study programme in four semesters. The contents of these specialized professional courses closely follow the contents of other professional courses taught in the relevant semesters. It is therefore highly recommended to take the courses gradually from	

the 2nd to the 5th semester (including) of the study, i.e. Academic English Language Preparation (2) in the 3rd (winter) semester of study.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KJ/11-Mgr-A/15	Course title: Academic German Language Preparation (1)
Educational activities: Type of activities: seminar Number of hours: per week: 2 per level/semester: 28 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 2.	
Educational level: I.II.	
Prerequisites:	
Antirequisites: FaF.KJ/01-Mgr-A/00	
Course requirements: - active participation of students in classroom - midterm test (15%) - final test (85%) To complete the course successfully a student must achieve at least 60%. Scale of assessment (preliminary/final): 15/85	
Learning outcomes: Students are able to use basic German grammar and practice the basic skills of listening, speaking, reading and writing in the present tense with an emphasis upon correct oral and written expressions and aural comprehension. Students are also introduced to various aspects of German culture in Germany and in German speaking countries focusing on the professional environment of pharmacies.	
Class syllabus: The course is for absolute beginners in German language who would like to obtain basic communication skills and grammar structures needed for everyday life in the academic and professional environment in a German speaking country.	
Recommended literature: Schritte international 1: Deutsch als Fremdsprache / Kursbuch + Arbeitsbuch mit Audio-CD zum Arbeitsbuch und interaktiven Übungen: Niveau A1/1, Hueber, 2009. Schritte international 2: Deutsch als Fremdsprache / Kursbuch + Arbeitsbuch mit Audio-CD zum Arbeitsbuch und interaktiven Übungen: Niveau A1/2, Hueber, 2009.	
Languages necessary to complete the course: English language, no previous knowledge of German language is needed for this course.	
Notes: The course is held only in summer semester. It is highly recommended to take the course in the 2nd semester of the study.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KFANF/03-Mgr-A/00	Course title: Analysis of Substances in Biological Systems
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 1 / 2 / 0 per level/semester: 14 / 28 / 0 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 7.	
Educational level: I.II.	
Prerequisites:	
Course requirements: Scale of assessment (preliminary/final): 50/50	
Learning outcomes:	
Class syllabus: The subject is presented as a specialized section of analytical chemistry aimed at the biological systems in their static as well as dynamic state. The elective subject, Analysis of substances in biological systems, is oriented on the analysis of biologically active substances (drugs) and their metabolites in the samples of biological origin as well as on the determination of contaminants in the medicinal herbs and in the environmental parts. The attention is paid to the sample preparation procedures for inorganic as well as organic analytes and various types of the analyses. Student will become skilled at the choice of optimal analytical method (especially within the separation methods) for the given analytical problem. The knowledge of the student are extended in the field of analysis of biological samples by chromatographic and electromigration methods. The latest trends in the analysis of multicomponent mixtures by planar and column chromatographic methods (including gas, liquid and micellar chromatography) and electromigration methods (isotachophoresis, capillary zone electrophoresis and their on-line combination, micellar electrokinetic chromatography, capillary gel electrophoresis, capillary isoelectric focusing, capillary electrochromatography) are presented. Interesting applications of electrochemical methods with the proper sample preparation are included too. Students obtain relevant information concerning advantages and limitations of various analytical methods. They become familiar with the basic principles of a good laboratory practice, the conditions for the sample collection and storage and the work with the scientific literature. The subject is recommended mainly to those which are interested in MSc. thesis at the Department of pharmaceutical analysis and nuclear pharmacy. Laboratory practices are aimed at the utilization of modern instrumental methods (electromigration and chromatographic methods with conventional as well as selective detectors) in the current trace analysis. Syllabus: <ul style="list-style-type: none"> • Introduction to the bioanalysis. • Enzymatic methods in analytical chemistry. • Immunochemical methods. 	

- Polymerase chain reaction (PCR) in bioanalysis.
- Biological and microbiological analytical methods.
- Radionuclides in bioanalysis.
- Nuclear analytical methods in the determination of selected elements in biological samples.
- Biosensors in the determination of biologically important molecules present in body fluids.
- Spectral methods (DAD, LIF, MS, etc.) in bioanalysis.
- Separation methods: Electromigration methods in bioanalysis.
- Separation methods: Chromatographic methods in bioanalysis.
- Hyphenated separation methods with spectral methods in bioanalysis.
- Results evaluation in bioanalysis.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KFANF/01-Mgr-A/00	Course title: Analytical Chemistry (1)
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 4 / 0 per level/semester: 28 / 56 / 0 Form of the course: on-site learning	
Number of credits: 7	
Recommended semester: 3.	
Educational level: I.II.	
Prerequisites:	
Course requirements: Scale of assessment (preliminary/final): 20/80	
Learning outcomes:	
Class syllabus: The scope of Analytical chemistry (1), a subject integrating qualitative analysis, is to provide a consistent and sufficiently extensive theoretical and methodical knowledge base for the chemical and instrumental analysis of inorganic as well as organic compounds including drugs. Besides the above-mentioned direct objective, the education of analytical chemistry significantly influences the formation of logical train of thought of incoming pharmacist and his/her orientation in the field. Experimentally skilled student becomes familiar with a wide scale of pharmaceutically important substances and their properties related to biological activity and therapeutic action. Student acquires creativity and principles of a good laboratory practice. Validation of analytical methods is included. The development of all parts of analytical chemistry as a scientific discipline is characterized by emphasis on microanalysis and trace analysis, development of new methods and procedures and their optimisation. From the methodological point of view, the recent trend is based on computer art including data acquisition and processing and automation of analytical operations. These aspects form a theoretical background of education process with relation to the application of chemical and instrumental methods in pharmaceutical practice. Syllabus: Qualitative chemical analysis <ul style="list-style-type: none"> • General analytical chemistry • Inorganic analysis <ul style="list-style-type: none"> o Group, selective and specific reactions of cations with the emphasis on significant physiological and risk toxic elements. o Group, selective and specific reactions of anions (precipitation, oxidation-reduction). o Masking of interfering components during chemical proofs of cations and anions. o Selection of analytical method and procedure for the analysis of unknown sample. • Organic analysis <ul style="list-style-type: none"> o Proof and determination of C, H, O, N, S and halogens in organic compounds. 	

- o Classification of organic compounds according to the solubility test results as a part of organic sample characterization.
- o Functional group analysis – proof of hydrocarbons, halogen derivatives, active hydrogen, sulphonic acids.
- o Functional group analysis – proof of alcohols (primary, secondary, tertiary).
- o Functional group analysis – proof of phenols (monovalent, aminophenols).
- o Functional group analysis – proof of aldehydes and ketones, compounds with active methyl group - methylketons.
- o Functional group analysis – proof of carboxylic acids, esters, amides, anhydrides.
- o Functional group analysis – proof of amines, nitro- and nitroso compounds.
- Identification methods in the analysis of organic compounds – methods review.
- Derivatization, its role and utilization in analytical chemistry.
- Sample preparation approaches.

From the methodological point of view, the recent trend is based on computer art including data acquisition and processing and automation of analytical operations. These aspects form a theoretical background of education process with relation to the application of chemical and instrumental methods in pharmaceutical practice. Syllabus: Quantitative chemical analysis <ul style="list-style-type: none"> • Volumetric analysis: <ul style="list-style-type: none"> o Indication of equivalence point, chemical indicators, their properties and classification. Titration curves, choice of indicators. o Acidimetry, alkalimetry o Titrations in non-aqueous medium o Oxidation-reduction titrations: Permanganometry, Iodometry, Bromatometry and bromometry o Chelatometry, Mercurimetry o Precipitation titrations: Argentometry o Dichromatometry • Gravimetry 	

- o Gravimetric determination of cations.
- o Gravimetric determination of anions.
- Instrumental analysis
 - Elektrochemical methods:
 - o Potentiometry
 - o Ion-selective electrodes
 - o Polarography
 - o Amperometric titrations.
 - o Conductometric titrations.
 - o Electrogravimetry and coulometry.
 - Spectral analytical methods:
 - o Emission spectrum analysis.
 - o Fluorescence analysis.
 - o Atomic absorption spectroscopy.
 - o Molecular absorption spectroscopy in the visible and ultraviolet part of the spectrum.
 - o Infrared spectroscopy.
 - o Mass spectrometry.
 - o Refractometry, polarimetry.
 - Chromatographic analytical separation methods:
 - o Planar chromatography
 - o High performance liquid chromatography.
 - o Ion exchange chromatography.
 - o Gas chromatography.
 - Electromigration analytical separation methods:
 - o Electrophoresis in planar arrangement, electromigration techniques in capillary arrangement.
 - o Capillary zone electrophoresis (CE).
 - o Capillary isotachopheresis (ITP).
 - o Micellar electrokinetic chromatography (MEKC).
 - o Capillary gel electrophoresis (CGE).
 - o Isoelectric focusing (IEF).
 - Hyphenation of separation methods with spectral methods. HPLC-MS. CE-MS.
 - Nuclear analytical methods:
 - o Nuclear indicator methods – radiochromatography, isotope dilution analysis, radioimmunoanalysis and their applications.
 - o Nuclear analytical methods based on natural radioactivity.
 - o Activation analysis.
 - o Nuclear analytical methods – non activation interaction analysis.
 - o Beta dispersion analysis
 - o X-ray fluorescence.
 - o Identification of β and γ radiation.
 - Sample preparation, validation in analytical chemistry, principles of good laboratory practice.

