<b>Educational level:</b> II.	
<b>Prerequisites:</b>	
<b>Antirequisites:</b> FMFI.KAI/2-AINa-137/20	
<b>Course requirements:</b> projects, written exam Scale: A 95%, B 88%, C 79%, D 68%, E 55% Scale of assessment (preliminary/final): 30/70	
<b>Learning outcomes:</b> After completing the course, students should have a good overview of the theoretical methods used in artificial intelligence. They should be able to use these methods in practice in programming intelligent systems, they should be able to enrich and creatively exploit.	
<b>Class syllabus:</b> 1. Agents, types of agents, agent properties. Browse - informed strategies. 2. Search - informed strategies. Games. 3. Logical agents, propositional and predicate database knowledge. 4. Inference of the predicate in the knowledge base. 5. Planning. 6. likelihood naive Bayesian classifier, Bayesian network. 7. Bayesian network, exact and approximate inference in Bayesian network. 8. Using Bayesian networks in artificial intelligence. Introduction to the use of probability theory in games. 9. Monte Carlo method in games. 10. The classic theory of time series, time series models. 11. Use of Bayesian networks inference in time series with uncertainty. 12. Markov priocesy, Kalman filter, the use of artificial intelligence. 13. Decision Theory: simple and complex decision-making, decision trees.

<b>Number of credits:</b> 5	
<b>Recommended semester:</b> 2., 4.	
<b>Educational level:</b> II.	
<b>Prerequisites:</b>	
<b>Course requirements:</b> Three assignments, each for max. 25 points (minimum 10 required), active involvement during course / discussion, max. 25 points (min. 20 required). Course total = 100 points (min. 51 required) Scale of assessment (preliminary/final): 75:25	
<b>Learning outcomes:</b> This course provides a comprehensive overview of principles of cognition, seen as a natural biological phenomenon. The main objective is the formulation of substantiated interrelation of cognition and evolution. The interdisciplinarity of research in cognitive biology requires students to think multi-disciplinary and on multiple scales.	
<b>Class syllabus:</b> 1. A Brief History of Cognitive Biology 2. The Underlying Principles of Cognitive Biology: 3. The Basal Level of Cognition: Molecular Mechanisms, Concept of Information; Biosemiotics 4. The Medial Level of Cognition: Cellular Communication, Neural Networks; 5. The Apical Level of Cognition: Organismal Behavior; "Rationality"; Goal-directedness; Emotions; Mechanisms for Learning & Memory; Brain Modularity; 6. The Ontic Level of Cognition: Developmental Processes I: Developmental Genetics; Gene Regulatory Networks; Epigenetic Landscape; 7. The Ontic Level of Cognition: Developmental Processes II: Generative Entrenchment & Ratchet Effects; Developmental Constraints; Hierarchical Processing 8. The Supra-Individual Level of Cognition: From Eliminative Reductionism to Organicism; Social Cognition; Evolution of Complex Systems; 9. Résumé & Outlook

<b>Educational level:</b> II.	
<b>Prerequisites:</b>	
<b>Course requirements:</b> Seminar project 30% (includes a demonstration and/or practical exercise) Seminar reading 10% (empirical paper from cognitive psychology) Midterm test 20% Final test 40% Active participation +/- 10% Scale of assessment (preliminary/final): During course: midterm and two seminar projects (30+10+20) = 60% Examination period: final exam 40%.	
<b>Learning outcomes:</b> In this course, students of cognitive science will be introduced to the field of cognitive psychology, including topics pertaining to perception, attention, memory and other higher-order cognitive processes. Neurobiological underpinnings of such cognitive phenomena and processes will be provided to facilitate the interdisciplinary understanding of human cognition. Students will learn to work independently (and in groups), assess scientific articles and search in scientific databases, critically read theoretical and empirical papers, review scientific sources, and present topics of their interest.	
<b>Class syllabus:</b> [1] Sensation & Perception [2] Attention [3] Short-term memory [4] Working memory and Executive functioning [5] Long-term memory (Episodic, Semantic) [6] Mental representation [7] Language [8] Cognition & Emotion [9] Thinking & Reasoning

