**Recommended semester:** 5.

**Educational level:** I.II.

**Prerequisites:**

**Recommended prerequisites:**

Pharmaceutical Chemistry is interdisciplinary science filed with a certain connecting function between chemical and biological disciplines; it builds on the knowledge from Organic Chemistry, Analytical Chemistry, Physical Chemistry, Biochemistry and Pharmacology.

**Course requirements:**

**Learning outcomes:**

**Class syllabus:**

The curse content of Pharmaceutical Chemistry I consists of teaching of theoretical principles of pharmaceutical chemistry and drugs (as well as excipients) systematics.

The theoretical principles deal with a definition and a conception of pharmaceutical chemistry; a development of drugs (history, current approach, perspectives); a classification, an activity site of drugs (receptor theories); molecular mechanisms of an activity; a strategy of drugs' research and development; chemical structure – physicochemical properties – biological activity relationships studies; physicochemical properties of drugs (acidity and basicity, lipophilicity, stereochemical aspects); analytical properties of drugs and their biotransformation.

After theoretical principles understanding, students are continuously familiarized with the drugs affecting central and peripheral nervous system, endocrine system; with vitamins and antineoplastics.

## COURSE DESCRIPTION

<b>University:</b> Comenius University in Bratislava	
<b>Faculty:</b> Faculty of Pharmacy	
<b>Course ID:</b> FaF.KFChL/16-Mgr/16	<b>Course title:</b> Pharmacokinetic modelling and drug development
<b>Educational activities:</b>	
<b>Type of activities:</b> lecture / seminar	
<b>Number of hours:</b>	
per week: 2 / 1 per level/semester: 28 / 14	
<b>Form of the course:</b> on-site learning	
<b>Number of credits:</b> 4	
<b>Recommended semester:</b> 8.	
<b>Educational level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Course requirements:</b> During semester students will pass 2 written tests worth 15 points each. During the examination another written test worth 50 points will be given, followed by an oral examination. Points from seminar tests and current examination test will be added together. To obtain the grade A students need to collect a total of at least 65 test points, to obtain grade B at least 60 points, to obtain grade C at least 55 points, to obtain grade D at least 50 points. To obtain grade E a total of at least 40 points is needed.	
<b>Learning outcomes:</b> The course is suitable for students of Pharmacy program who are aiming to pursue a research carrier. Students will hear about mathematical models of disposition kinetics of chemicals in the body and will master physicochemical principles of relationships between pharmacokinetic profile and molecular structure of potential drugs. After passing the course the students will be familiar with methods of determination and in silico prediction of transport properties of drugs. They will obtain a broader picture of the complex issue of research and optimization of properties of compounds undergoing pharmaceutical development. The student will be able to use the acquired skills in drug discovery programs.	
<b>Class syllabus:</b> Phenomenological approach to transport and fate of a drug in the organism. Principles and mathematical models of kinetics of absorption, disposition and biological effect of a drug. Pharmacokinetic compartmental models of distribution based on the physiology of human body. Kinetic parameters and their significance in drug design. Methods for prediction of physicochemical properties and kinetic parameters of bioactive compounds from their molecular structure. Optimization of biological screening tests and interpretation of experimental data.