Course ID: FaF.KFChL/01-Mgr-A/00		Course title: Applied Statistics for Pharmacists			
Educational activities: Type of activities: practicals / lecture / seminar Number of hours: per week: 0 / 1 / 2 per level/semester: 0 / 14 / 28 Form of the course: on-site learning					
Number of credits: 4					
Recommended semester: 4.					
Educational level: I.II.					
Prerequisites:					
Course requirements:					
Learning outcomes:					
Class syllabus: The curriculum is focused on basic definitions, explication of problems and essential computational relations which are explained by means of many practical examples. The theoretical knowledge acquired on the lectures will be deepened on the computational seminars, where the students solve model problems occurring in pharmaceutical praxis using computer-assisted techniques. The examination from the subject Applied statistics for pharmacists consists of elaboration and defending of a semestral work according to the student's interest and after consulting it with the lecturer. However, it must contain the full statistical treatment and interpretation of the selected pharmaceutical problem.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KBMBL/03-Mgr-A/00	Course title: Biochemistry
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 3 / 4 / 0 per level/semester: 42 / 56 / 0 Form of the course: on-site learning	
Number of credits: 8	
Recommended semester: 4.	
Educational level: I.II.	
Prerequisites:	
Course requirements: Main condition for the practical exercises recognition is 60% yield as the sum of three semestral tests. The course is completed by examination made up of two parts written and oral.	
Learning outcomes: After completing of biochemistry course the student should manage the basic biochemical analysis including kinetic enzymology studies on cell and molecular level. More over should have a good knowledge about enzyme catalytic activity and subcellular location of some important enzymes what is the basic premise of understanding mechanism effects of drugs.	
Class syllabus: Dynamic picture of the biological function and properties of the higher protein structure. In this context are introduced enzymes,coenzymes,catalytic function, kinetics of enzyme reaction, inhibition, kinetic inhibition parameters and meaning for pharmacy. No less important is aspect relating to the metabolism of nutrients associated with energy generation in ATP form. Of this aspect is discussed the individual metabolic pathways of saccharides, lipids and proteins, their enzyme subcellular equipment including its regulation on signal molecules level. Krebs cycle and oxidative phosphorylation is introduced as a final catabolic process with emphasis on the interconnection both of them through reduced NADH and FADH ₂ coenzymes that are reoxidated via electron and proton transport- processes located in the inner mitochondrial membrane. Conclusion is devoted to basic information on genetic principles,replication, transcription, recombination and regulation of gene expression.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KChTL/01-Mgr-A/00	Course title: Bioorganic Chemistry
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 0 / 0 per level/semester: 28 / 0 / 0 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 3.	
Educational level: I.II.	
Prerequisites:	
Recommended prerequisites: Recommendation: Organic Chemistry 1	
Course requirements: a) To prepare a seminar paper b) Pass the written test. For passing the exam it is required to achieve more than 50 % of the points. Scale of assessment (preliminary/final): 20/80	
Learning outcomes: The basic aim of the course Bioorganic Chemistry lies in the understanding of biological processes at the level of organic reaction mechanisms and identifying the basic parameters that govern these processes. Bioorganic Chemistry then is to deal with the problems of living nature in which chemical factors play an important role.	
Class syllabus: Bioorganic Chemistry follows the course of Organic Chemistry. Due to the fact that biological objects represent complex systems, their study requires an interdisciplinary approach. The course in the form of lectures is focused on those areas of bioorganic chemistry which are related to the structure of biomolecules, their spatial arrangement and relationships to biological functions. The emphasis is laid not only on the compounds with dominant position in living objects, such as aminoacids, peptides, proteins, heterocyclic bases, mono- and polysaccharides, nucleotides and nucleic acids, lipids but also the on the knowledge of known mechanisms of chemical reactions taking place in a biological system. Watching the rules of creating of macromolecular structure of organisms and their mutual interactions also with other molecules belong to other areas to be studied by bioorganic chemistry. The detailed knowledge of the structure and chemical processes occurring in a biological system allow to create bio-analogical chemical systems operating on a similar principle as in living nature (biomembranes, enzymatic catalysis, etc...) for practical use.

Course ID: FaF.KFChL/02-Mgr-A/00	Course title: Biophysics
Educational activities: Type of activities: practicals / lecture / seminar Number of hours: per week: 0 / 1 / 2 per level/semester: 0 / 14 / 28 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 3.	
Educational level: I.II.	
Prerequisites:	
Course requirements:	
Learning outcomes:	
Class syllabus: Biophysics is that branch of knowledge that applies the principles of physics and chemistry and the methods of mathematical analysis and computer modeling to understand how the mechanisms of biological systems work. It seeks to explain biological function in terms of the molecular structures and properties of specific molecules. The educational background of pharmacy students from physics, physical chemistry and biochemistry is thus used and further widened. The teaching is problem-oriented and the importance of selected biophysical problems for pharmacy is stressed. The individual work of students and their active participation in seminars is emphasized. The subject is divided into two parts – lectures and seminars. In the first part, the students are acquainted with the basics of the subject. In the beginning of semester, each student must individually choose the theme of seminar essay and consult it with the teacher. During the semester, the student searches and studies individually the literature related to the theme and writes an essay about the theme based on the literature. In the second part of semester, the student presents results of his/her work in the form of a short talk at the seminar. Fellow students discuss the theme after presentation.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KBMBL/04-Mgr-A/00	Course title: Biotechnology
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 1 / 1 / 0 per level/semester: 14 / 14 / 0 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 5.	
Educational level: I.II.	
Prerequisites:	
Course requirements: 100% participation on all forms of education. The final test has a writing form and for successful completion it is necessary to obtain minimal 50%.	
Learning outcomes: After attending lectures the student will get a theoretical knowledge about the new drugs development by biotechnological processes, based on the manipulation of nucleic acids and exploiting of recombinant DNA. He will get knowledge about the different cloning and expression vectors, and their application in the production of biopharmaceuticals (e.g. r-hormones, r-cytokines, r-vaccines, r-enzymes and monoclonal antibodies). The latest therapeutic trends are summarized in the lectures dealing with gene therapy, therapeutic cloning and the use of stem cells for treatment of people. After attending of practical exercises the student will learn the basics of work in the molecular biology lab, for example manipulation of nucleic acids, the preparation of recombinant plasmids and the use of PCR for identification of bacteria.	
Class syllabus: INTRODUCTION AND HISTORY OF BIOTECHNOLOGY: differences between classical and molecular biotechnology; relationship between biotechnology and other scientific disciplines, the application of biotechnology in different economic sectors (pharmaceutical and chemical industry, agriculture and others). Manipulation OF NUCLEIC ACIDS: isolation of NAs, DNA sequencing, restriction endonucleases, restriction maps, genome analysis, polymerase chain reaction. methods of Recombinant DNA: (preparation of recombinant DNA, cloning and expression vectors, plasmids and bacteriophages, DNA and cDNA libraries, hybridization of NAs). Plant biotechnology: development and application of transgenic plants, biopharmaceuticals produced by transgenic plants, GMO plants. BIOTECHNOLOGY in pharmacy: biopharmaceuticals, their advantages, expression systems, "upstream" and "downstream" phase of biopharmaceutical production. Biopharmaceuticals: Recombinant cytokines, enzymes, hormones (insulin, somatotropin, the gonadotrophic hormones), monoclonal antibodies and vaccines. Gene therapy and diagnostic: target diseases, the use of biotechnology in the preparation of vectors, gene therapy in vitro and in vivo, examples of human gene therapy, e.g. SCID, ornithine transcarbamylase deficiency, hemophilia, cystic fibrosis, cancers. Therapeutic cloning: differences between reproductive and therapeutic cloning, options, benefits and risks of reproductive cloning of animals, reproductive cloning of	

people. The application of stem cells in therapy: differences between embryonic and adult stem cells, stem cells of umbilical cord blood, ethics, examples of application.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KFCh/01-Mgr-A/00	Course title: Drug Analysis
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 3 / 3 / 0 per level/semester: 42 / 42 / 0 Form of the course: on-site learning	
Number of credits: 7	
Recommended semester: 7.	
Educational level: I.II.	
Prerequisites:	
Course requirements: Conditions for Course Completion: To pass two semestral tests, each minimally 60 % rate, personal attendance at all laboratory exercises (practises). Semestral tests consist of questions related to the lectures and laboratory practices of subject Drug analysis. After only a successful passing of those two tests, a final written exam will be allowed. To pass written final examination test. The final exam will consists of 20 questions, in which all the content of Drug analysis lectures and laboratory practices will be represented. Each of the questions will be evaluated by three points. Maximal number of points is 60 = 100 % correct answers, student must obtain at least 60 % = 36 points, in order to pass it. The exam will last 120 minutes. For the final exam, an unlimited number of students can be registered. The evaluation of the exam is as follows: 100–92 % (evaluation level A), 92–84 % (B), 84–76 % (C), 76–68 % (D), 68–60 % (E), less than 60 % (FX, not passed)	
Learning outcomes: The aim of subject Drug analysis is to teach students in theory and practically the principles of methods and tests used for complex evaluation of drugs and medicines in accordance with applicable regulations – The European Pharmacopoeia 9th Ed. During laboratory practices students work with Pharmacopoeia with the aim to learn to orientate themselves quickly in huge quantity of factographic statements. Specifications and requirements for quality of drugs in connection with the GLP and GMP are integrated into the course. Course content is based on the requirements of The European Pharmacopoeia as the legal norm of a set of technical requirements – among other things, to evaluate the quality of drugs which has to be observed by anyone who treats with medicines, uses them in providing health care, or carries out state supervision in the field of pharmacy.	
Class syllabus: The Lectures Content: 1st week: Drug analysis, contents and importance of the subject. The European Pharmacopoeia, General chapters, Monographs. 2nd week: Qualitative analysis. Identification reactions of ions and functional groups.	