<b>Recommended semester:</b> 2.	
<b>Educational level:</b> II.	
<b>Prerequisites:</b>	
<b>Course requirements:</b> Each student gives 2 presentations - one during one of the lectures and one during one of the labs. The lecture presentation is based on a scientific paper related to the lecture topic. The lab presentation is related to the particular lab exercise. Students choose topics and dates of their presentations at the beginning of the course. There is also a computational project, usually due by the end of a semester. The final written exam is compulsory. Scale of assessment (preliminary/final): Each of the 2 presentation is worth max. 20%, a project is worth 20% max, total 60%. Final written exam 40% max. Evaluation scale: A 91 – 100 %, B 81 – 90 %, C 73 – 80 %, D 66 – 72 %, E 60 – 65 %, Fx < 60%	
<b>Learning outcomes:</b> After passing this course, students will be familiar with the main theories and approaches of Computational cognitive neuroscience. They will gain an insight of how cognitive processes are affected and controlled by neural circuits in the brain. Students will become familiar with modeling of some basic mechanisms of cognitive functions using the Emergent simulator.	
<b>Class syllabus:</b> <ol style="list-style-type: none"> <li>1. Introduction to computational cognitive neuroscience. Main concepts in modeling.</li> <li>2. Spiking neurons models. Biology of individual neuron and its implementation in Emergent.</li> <li>3. <b>Recommended semester:</b> 2., 4.	
<b>Educational level:</b> II.	
<b>Prerequisites:</b>	
<b>Course requirements:</b> Work on home assignments and sitting the final written exam. Students are required to achieve at least half of marks from home assignments during the semester in order to be admitted to sit the final exam. The final exam is compulsory. Scale of assessment (preliminary/final): Home assignments 50%, final written exam 50%. Grading: A 91-100%, B 81-90%, C 71-80%, D 61-70%, E 51-60%, Fx < 51%	
<b>Learning outcomes:</b> The course will provide students with the basics of computational neuroscience including the basics of the programming metalanguage of the software NEURON, which is used e.g. in the Blue Brain project. The students will learn theoretical and practical principles of application of informatics to the study of processes in neurons and small neural networks. At the same time, they will become familiar with the way of critical thinking, reasoning and problem solving in this research area.

<b>Learning outcomes:</b> The objective of the course is to discuss the main theoretical problems in the research of the origin of human communication. The classes will focus on current theories that aim to provide an explanation for the emergence of human communication as well as on the key concepts in this area (e.g. shared and collective intentionality, mirror neurons and intention understanding, theory of mind, cultural learning etc.). Lessons will be dedicated to a review of relevant empirical evidence and critical assessment of influential studies in comparative psychology, developmental psychology, philosophy and other related disciplines. The course will provide an opportunity to read and analyse research papers, to prepare oral presentations and to write an essay on a selected topic.	
<b>Class syllabus:</b> Communication in other species. Theories of the emergence of human communication. The problem of innateness of mechanisms enabling linguistic communication. Mirror neurons and their role in human communication. The “infrastructure of human communication” – imitation, shared intentionality and theory of mind. Communication and cumulative culture – learning and teaching cultural norms.

<b>Educational activities:</b> <b>Type of activities:</b> lecture / seminar <b>Number of hours:</b> <b>per week:</b> 2 / 2 <b>per level/semester:</b> 28 / 28 <b>Form of the course:</b> on-site learning	
<b>Number of credits:</b> 5	
<b>Recommended semester:</b> 3.	
<b>Educational level:</b> II.	
<b>Prerequisites:</b>	
<b>Course requirements:</b> weekly activity during the semester, paper presentation and discussion moderation, final paper presentation and writing Scale of assessment (preliminary/final): 70/30	
<b>Learning outcomes:</b> The course objective is to provide students with deeper insight into up-to-date research trends in cognitive science, from the perspective of various disciplines (psychological, neural and computational). The course focus is on grounded (embodied) cognition, and its relation to language. The course should also help students in their ability to interpret scientific papers, to formulate, present and defend ideas. The course is primarily taken by mobility students in cognitive science.	
<b>Class syllabus:</b> 1. Introduction to language and concepts 2. Towards embodied cognition 3. Mirror neuron system and its role(s) in cognition 4. Common coding theory, motor simulation, mental simulation 5. Language as action 6. Conceptual and linguistic systems - two theories 7. Meaning as statistical covariation 8. Symbol grounding problem 9. Unification attempts 10. Role(s) of language in cognition and thought 11. Grounding abstract concepts. 12. Summary and reflection.	
<b>Recommended literature:</b> various journal papers related to individual topics