3rd week: Qualitative analysis. Identification reactions of organic drugs. Group reactions and selective reactions – Part I. 4th week: Qualitative analysis. Physical and physicochemical methods – General chapters in the European Pharmacopoeia – Part I. 5th week: Qualitative analysis. Physical and physicochemical methods – General chapters in the European Pharmacopoeia – Part II. 6th week: Qualitative analysis. Identification reactions of organic drugs. Group reactions and selective reactions – Part II. 7th week: Purity of drugs and its control. Physical and physicochemical methods. 8th week: Purity of drugs and its control. Limit tests for inorganic impurities. 9th week: Quantitative analysis – Part I. 10th week: Quantitative analysis – Part II. 11th week: Good manufacturing practice. Validation in pharmaceutical analysis. Technical norms. Factory norms. 12th week: Chemical analysis of drug substances. Quality control of the final pharmaceutical products. Stability of medicinal products. Pharmaceutical analysis in registration of medicinal products. 13th week: Seminar. Computational exercises. The Laboratory Practises Content: 1st week: Qualitative analysis. Identification reactions of ions and functional groups – Inorganic ions. 3rd week: Qualitative analysis. Identification reactions of ions and functional groups – Organic groups. 5th week: Qualitative analysis. Physical and physicochemical methods. Semestral test. 7th week: Purity of drugs and its control. Limit test for inorganic impurities. 9th week: Quantitative analysis. Titrimetric methods – Part I. Semestral test. 11th week: Quantitative analysis. Titrimetric methods – Part II. Physical and physicochemical methods.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KChTL/06-Mgr-A/00	Course title: General and Inorganic Chemistry
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 3 / 2 per level/semester: 28 / 42 / 28 Form of the course: on-site learning	
Number of credits: 8	
Recommended semester: 1.	
Educational level: I.II.	
Prerequisites:	
Course requirements: Seminars: The student is required during the semester to complete all the seminars. During the course each student must write 3 interim tests (max 20 points each). To fulfill the conditions for the examination the student has to reach more than 50% of the total point score from all tests. Laboratory exercises: During the semester, the student is required to complete all laboratory exercises. According to the study programme he/she has to write one test from the laboratory techniques (0-40 points) and independently perform one synthetic work (0-10 points). To fulfill the conditions required for the examination the student has to reach more than 50% from the laboratory exercises of the total point score. The points reached within the seminars and laboratory work are multiplied by the factor of 0,3 and their value is 30% of the exam value in case of a successful completion of the exam. The coefficient obtained from the seminars applies solely to the academic year in which it was obtained. Examination: The course examinations are held exclusively in written form during the examination period. Participation at the exam is subject to the full completion of the seminars and laboratory exercises programme and to the acquisition of more than 50% of the total point score from the seminars and more than 50% of the total point score from the laboratory exercises. The written examination consists of two parts, A and B. Successful completion of the test is conditional on obtaining more than 50% from each section of the written test. At the successful completion the test's average point value obtained from both parts is multiplied by the factor of 0,7. The total mark of the exam is created by the value obtained from seminars and laboratory exercises (30%) and the examination test (70%). Grading scale of the overall result of the exam (after taking into account the outcome of the interim control): A: 87,01 % – 100,00 %; B: 77,01 % – 87,00 %; C: 67,01 % – 77,00 %; D: 57,01 % – 67,00 %; E: 50,01 % – 57,00 %; Fx: ≤ 50,00 %. Scale of assessment (preliminary/final): 30/70	
Learning outcomes: The aim of the course is to acquire the basic knowledge of general and inorganic chemistry. In the context of teaching the course will give students basic laboratory skills and carry out the synthesis of selected types of inorganic compounds. The gained knowledge and skills are necessary for the	

completion of the other chemical courses, such as Organic Chemistry 1, 2 and are also needed for the pharmaceutically oriented courses, e.g. Pharmaceutical Chemistry.

Class syllabus:

The course of General and Inorganic Chemistry is the first principal subject in the complex chemical preparation of students of pharmacy. The first part – general chemistry – includes topics such needed as the theoretical base of the follow up courses of chemical, pharmaceutical, biological and medical orientation. Great attention is paid to the issue of the chemical bond and the structure of substances, in particular to their relevance in explaining the characteristics of pharmaceutical compounds, including their pharmacotherapeutic effects. In the second part of the course – systematic inorganic chemistry – the chemistry of elements and their compounds is presented according to their rational division into the groups of the periodic system of elements. Alongside with the interpretation of the nature of the chemical reactivity of elements and their compounds, emphasis is laid on their use in pharmacy and medicine on the basis of their function, place and importance in biological systems. Needed attention shall be paid to the environmental education. The course is comprehensively designed, focusing on Master Degree accredited study programme of Pharmacy. Further pharmaceutically significant knowledge from the systematic inorganic chemistry is supplemented in the course of Selected Chapters in Inorganic Chemistry.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KORF/22-Mgr-A/00	Course title: Health Psychology
Educational activities: Type of activities: practicals / lecture / seminar Number of hours: per week: 0 / 1 / 1 per level/semester: 0 / 14 / 14 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 7.	
Educational level: I.II.	
Prerequisites:	
Course requirements: Student has to attend all lectures and seminars to be allowed to take the oral examination.	
Learning outcomes: After finishing the course student will gain basic overview in the following topics: social psychology, psychology of patients, psychology of diseases and psychology of healthcare professional, information on basic types of personalities, assertive behaviour, abilities to handle conflict situations, stress, how to communicate correctly and use the verbal and nonverbal communication, how to get ready for public presentation, how to communicate with patients, colleagues, other healthcare professionals, representatives of pharmaceutical industry, insurance companies and/or media. Students through various tests can find out information on themselves (what kind of personalities they are, what should they focus on while solving of stress and conflict situations, and how they can improve their communication abilities).	
Class syllabus: <ol style="list-style-type: none"> 1. Introduction to Health Psychology . 2. Psychology in disease. Relationship patient – healthcare professional in psychology. 3. Personality, forming of personality and its position in social group. 4. Social interaction and communication. 5. Verbal communication in the work of pharmacists. 6. Non-verbal communication in the work of pharmacists. 7. Optimal communication in the work of pharmacists. 8. Conflict in community pharmacy and its resolution in team of co-workers. 9. Stress situations in community pharmacy. 10. Public requirements for pharmacist's personality. 11. Basic types and characteristics of problematic customers of pharmacy. 12. Cooperation within a team of co-workers in healthcare, leadership. 13. Public presentation, job interview and presentation of self.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KBMBL/07-Mgr/A/00	Course title: Hygiene of Pharmaceutical Facilities
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 1 / 0 per level/semester: 28 / 14 / 0 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 5.	
Educational level: I.II.	
Prerequisites:	
Course requirements: For credits is required successful completion of two pre-tests during the semester with a minimum success rate of 50% from each of tests and subject is terminated by the writing form with a minimum success rate of 60%.	
Learning outcomes: The subject focuses mainly on the explanation of the facts that are most important for the pharmacist. The rules used for compliance with hygiene air, water and waste in environment will be the first information to topic. The aim of environmental health is to inform students about how to improve the health status of the population, how to create conditions in environment that will ensure, respectively contributed to the protection of human health, its healthy development, physical and mental well-being. Food hygiene and tools general use is a field which studies the process of nutrition and addresses how their ensure for the physiological needs of man . Nutrition can increase the overall fitness of the organism, however, if it is irrational, causes the emergence of the widespread outbreak of civilization diseases (obesity, diabetes , cardiovascular disease, tumours). Health risks associated with food are caused by foreign substances contained in food. Therefore, following to the basic rules of nutrition learn students the adverse effects of contaminants in food and their prevention against them . In terms of experts, pharmacist obtains in the last part of the subject the necessary knowledge and information about observing the rules of hygiene, of the pharmaceutical equipment, of the work in these facilities and the hygiene in the preparation of pharmaceuticals, which requires discipline , knowledge of the dangerous factors and basic knowledge of effective measures necessary to achieve the health security in terms of microbiological contamination of pharmaceutical equipments.	
Class syllabus: The first part Hygiene pharmaceutical facilities engages in the basic constituents of the environment and its effects on human health - specifically, is it the position of hygiene and its role in the health and environmental hygiene air, water and waste. In the second part, students learn the basic rules of nutrition - specifically food hygiene. The third part emphasizes occupational hygiene, pharmaceutical facilities and rules of hygiene in the preparation of drugs. The basic contents of Hygiene pharmaceutical facilities is based on the current status of the individual disciplines relating to hygiene and environment specific rules or methods used in practice - requirements for	

hygiene in pharmacy, manipulation with medicines and drugs and evaluation of microbial products of the pharmaceutical industry in terms of requirements sterility and non-sterility according to Pharmacopoeia.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KBMBL/08-Mgr-A/00	Course title: Immunodiagnostics
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 1 / 1 / 0 per level/semester: 14 / 14 / 0 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 4.	
Educational level: I.II.	
Prerequisites:	
Course requirements: During the semester there will be 2 written exams for 20 points each. To obtain an A rating, a total of at least 37 points is required. To obtain a B rating, a total of at least 33 points is required. Requirements for the remaining ratings are as follows: C - at least 28 points, D - at least 24 points and E - at least 20 points. Credits shall not be granted to a student who scores less than 20 points on these written tests. A student may be excused from a maximum of 2 laboratory exercises. The student must submit duly completed and evaluated protocols of all completed exercises. To pass examination based on these exercises, students need to get at least 12 points out of 20.	
Learning outcomes: Students will become familiar with the diagnosis of the human immune profile, cellular and humoral factors of immunity, as well as serological and immunochemical techniques used to evaluate the immune profile. They will gain knowledge about the isolation, purification and preparation of vaccines and immune sera, as well as diagnosis of immune factors which are encountered in pharmaceutical practice.	
Class syllabus: The subject of Immunodiagnostics builds on the knowledge of basic immunology and clinical immunology. It deals with the human immune profile, the status of cellular and humoral immunity and the immunochemical techniques used to evaluate it. It deals in detail with the latest training techniques, recombinant DNA and subunit vaccines, detailed preparation of monoclonal antibodies and immunodiagnostic preparations. A separate section is devoted to modern immunoassay techniques for detection of antigens and antibodies, without which the modern diagnosis of diseases would be unimaginable.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KBMBL/09-Mgr-A/00	Course title: Immunology
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 1 / 0 per level/semester: 28 / 14 / 0 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 3.	
Educational level: I.II.	
Prerequisites:	
Course requirements: During the semester there will be 2 written exams for 20 points each. To obtain an A rating, a total of at least 37 points is required. To obtain a B rating, a total of at least 33 points is required. Requirements for the remaining ratings are as follows: C - at least 28 points, D - at least 24 points and E - at least 20 points. Credits shall not be granted to a student who scores less than 20 points on these written tests. A student may be excused from a maximum of 2 laboratory exercises. The student must submit duly completed and evaluated protocols of all completed exercises. To pass examination based on these exercises, students need to get at least 12 points out of 20.	
Learning outcomes: Students completing the subject should understand the mechanisms and function of the immune system and its fundamental importance to human life. They should understand that the application of drugs in the body influences the cellular and humoral immune mechanisms that are fundamental in the prevention and treatment of all diseases. In addition, they must understand the basic principles of immunodiagnostic methodologies which are encountered in the practice of pharmacy.	
Class syllabus: The subject of Immunology deals with knowledge of basic immunology as well as clinical immunology. The student learns the composition and function of the human immune system, mechanisms of cellular and humoral immunity at the cellular and molecular level, as well as the preventive-therapeutic and practical application of immunology in medicine and in pharmaceutical practice. The basic section of the course deals with inflammation, fever, structure and function of the complement, cytokines, antigens and antibodies. Emphasis is on the preparation and use of monoclonal antibodies in pharmacy and medicine, without which modern diagnosis and therapy of diseases would not have been possible. The clinical immunology section is focused on anti-infective, anti-tumor immunity and transplantation, and also deals with immunopathological diseases, as well as the latest immunostimulatory and immunosuppressive pharmaceuticals, preparation, application and use of vaccines and products for passive immunization for prevention and therapy of diseases. The basic principles of immunodiagnostic methodologies encountered in pharmaceutical practice constitute the final section.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KJ/09-Mgr-A/15	Course title: Latin Language for Pharmacists (1)
Educational activities: Type of activities: seminar Number of hours: per week: 2 per level/semester: 28 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 1.	
Educational level: I.II.	
Prerequisites:	
Course requirements: active participation on seminars, writing of two semester tests with the overall grade at least 60%, written and oral exam Scale of assessment (preliminary/final): 15/85	
Learning outcomes: The student achieves a profound knowledge of specialized terminology based on words of Latin and Greek origin in the field of pharmacy. Terminology encompasses terms of pharmacopoeia, names of drugs of botanic origin and their mother plants, chemical substances used in industrial production of medicines and finally medical terms (mostly of anatomy and pathology). He (she) is able to make use of it in daily practice and possibly to create new terms in his (her) research activities.	
Class syllabus: The Latin Lessons concentrate on achieving a thorough knowledge of : 1. professional glossary (pharmaceutical, medical, botanical terms) 2. principles of formation of terminology on the basis of Latin and Greek languages 3. grammar inevitable for correct understanding of specialized texts 4. origin of some most frequent terms and ideas in antiquity	
Recommended literature: Vallová, E., Hamar, T.: Latin Language for Pharmacy Students. Bratislava: Comenius University, 2011 Ozábalová, Ľ., Vallová, E., Hamar, T.: Trojjazyčný latinsko-anglicko-slovenský slovník pre študentov farmácie a medicíny. Bratislava: Univerzita Komenského, 2012

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KORF/18-Mgr-A/00	Course title: Management Basics in Pharmacy
Educational activities: Type of activities: practicals / lecture / seminar Number of hours: per week: 0 / 2 / 1 per level/semester: 0 / 28 / 14 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 4.	
Educational level: I.II.	
Prerequisites:	
Course requirements: Completion of lectures and seminars. Preliminary tests minimum 50% for each one. The exam performed by the written test with a minimum threshold of success 60%. The assessment: A = 100-95%, B = 94-85%, C = 84-75%, D = 74-70%, E = 69-60%, FX = 59% and less.	
Learning outcomes: The subject presents a selection of specific topics from the comprehensive theory of management issues with regard to the specifics management in health care. It gives students the basic knowledge, which the medical staff – and pharmacist too – should be theoretically recognize and practically apply in their manager position. Content of subject includes basic management functions, such as planning, organizing, control, motivation and leadership style, discusses the specifics of management practices in the pharmaceutical and healthcare as well as the basic marketing function in public pharmacy. Subject provides students a foundation for their future management work in different areas of health and pharmacy. Theoretical findings are discussed by practical demonstration in the seminars (presentation and discussion, case studies, management games).	
Class syllabus: <ol style="list-style-type: none"> 1. General theory of Management, management terminology, managers. 2. Management as process. 3. Functions of Management – organizing, planning, controlling. 4. Motivation and leadership. 5. Health Management and its specifics. 6. Quality Management. 7. Management practices in pharmacy, communication and business ethics. 8. Patient's Management. Patient Empowerment. 9. Pharmaceutical market. Stakeholders and customers related management. SWOT analysis. 10. Marketing – strategy, planning, marketing mix. 11. Marketing in public pharmacy. 12. Communication mix of pharmaceutical products. Public Relations, Advertisement and ethics. 13. Human Resource Management.

COURSE DESCRIPTION

University: Comenius University in Bratislava					
Faculty: Faculty of Pharmacy					
Course ID: FaF.KFChL/09-Mgr-A/00		Course title: Mathematics			
Educational activities: Type of activities: practicals / lecture / seminar Number of hours: per week: 0 / 1 / 2 per level/semester: 0 / 14 / 28 Form of the course: on-site learning					
Number of credits: 4					
Recommended semester: 1.					
Educational level: I.II.					
Prerequisites:					
Course requirements:					
Learning outcomes:					
Class syllabus: Algebra – expressions, equations, inequations and methods of their solution. Functions – algebraic and transcendent, properties of functions. Differential calculus – limit and derivative, differential and difference. Progressions and series – arithmetical and geometrical, function approximation. Differential equations and their applications. Statistical analysis of sets and dependencies – mean values, measures of variability, correlation and regression.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KBMBL/11-Mgr-A/00	Course title: Microbiology
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 1 / 0 per level/semester: 28 / 14 / 0 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 3.	
Educational level: I.II.	
Prerequisites:	
Recommended prerequisites: Biology.	
Course requirements: All laboratory practices completed by reports, running evaluation by a preliminary test (successful in at least 60 %) and final examination (combined test with oral).	
Learning outcomes: By passing through the subject the student acquires the basic knowledge of the world of microorganisms, and their role in infectious diseases, as well as their application in pharmacy.	
Class syllabus: Structure, physiology, biochemistry and genetics of bacterial cell. Comprehensive virology. Interaction of microorganisms with their environment, particularly with host organism. Pathogenicity and infection. Pathogenic bacteria, viruses, fungi and protozoa. Types and mode of action of antibiotics and other antimicrobial agents. Prophylactic vaccines. Mechanisms of bacterial resistance to antimicrobial drugs. Disinfection, sterilization and preservation. Utilization of microorganisms in pharmacy. Ecology of microorganisms in pharmaceutical settings. Microbial contamination of pharmaceutical products and its control.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KFANF/08-Mgr-A/00	Course title: New Trends in Analytical Chemistry
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 1 / 2 / 0 per level/semester: 14 / 28 / 0 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 5.	
Educational level: I.II.	
Prerequisites:	
Course requirements: Scale of assessment (preliminary/final): 30/70	
Learning outcomes:	
Class syllabus: One of the most important role of analytical chemistry in relation to the pharmaceutical control practice is the elaboration and application of modern analytical methods for the quality and quantity evaluation of drugs, analysis of multicomponent mixtures, monitoring of concentration levels of drugs and their degradation products in biological materials. Trends in analytical chemistry should allow for the essential theoretical knowledge and experimental skill for students. The crux of the elective subject Trends in analytical chemistry is laid on the modern instrumental analysis methods with an emphasis on the possibilities of their utilization. Here, the analysis of drugs, multicomponent inorganic analysis of essential and toxic elements in the particular branches of environment (air, soil, plants, water) and the monitoring of drugs and their metabolites in biological fluids are highlighted. The laboratory practices are aimed at the utilization of modern instrumental techniques – the radionuclide X-ray fluorescence analysis (RRFA), atomic absorption spectroscopy (AAS), electrochemical dissolving analysis, nuclear magnetic resonance (NMR), infrared (IR) spectrometry (interpretation of drug spectra), selected separation methods (high performance liquid chromatography, HPLC, gas chromatography, GC, capillary electrophoresis, CE) – mainly in the trace analysis. Obviously, the knowledge and experience obtained after passing this subject are advantageously utilized by students in their MSc. Thesis as well as in the postgraduate study (PhD.). Syllabus: <ul style="list-style-type: none"> • Sample preparation procedures for the analysis of drugs, biological material and environmental components. • Electrochemical methods: New trends in the theory and instrumentation in the field of electrochemical analytical methods. • Biosensors and current trends of their utilization. • Spectral methods, classification. • X-ray fluorescence analysis – new pharmacopeial method and its utilization in pharmacy. 	