<b>Learning outcomes:</b> Content-wise, the students will learn about: History, theories, methods and topics of cognitive science Disciplines of cognitive science, their specific contributions Representational paradigms Cognitive modeling Ethical aspects of cognitive science and technologies Method-wise, the students will acquire the following skills: Think in an interdisciplinary way, appreciate multiple perspectives. Search and critically evaluate scientific knowledge sources. Critically read papers of different disciplines/styles. Orally present topics of interest. Learn about academic honesty practices and plagiarism. Write a scientific paper and cite literature properly. Review their peer's paper. Work independently, participate in discussions.	
<b>Class syllabus:</b> History, object and methods of cognitive science. Representational paradigms: functionalism, cognitivism, connectionism, embodiment, dynamical systems. Computational modeling. Neuroscience. Ethical aspects of research in cognitive science.

<b>Course requirements:</b> Grading: 91-100% = A, 81-90% = B, 71-80% = C, 61-70% = D, 51-60% = E, else Fx. Scale of assessment (preliminary/final): Active participation during the semester (max. 14 points). Written mid-term test (max. 12 points). Final written-oral exam (max. 24 points).	
<b>Learning outcomes:</b> The course objectives are to make the students familiar with basic principles of various computational methods of data processing that can commonly be called computational intelligence (CI). This includes mainly bottom-up approaches to solutions of (hard) problems based on various heuristics (soft computing), rather than exact approaches of traditional artificial intelligence based on logic (hard computing). Examples of CI are nature-inspired methods (artificial neural networks, evolutionary algorithms, fuzzy systems), as well as probabilistic methods and reinforcement learning. After the course the students will be able to conceptually understand the important terms and algorithms of CI, and choose appropriate method(s) for a given task. The theoretical introduction is combined with practical examples.

<b>Educational level:</b> II.	
<b>Prerequisites:</b>	
<b>Course requirements:</b> Grading: 91-100% = A, 81-90% = B, 71-80% = C, 61-70% = D, 51-60% = E, else Fx. Active participation during the semester: presentations, quick quizzes, ... Final exam: written test Scale of assessment (preliminary/final): Pomer hodnotenia za semester voči skúške: 50/50	
<b>Learning outcomes:</b> Students will become familiar with the basic imaging and other research methods used in modern cognitive neuroscience and understand the basic principles of use of these methods. They will get acquainted with the possibilities and suitability of their use, as well as with the advantages and disadvantages of each particular method. Theoretical knowledge will be supported by practical demonstrations of recording and analyzing brain activity (especially by using EEG).	
<b>Class syllabus:</b> An overview of examination and imaging methods – their temporal and spatial characteristics. Basics of electroencephalography (EEG). Physical and physiological principles of EEG. Basics of EEG signal analysis. Artifacts in EEG. EEG spectral analysis. Evoked and event-related potentials. Principles of computed tomography (CT), magnetic resonance imaging (MRI), functional magnetic resonance imaging (fMRI), positron emission tomography (PET), transcranial magnetic stimulation (TMS) and other modern methods used in the study of brain structure and function. The course will also include a brief introduction to other methods that do not directly measure brain activity, but rather its peripheral manifestations. These include electrooculography (EOG), electrodermal activity (EDA) or skin conductivity (SCL), electromyography (EMG), electrocardiography (ECG), respiratory rate and more.

<b>Learning outcomes:</b> The course will provide an opportunity to acquire knowledge of some of the main topics and problems in the research of social cognition, especially theory of mind. The focus of the course will be on the analysis of relevant theoretical and experimental papers. The course will have an interdisciplinary character – we will discuss influential studies in comparative psychology, developmental psychology, philosophy and other related disciplines.	
<b>Class syllabus:</b> Social cognition in animals and humans. Intentional stance (D. Dennett). Shared intentionality. We-mode. Joint action. Modularity of mind and social cognition. Theory of mind – „classical“(theory theory, simulation theory) and new trends in the research of mindreading (4E cognition, predictive processing). Mirror neurons system. Theory of mind in the brain. Mindreading and autism. Social cognition and cultural transmission. Social cognition and the origins of morality.