- X-ray fluorescence analysis - Determination of selected elements in pharmaceutical formulations and biological samples.
- UV-VIS absorption spectrometry, Fluorescence spectrometry and current trends of their utilization.
- Utilization of IR spectra for the drug identification.
- Fundamentals of NMR spectroscopy, interpretation of NMR spectra, analytical application of NMR.
- Mass spectrometry and current trends of their utilization.
- Separation methods, classification.
- Modern liquid chromatography and its utilization in pharmacy.
- Progress in the field of capillary electromigration methods – ITP, CZE.
- Separation and determination of biologically important compounds and their enantiomers by capillary electrophoresis.
- New trends in hyphenated separation methods.
- Validation of advanced analytical methods.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KChTL/04-Mgr-A/00	Course title: Organic Chemistry (1)
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 3 / 1 per level/semester: 28 / 42 / 14 Form of the course: on-site learning	
Number of credits: 7	
Recommended semester: 2.	
Educational level: I.II.	
Prerequisites:	
Course requirements: Seminars: The student is required during the semester to complete all the seminars. During the course each student must write 4 interim tests (0-20 points) and 1 review test (0-40 points). To fulfill the conditions for the examination the student has to reach more than 50% of the total point score of all tests. The points reached within the seminars are multiplied by the factor of 0,3 and their value is 30% of the exam value in case of a successful completion of the exam. The coefficient obtained from the seminars applies solely to the academic year in which it was obtained. Laboratory exercises: The student is required during the semester to complete all laboratory exercises. According to the study programme, he/she has to write one test from the laboratory techniques (0-40 points) and independently perform four synthetic tasks (0-10 points). To fulfill the conditions needed for the examination the student has to reach more than 50% of the total point score from the laboratory exercises. Gained points are then multiplied by the factor of 0,1 and their value is 10% of the exam value in case of a successful completion of the exam. Examination: The course examinations are held exclusively in written form during the examination period. Participation at the exam is subject to the full completion of the seminars and laboratory exercises programme and equisition of more than 50% of the total point score from the seminars and more than 50% of the total point score from the laboratory exercises. The written examination consists of two parts, A and B. Successful completion of the test is conditional on obtaining more than 50% from each section of the written test. At the successful completion the test's average point value obtained from both parts is multiplied by the factor of 0,6. The total mark of the exam is created by the value obtained from seminars (30%), laboratory exercises (10%) and the examination test (60%). Grading scale of the overall result of the exam (after taking into account the outcome of the interim control): A: 87,01 % – 100,00 %; B: 77,01 % – 87,00 %; C: 67,01 % – 77,00 %; D: 57,01 % – 67,00 %; E: 50,01 % – 57,00 %; Fx: ≤ 50,00 %. Scale of assessment (preliminary/final): 30+10/60	
Learning outcomes: The course provides a comprehensive preparation of theoretical organic chemistry, as well as practical training in the field of organic synthesis focusing on the field of selected pharmaceutically important compounds. The gained knowledge and skills are necessary for the completion of the other chemical courses, such as Organic Chemistry 2, and are also needed for the pharmaceutically	

oriented courses, e.g. Pharmaceutical Chemistry. The course is comprehensively designed, focusing on Master Degree accredited study programme of Pharmacy.

Class syllabus:

The theoretical teaching contains basic principles of chemical bonds origin and the spatial structure of organic compounds with a reflection on their physical-chemical properties. The main attention is paid to the individual sorts of stereoisomerism, electron effects, acid-based characteristics and salt formation, to the development and significance of conjugated and aromatic systems, and, first and foremost in terms of reactivity and behavior in biological systems. It puts the emphasis on their importance in chemistry of pharmaceuticals and other following chemical courses of the pharmaceutical study. Mastering the knowledge of theoretical teaching and their application is the subject of seminars. The modern element in the course teaching is the use of computer technology to molecular modeling of the type organic molecules and molecules of certain medicinal products, as well as the possibility of continuation in elective courses - Principles of Molecular Modeling and Selected Chapters in Organic Chemistry. The aim of practical exercises is to manage the laboratory techniques and organic synthesis, including the identification of products by determining the fundamental constants and evaluation of the results of measurements of physical methods according to the SL-1. The course of Organic Chemistry 1 is one of the fundamental courses in a comprehensive chemical preparation of students of pharmacy. When teaching the subject emphasis is laid on the use of acquired knowledge of organic chemistry in pharmacy and medicine. The course is comprehensively designed, focusing on Master Degree accredited study programme of Pharmacy.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KBMBL/13-Mgr-A/00	Course title: Pathobiochemistry
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 1 / 0 per level/semester: 28 / 14 / 0 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 5.	
Educational level: I.II.	
Prerequisites:	
Course requirements: Assesment: examination /written test + oral examination/. Conditions: 1. Attendance of all practical exercises and seminars. 2. Preparation of protocols from all practical exercises. 3. Summary achievement of at least 60% from tests. The conditions of the preliminary evaluation will be specified in practical exercises. Information about the conditions for the participation on the first date of the final exam will be specified by separate announcement.	
Learning outcomes: After attending the course student will receive informations about the causes of changes in metabolism of main biochemical substrates of different diseases, molecular basis of inflammatory processes and biochemical and molecular basis of malignat processes. In laboratories the student will acquire the skills for determination of clinical-biochemical parameters, especially enzymes, isoenzymes and markers important for diagnosis of diseases. Attending the course is necessary for understanding of molecular basis of pathobiochemistry processes.	
Class syllabus: - Characterization of disorders of metabolic pathways of main biological substrates as a response to pathological processes. - Disorders of regulation of glucose and glycogen metabolism, biochemical picture of diabetes mellitus. - Disorders of lipid metabolism, production of ketone bodlies. - Lipoproteines: transport form of lipids, regulation of cholesterol metabolism, dyslipoproteinemias, metabolism of sphingolipids and lipidosis. - Disorders of protein digestion, absorption of aminoacids, proteolytic enzymes, disorders of aminoacids metabolism. - Disorders of synthesis and degradation of purine and pyrimidine nucleotides, Lesch-Nyhan syndrome. - Disorders of heme metabolism, porphyrias, hemoglobinopathias, metabolism of bilirubin. - Enzymes in diagnosis of diseases, molecular diseases and hereditary enzymes deficiency.	

<ul style="list-style-type: none"> - Disorders of water metabolism, acidobasic balance and mineral metabolism. - Biochemical principles of inflammation, the role of free radicals and mediators in inflammatory process. - Biochemical and molecular principles of malignant processes and specific markers.

COURSE DESCRIPTION

University: Comenius University in Bratislava					
Faculty: Faculty of Pharmacy					
Course ID: FaF.KFB/03-Mgr-A/00		Course title: Pharmaceutical Botany			
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 3 / 0 per level/semester: 28 / 42 / 0 Form of the course: on-site learning					
Number of credits: 6					
Recommended semester: 2.					
Educational level: I.II.					
Prerequisites:					
Course requirements: Scale of assessment (preliminary/final): 50/50					
Learning outcomes:					
Class syllabus: Main attention in the field of systematic botany and ecology is paid to basic taxonomical units with respect to diacritical characteristic of medicinal plants. In the field of plant cytology the course focuses on morphological and functional differences of plant cells and on cell inclusions that present determinant characteristic in plant/drug description. The anatomy of individual types of plant tissues is detail in accordance with their development stage attributes and function. In the field of organology the course focuses on the anatomy and morphology of particular plant tissues with respect to specific characteristics of pharmaceutically important species.

Prerequisites: (FaF.KFB/03-Mgr-A/00 - Pharmaceutical Botany and FaF.KFT/12-Mgr-A/00 - Clinical Pharmacology and Pharmacotherapy (2) and FaF.KFT/09-Mgr-A/00 - Pharmacology and Toxicology (2) and FaF.KBMBL/09-Mgr-A/00 - Immunology and FaF.KBMBL/11-Mgr-A/00 - Microbiology and FaF.KFT/13-Mgr-A/00 - Pathology and FaF.KFT/01-Mgr-A/00 - Anatomy and Physiology and FaF.KFT/19-Mgr-A/00 - General Biology and FaF.KFANF/09-Mgr-A/00 - Radiopharmaceuticals and FaF.KFCh/01-Mgr-A/00 - Drug Analysis and FaF.KFCh/06-Mgr-A/00 - Pharmaceutical Chemistry (2) and FaF.KFChL/08-Mgr-A/00 - Physical Chemistry and FaF.KFB/05-Mgr-A/00 - Pharmacognosy (2) and FaF.KBMBL/03-Mgr-A/00 - Biochemistry and FaF.KFANF/02-Mgr-A/00 - Analytical Chemistry (2) and FaF.KFANF/01-Mgr-A/00 - Analytical Chemistry (1))	
State exam syllabus:	
Last change:	
Approved by: prof. PharmDr. Pavel Mučaji, PhD.	

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KFCh/05-Mgr-A/00	Course title: Pharmaceutical Chemistry (1)
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 0 / 1 per level/semester: 28 / 0 / 14 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 5.	
Educational level: I.II.	
Prerequisites:	
Recommended prerequisites: The KCHTL/01-Mgr-A/00 Organic Chemistry (1), KCHTL/02-Mgr-A/00 Organic Chemistry (2) and KBMBL/03-Mgr-A/00 Biochemistry courses have been very strongly recommended to be successfully passed.	
Course requirements: Conditions for Course Completion The conditions for a successful completion of lectures and seminars from the Pharmaceutical Chemistry (1) course: a) The personal attendance at the lectures – students are rigorously required to attend to 80% of the lectures; the personal attendance at the seminars – students are rigorously required to attend to 100% of the seminars. b) The successful course completion based on the successful passing of all semestral preliminary tests. To pass all the scheduled semestral preliminary tests (2 tests, 20 points of an each test would be reached at maximum), the 60% or higher rate must be achieved of each (12 points score or higher of the each test is essential). c) The successful course completion based on the successful passing of a final (written) exam. The final written exam will consist of the set of 25 questions, in which all intended and lectured pharmacotherapeutic groups will be represented. The questions will cover (i) knowledge from a field of „general“ Pharmaceutical/Medicinal Chemistry (ii) a definition and classification (division) of particular pharmacological classes, (iii) a mechanism(s) of action, (iv) chemical structures of particular compounds, (v) structure-activity relationships in detail, and (vi) metabolic pathways related to the compounds. The final written exam from Pharmaceutical Chemistry (1) course will last 120 minutes. An each of the questions will be evaluated by 2 points. The evaluation of the exam will be as follows: 50–47 points (evaluation level A), 46–44 points (B), 43–39 points (C), 38–35 points (D), 34–30 points (level E), less than 30 points (FX, not passed). For the final written exam, an unlimited number of students can be registered, however, 2 days before the exam date at the latest. The registration for the final exam must be done via an interactive AiS2 system only.	
Learning outcomes:	

Results of Education

The Pharmaceutical/Medicinal Chemistry (the Pharmaceutical Chemistry (1) course) is a science unto itself, a central science positioned to provide a molecular bridge between the basic science of biology and the clinical science of medicine (analogous to chemistry being the central science between the traditional disciplines of biology and physics). From a very broad perspective, a drug design may be divided into two phases: a) fundamental concepts about drugs, receptors, and drug–receptor interactions; 2. basic concepts about drug–receptor interactions applied to human disease. The Pharmaceutical/Medicinal Chemistry is multidisciplinary, drawing on theoretical chemistry, organic chemistry, analytical chemistry, molecular biology, pharmacology, and biochemistry. Despite these complexities, the Pharmaceutical/Medicinal Chemistry has a clear „bottom line“ – the design and discovery of drug molecules with a comprehensive definition and characterization of their properties, taking into account (i) a structural integrity of the drug molecules (in pharmaceutical, pharmacokinetic and pharmacodynamic phases), (ii) their structural fragments (pharmacophore, toxicophore, metabophore; interchangeable bioisosteres), (iii) structural properties, (iv) physicochemical features (solubility, surface activity, lipophilicity, acid-base properties), (v) shape properties (geometric, conformational, topological, steric), (vi) stereochemical properties (optical isomers, enantiomers, geometric isomers), (vii) electronic properties. Following that knowledge, structure–(biological) activity relationships are comprehensively investigated.

Prerequisites:	
Recommended prerequisites: KFCHL/08-Mgr-A/00 Physical Chemistry, KFANF/02-Mgr-A/00 Analytical Chemistry (2) KFB/05-Mgr-A/00 Pharmacognosy (2); KFCH/06-Mgr-A/00 Pharmaceutical Chemistry (2)	
Course requirements: Assessment through a written examination, for successful completion at least 70 %. Assessment A: 95-100%, B: 88-94%, C: 82-87%, D: 76-81%, E: 70-75%. Scale of assessment (preliminary/final): 20/80	
Learning outcomes: By passing the course, the student will have a complex theoretical knowledge of the drugs as dispersion and application systems and practical experience with the preparation of dosage forms.	
Class syllabus: Medicines have dosage form which is given by the necessity of their administration and coexistence of present drugs and additives (pharmaceutical ingredients). Pharmaceutical technology (galenics) is a field of pharmaceutical science dealing with the design and formulation of medicines (dosage form design), the manufacture of these medicines on both a small (compounding) and a large (pharmaceutical technology) scale, evaluation and safety of the medicines. It studies the conditions how drugs and additives (pharmaceutical ingredients) can be converted into medicines, then the regularities which rule the relations between medicines and the effect of administered drugs. In compliance with the given definition of the subject of pharmaceutical technology as a science and as educational discipline "Pharmaceutical technology" concerns these fields: # Drug Technology, biotechnology # The drug as a dispersion and an application system # Systematic classification of the drugs and dosage forms # Technological procedures and equipments for the preparation and production of the drugs # Pharmaceutical adjuvants - excipients # Colloidal dispersion systems, lyophobic and lyophilic colloids # Dispersion system liquid in liquid and solid in liquid # Preparations obtained by extraction methods # Liquid preparations for oral use # Preparations for inhalation	

# Parenteral preparations - injections, infusions – production, use # Parenteral controlled release drug delivery systems # Eye and nasal preparations # Liposomes and microemulsion as a new drug delivery systems

Course requirements: Scale of assessment (preliminary/final): 10/90					
Learning outcomes:					
Class syllabus: During lectures the students become familiar with parts of existing pharmacognostical pharmacopoeial monographs with particular plant sources of medicinal substances, with the biogenesis of primary and secondary plant metabolites, their function and significance in the plant body, systems of classification and characteristics of each group of secondary metabolites in terms of their chemical properties. Students will gain an overview of drug use and its main biologically active substances that can be part of mass-produced phytopharmaceuticals. The content of macroscopic and microscopic analysis forms practical exercises with anatomical and morphological characteristics of drugs, drug recognition as macroscopic components of tea mixtures and microscopic identification of the diacritical characteristics.

Course requirements: Scale of assessment (preliminary/final): 10/90					
Learning outcomes:					
Class syllabus: Students shall receive informations related to the classification of drugs according to their pharmacological effects, or use in the prevention and treatment of diseases, including basic information on side effects and interactions with the participation of individual active ingredients of natural origin. The emphasis is on drugs and their active substances, which are part of phytopharmaceuticals registered in EU countries, or which are recorded in the current issue of the European Pharmacopoeia. During the chemical part of practical exercises, students are familiarized with the test methodologies of selected pharmacopoeial drugs and with the identification and determination of active substances. They also work out basic procedures of extraction and isolation of substances from plant material with emphasis on chromatographic methods.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KFChL/16-Mgr-A/16	Course title: Pharmacokinetic modelling and drug development
Educational activities: Type of activities: lecture / seminar Number of hours: per week: 2 / 1 per level/semester: 28 / 14 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 8.	
Educational level: I.II.	
Prerequisites:	
Course requirements: During semester students will pass 2 written tests worth 15 points each. During the examination another written test worth 50 points will be given, followed by an oral examination. Points from seminar tests and current examination test will be added together. To obtain the grade A students need to collect a total of at least 65 test points, to obtain grade B at least 60 points, to obtain grade C at least 55 points, to obtain grade D at least 50 points. To obtain grade E a total of at least 40 points is needed.	
Learning outcomes: The course is suitable for students of Pharmacy program who are aiming to pursue a research carrier. Students will hear about mathematical models of disposition kinetics of chemicals in the body and will master physicochemical principles of relationships between pharmacokinetic profile and molecular structure of potential drugs. After passing the course the students will be familiar with methods of determination and in silico prediction of transport properties of drugs. They will obtain a broader picture of the complex issue of research and optimization of properties of compounds undergoing pharmaceutical development. The student will be able to use the acquired skills in drug discovery programs.	
Class syllabus: Phenomenological approach to transport and fate of a drug in the organism. Principles and mathematical models of kinetics of absorption, disposition and biological effect of a drug. Pharmacokinetic compartmental models of distribution based on the physiology of human body. Kinetic parameters and their significance in drug design. Methods for prediction of physicochemical properties and kinetic parameters of bioactive compounds from their molecular structure. Optimization of biological screening tests and interpretation of experimental data.	
Recommended literature: M. Boroujerdi: Pharmacokinetics: Principles and Applications, McGraw-Hill, New York, NY, U.S.A., 2002. E. H. Kerns, L. Di: Drug-like Properties: Concepts, Structure Design and Methods, Elsevier, Burlington, MA, U.S.A., 2008. G. Keserü, D. C. Swinney: Thermodynamics and Kinetics of Drug Binding, Vol. 65, Series: Methods and Principles in Medicinal Chemistry, Wiley-VCH Verlag, Weinheim, Germany, 2015. G. L. Patrick: An Introduction to Medicinal Chemistry, 5th Ed., Oxford University Press, Oxford, UK, 2013.	

Languages necessary to complete the course: English					
Notes: The capacity of the course is restricted to 10 - 15 students. Priority will be given to students with better grades (superior weighted study average determined according to the Study Code of the Faculty of Pharmacy). Please consult the teacher before signing up for this course.

Educational level: I.II.					
Prerequisites:					
Course requirements:					
Learning outcomes:					
Class syllabus: The subject Physical chemistry is aimed on the following fields: Structure of matter and grounds of spectral methods (UV-VIS, fluorescence, IR, Raman, NMR spectroscopy). Chemical thermodynamics – fundamental laws, phase equilibrium, solutions and liquid mixtures, condensed systems. Electrochemistry – solvents and solutions of electrolytes, strong and weak electrolytes, acid- base equilibrium, ampholytes, potentiometry. Chemical kinetics – reaction rates and orders, diffusion and kinetics of heterogeneous processes, rate of dissolution. Colloids and surfaces – surface phenomena, adsorption, membranes and membrane phenomena. The lectures from physical chemistry are supplemented by practical exercises, where the students verify their theoretical knowledge in practice.

Educational level: I.II.					
Prerequisites:					
Course requirements:					
Learning outcomes:					
Class syllabus: The subject Physics is taught by means of lectures and laboratory exercises. The lectures are aimed on the following fields of physics – mass point mechanics, hydrostatics and hydrodynamics, thermodynamics, electricity and magnetism, radiation. The content of the subject Physics is formulated so that the students acquire basic knowledge about physics and understand basic principles of natural phenomenon. The lectures are supplemented by practical exercises, where the students verify their theoretical knowledge in practice. During the laboratory exercises the students acquire basic habits and practical skills which are necessary for experimental work. Practical exercises include particularly experimental methods described in European Pharmacopoeia, e.g. density measurement of liquids and solids, measurement of viscosity, refractive index, optical activity, conductance, and so on. Emphasis is also put on the treatment and interpretation of measured data. An addition to the subject Physics is the subject Problem solving in physics where the students verify their theoretical knowledge in solving examples.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KORF/08-Mgr-A/00	Course title: Practice in Community Pharmacy (1)
Educational activities: Type of activities: practice Number of hours: per week: per level/semester: 4t Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 8.	
Educational level: I.II.	
Prerequisites:	
Recommended prerequisites: KORF/12- Mgr-A/00 Social Pharmacy and Pharmacoeconomics	
Course requirements: Assessment of students is done electronically during practice and in written form in the end of practice (written assessment is made by pharmacy where the student took practice). The final evaluation is arithmetical average of both, the electronic and written assessment. Grading A: 100-93 %, B: 92-85 %, C: 84-77 %, D: 76-69 %, E: 68-60 %, Fx: 59 % and less.	
Learning outcomes: Getting acquainted with the real pharmacy environment, basic knowledge of the pharmacy's assortment of drugs, mastering of basic pharmaceutical activities under supervision of assigned professional in the pharmacy.	
Class syllabus: Characteristics of medical prescription, pharmaceutical dispensing, assortment of drugs in the pharmacy, handling pharmaceutical software, individually and mass prepared medicines, dispensing care, informing, consulting and counseling activities in providing of pharmaceutical care, selftreatment (drugs dispensed without medical prescription, nutritional additives, additional assortment), medical devices, basic economic knowledge, ethical aspects of the pharmacist's profession, ethical codex of a healthcare professional.	
Recommended literature: 1. Hungman, B.: Healthcare Communication, London, Pharmaceutical Press, 2009, 304 p. 2. COURSE DESCRIPTION

University: Comenius University in Bratislava					
Faculty: Faculty of Pharmacy					
Course ID: FaF.KChTL/10-Mgr-A/00		Course title: Principles of Molecular Modelling			
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 1 / 1 / 0 per level/semester: 14 / 14 / 0 Form of the course: on-site learning					
Number of credits: 2					
Recommended semester: 4.					
Educational level: I.II.					
Prerequisites:					
Course requirements: interim evaluation: project elaboration final evaluation: project defense and final test Scale of assessment (preliminary/final): 40/60					
Learning outcomes: The course shall notify the students with the basic principles used in the methods of computer aided molecular design (CAMD).					
Class syllabus: Tuition consists of several blocks of lectures and individual work with the computer. To master the subject Principles of Molecular Modeling at a sufficient level, knowledge of the subject Organic Chemistry 1 is required. The students work with the programmes available at the Department of Chemical Theory of Drugs – ALCHEMY, CHEMWIND, RASMOL, CHEMDRAW, WORD, with the use of the INTERNET computer network and available databases (PDB). Primarily they work on the tasks in the field of medicines, such as finding the optimal conformation of the molecule, electron division, the relationship between the structure and properties of a molecule. They learn how to browse the Brookhaven Protein database. During the tuition they shall work out the project the defense of which is part of the exam.					
Recommended literature: Alan Hinchliffe : Molecular Modeling for Beginners, Wiley, 2003.					
Languages necessary to complete the course: English language

Learning outcomes:					
Class syllabus: The subject Problem solving in physics is intended especially for those students who want to deepen their knowledge of physics and for those who want to be good prepared for the examination in Physics, because solving exercises is one part of this examination. The subject is taught by means of seminars on which the students solve problems from the following fields of physics: mass point mechanics, circular motion, work and energy, mass point dynamics, deformation, friction, hydrostatics, surface tension, capillarity, hydrodynamics (ideal fluid flow, real fluid flow), viscosity, calorimetry, thermal expansion, thermodynamics – work and heat, internal energy, enthalpy, entropy, phase transitions, diffusion, electrostatics, direct current circuits, alternating current circuits, magnetic field and radiation. The effort of teachers is to select problems with pharmaceutical and medical themes.					
Recommended literature: Presentations from Problem solving in Physics may be downloaded from the website http://www.fpharm.uniba.sk/index.php?id=2850

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KORF/25-Mgr-A/14	Course title: Promoting Public Health
Educational activities: Type of activities: lecture / seminar Number of hours: per week: 2 / 1 per level/semester: 28 / 14 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 7.	
Educational level: I.II.	
Prerequisites:	
Course requirements: Completion of lectures and seminars. Written test. The exam performed by the written test with a minimum threshold of success 55%. The assessment: A = 100-95%, B = 94-85%, C = 84-75%, D = 74-70%, E = 69-60%, FX = 59% and less.	
Learning outcomes: Course will enable to students required specific knowledge of promoting and protecting public health and the health education within the practical implementation of public pharmaceutical service-oriented patient. The student will obtain an overview about active health promotion by healthy lifestyle, the role of nutrition and physical activity in health promotion and disease prevention, about position of dietary supplements as an essential part of pharmaceutical care. Also the student will obtain the basic orientation work with EBM information, learn to work with relevant scientific sources of official and Professional institutions. The interactive training should handle professional communication and counselling with patients in self-medication, focussed on the major health risks of community (obesity, cancer, cardiovascular diseases). In the wider context the subject complements the professional profile of pharmacist as expert about medicines and drugs management, but also as an expert in proactive promotion of primary prevention and health promotion in the provision of pharmaceutical care and for society integration of pharmacist as expert in public health tasks.	
Class syllabus: 1. Public health in Slovakia and Europe – legislation, content, characterisation. The basic mutual principles of health policy and public health. 2. Health education - content and form of implementation. Health promotion and its possibilities in the public pharmaceutical services. 3. Public health and its assessment - basic epidemiological parameters in the selected health problem. 4. Prevention as part of health care - general and in public pharmacies. Prevention of selected civilization diseases (oncological and cardiovascular diseases). 5. Basic principles of nutrition. Biologically active food ingredients and their significance for human health. 6. The pharmacist and his possibilities to influence public lifestyle.	

7. Complementary and alternative medicine as part of health care and pharmaceutical care.
8. Dietary Supplements / (nutraceuticals) - general characteristics, legislative, regulatory market entry, inspection, labelling, availability. Specifics legislation supplements, Food Act and the Codex Alimentarius. Nutrition and health claims.
9. Self-medication and the use of non-prescription medicines (OTC) and dietary supplements. Minimum dispensing pharmacist.
10. Information sources and systems relating to dietary supplements. Search for relevant information, free web and free information resource for pharmacists and the general public.
11. Other areas pharmacist active role in the protection and promotion of health (smoking, alcohol, sexual health).
12. Promotion and protection of health in society. Programs, education and application in practical conditions.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KFANF/09-Mgr-A/00	Course title: Radiopharmaceuticals
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 1 / 0 per level/semester: 28 / 14 / 0 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 5.	
Educational level: I.II.	
Prerequisites:	
Course requirements: Scale of assessment (preliminary/final): 20/80	
Learning outcomes:	
Class syllabus: The subject provides theoretical knowledge and experimental skills in preparation and analytical characterization of radiopharmaceuticals in accordance with a good laboratory practice and basic rules for safety and radiation protection. Education process of Radiopharmaceuticals redounds to obtain theoretical rudiments essential for the utilization of radionuclides in production, preparation of radiopharmaceuticals, their standardization and control. As open emitters are used, a good laboratory practice and basic rules for safety and radiation protection are important to implement into working habits. Scope and extent of the subject follow the role of graduate pharmacist in preparation of application forms of radiopharmaceuticals and his sole responsibility for the quality of radiopharmaceuticals in accordance with Pharmacopoeia requirements. Syllabus: <ul style="list-style-type: none"> • Radiopharmaceuticals, characteristics, importance. • Protection against ionizing radiation. • Detection of nuclear radiation. • Production of radionuclides - cyclotron, nuclear reactor • Production of radionuclides - radionuclide generators • Substances for labeling - preparation of radiopharmaceuticals. • Properties of radiopharmaceuticals and methods of quality control of radiopharmaceuticals. • Radioactive drugs I. - The European Pharmacopoeia. • Radioactive drugs II. - The European Pharmacopoeia • Radiopharmaceuticals in medical practice and the use of radionuclide -labeled substances in health research. • .Sign radiopharmaceuticals, GMP and GLP radiopharmacy. • Dosimetry - methods, significance.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KORF/10-Mgr-A/15	Course title: Retail Pharmacy, Legislation and Ethics
Educational activities: Type of activities: lecture / seminar Number of hours: per week: 2 / 2 per level/semester: 28 / 28 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 8.	
Educational level: I.II.	
Prerequisites:	
Recommended prerequisites: KORF/12- Mgr-A/00 Social Pharmacy and Pharmacoeconomics	
Course requirements: During semester there will be two written examinations with 100 points each, for grade A it is necessary to score at least 93 points, for grade B at least 85 points, for grade C at least 77 points, for grade D at least 69 points, and for grade E at least 60 points. Student, who scores less than 59 points from either examination will get no credits.	
Learning outcomes: After finishing the study course „Retail Pharmacy“ students must have knowledge and skills in the pharmaceutical care, and understand the overall content of the course, role of retail pharmacy in the pharmaceutical practice, which focuses on work with medicines and their disposing to patients under certain conditions. They will be able to work with a medical prescription and information gained from it and also with information gained from literature and electronic databases. They will understand means of storage of substances and medicines , preparing of individually prepared medicines and basics of control of pharmaceutical raw materials. After successful finishing of this educational process students have to be able to responsibly and efficiently withstand in all aspects of pharmaceutical care.	
Class syllabus: Retail pharmacy is a basic subject of pharmacy that in theoretical and practical way deals with providing of pharmaceutical care to general public. This subject has close connection with subject Social pharmacy. These two subjects are interconnected by basic categories like active substance and medicine and their place in pharmacy, in society, as well as within pharmaceutical care. Social pharmacy – Retail pharmacy as a whole is a study subject at the Faculty for doctoral study and approved specialization program of pharmacy for postgraduate study. Teaching of subject Retail pharmacy is done by means of lectures and seminars. Syllabus of lectures and seminars consists of the following topics: Legislature in retail pharmacy, pharmaceutical operations, controlling, preparatory, dispensing, supplying, administrative, public and hospital pharmacies economies, information and consulting activities. Quality of doctor’s communication with a pharmacist. Development of e-prescribing. Electronic drug card. Document creation and processing.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KChTL/07-Mgr-A/00	Course title: Selected Chapters in Inorganic Chemistry
Educational activities: Type of activities: practicals / lecture / seminar Number of hours: per week: 0 / 1 / 0 per level/semester: 0 / 14 / 0 Form of the course: on-site learning	
Number of credits: 1	
Recommended semester: 1.	
Educational level: I.II.	
Prerequisites:	
Course requirements: final evaluation: examination in form of the summary test Scale of assessment (preliminary/final): 0/100	
Learning outcomes: The aim of the course is to apply basic knowledge of bioinorganic and biocoordination chemistry in the field of pharmacy.	
Class syllabus: Metal ions under in vivo conditions. Brief basics of coordination chemistry of metal complexes. Stereochemistry of coordination compounds. Which metal ions react with which ligands (creation of complexes). Biologically significant complex compounds. The role and importance of transitional metals in biological systems. Bioinorganic chemistry of oxygen. Trace element in living organisms – their deficiency and excess. Trace element supplementation. Antitumor activity of some metal complexes and their stereochemical requirements. Bioinorganic chemistry and its essential pharmaceutical applications.	
Recommended literature: 1. W. Kaim, B. Schwederski, A. Klein: Bioinorganic Chemistry - Inorganic Elements in the Chemistry of Life. 4th Edition, Wiley 2013. 2. E. Crabb, E. A. Moore: Metals and Life. COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Faculty of Pharmacy	
Course ID: FaF.KChTL/08-Mgr-A/00	Course title: Selected Chapters in Organic Chemistry
Educational activities: Type of activities: practicals / lecture / seminar Number of hours: per week: 0 / 1 / 0 per level/semester: 0 / 14 / 0 Form of the course: on-site learning	
Number of credits: 1	
Recommended semester: 2.	
Educational level: I.II.	
Prerequisites:	
Course requirements: final evaluation: examination in form of the summary test Scale of assessment (preliminary/final): 0/100	
Learning outcomes: The course provides a comprehensive preparation in the field of stereochemistry of organic and pharmaceutically significant compounds in pharmacy.	
Class syllabus: Stereochemistry as a phenomenon. Nomenclature and notation of stereoisomers. Conformation of acyclic and cyclic organic molecules. Chirality of molecules with asymmetric substituted tetrahedral centers. Optical activity. Enantiomers, racemates. Diastereoisomers. Meso compounds. Chirality of the systems not containing stereogenic carbon atom. Axial chirality of allen and biaryl types. Helical structures. Chirality of pharmaceuticals and biological activity. Stereoisomerism on bonds with hampered rotation. Stereoisomerism on a double bond. E/Z isomerism and nomenclature of the respective type of isomers. Cis/trans isomerism of cyclic systems. Stereochemistry of some polymers. Carbohydrates, proteins and nucleic acids. Synthetic polymers. Stereochemistry and organic synthesis. Chiral pool. Techniques and procedures used in separation of stereoisomers. Asymmetric organic synthesis – chiral natural compounds, chiral agents and catalysts.

University: Comenius University in Bratislava					
Faculty: Faculty of Pharmacy					
Course ID: FaF.KFT/17-Mgr-A/00		Course title: Veterinary Pharmacology			
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 0 / 0 per level/semester: 28 / 0 / 0 Form of the course: on-site learning					
Number of credits: 2					
Recommended semester: 8.					
Educational level: I.II.					
Prerequisites:					
Course requirements:					
Learning outcomes:					
Class syllabus:					
Recommended literature:					
Languages necessary to complete the course:					
Notes:					
Past grade distribution Total number of evaluated students: 26

COURSE DESCRIPTION

University: Comenius University in Bratislava					
Faculty: Faculty of Pharmacy					
Course ID: FaF.KBMBL/14-Mgr-A/00		Course title: Xenobiochemistry			
Educational activities: Type of activities: lecture / laboratory practicals / seminar Number of hours: per week: 2 / 1 / 0 per level/semester: 28 / 14 / 0 Form of the course: on-site learning					
Number of credits: 4					
Recommended semester: 6.					
Educational level: I.II.					
Prerequisites:					
Course requirements: Basic condition for the practical exercises recognition is 60% yield as the sum of two semestral tests. The course is completed by written examination.					
Learning outcomes: After completing of xenobiochemistry course the student should identify and outline the main biotransformation way of the metabolites production according to the structure of drugs. Moreover should have a good knowledge about CYPs enzyme isoforms particularly their creation, properties and interactions on cellular level.					
Class syllabus: Principles of xenobiotic (drug) metabolism and phases of biotransformation reactions based on chemical structure. Characterization and function of biotransformation enzymes, mechanism of the 1st phase reaction on CYP-450 level, condition of the CYPs isoenzymes creation – substrate, tissue, species and subcellular specificity. Potential impact of CYPs induction or inhibition on pharmacotherapeutical effect, possible interactions or side drug effect. Meaning of the second biotransformation phase – conjugation reactions with endogenic substrates. Knowledge of xenobiochemistry opens a modern view of safe and efficient pharmacotherapy thus helps with research of the new potential structures of drugs.					
Recommended literature: A Handbook of Bioanalysis and Drug Metabolism, Ed. Gary Evans, CRC Press, London, New York, 2004. Bernard Testa and Stefanie D. Kramer: Chemistry and Biodiversity vol.3, Verlag, 2006.					
Languages necessary to complete the course: English language.					
Notes:					
Past grade distribution Total number of evaluated students: 126
