COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Jessenius Faculty of Medicine in Martin	
Course ID: JLF.ÚA/J-1-PA-001/15	Course title: Anatomy and Physiology
Educational activities:	
Type of activities: practicals / lecture	
Number of hours:	
per week: 2 / 4 per level/semester: 30 / 60	
Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: 100% participation in practicals, at least 60% success rate on written tests (subjects – anatomy, physiology, histology, medical biology). Mark: A: 93–100 %, B: 88–92 %, C: 81–87 %, D: 73–80 %, E: 60–72 %, FX: 59 % and less. Scale of assessment (preliminary/final): 10/90	
Learning outcomes: ANATOMY: The graduate of Anatomy understand principles of human body, its parts and organs construction up to such details, that the gathered knowledge is permanent and becomes a base for understanding of physiological and pathological processes and changes. His knowledge should enable him to be an adequate partner for physicians in the process of health care. PHYSIOLOGY: The Physiology aim is to acquire basic knowledge about physiological functions of the human organs and systems , and about the relations between physiological systems. The emphasis is on the physiology of woman-mother (physiological changes during pregnancy, puerperium, lactation). Practical sessions from Physiology expand practical skills required for clinical practice – basic clinical examinations for the assessment of physiological functions, which is necessary for understanding of human physiology. MEDICAL BIOLOGY: After completing the subject Medical Biology, the student has knowledge about the structure of the cells (prokaryotic, eukaryotic), their shape and inner compartments. Graduate obtains the information about structure and function of cell organelles, gene expression, cell transport and signalling, cell division as well as about influence of pathologic factors on cell.	
Class syllabus: ANATOMY: Heart. Arterial and venous system, blood circulation. Respiratory system. Digestive system. Urinary system. The male reproductive system. Female reproductive system. Lymphatic system. Central nervous system. Spinal cord. Spinal nerves.Oblongata, pons, midbrain. Cranial nerves. Diencephalon. Sensory pathways. Basal ganglia. Motor pathways - pyramidal, extrapyramidal tracts. Visual organ. The organ of hearing. Autonomic nervous system. Vertebrae. Skull. Respiratory system. Heart. Urogenital system. Nervous system - hemispheres.Skeleton of upper and lower limbs. Muscular system - muscles of the head, neck, trunk and extremities. PHYSIOLOGY: Physiology of blood (erythrocytes, leukocytes, trombocytes, haemocoagulation, blood groups, blood transfusion, basic blood examinations). Physiology of cardiovascular system	

(Physiology of the heart and vessels, basic clinical methods). Physiology of respiratory system (ventilation, mechanics of breathing, artificial ventilation, basic clinical methods). Physiology of gastrointestinal tract, metabolism and nutrition. Physiology of kidneys. Physiology of muscles. Thermoregulation. Physiology of nervous system, reflexes, pain, sleep, memory. Physiology of sensory organs, examination methods. Physiology of endocrine system.

MEDICAL BIOLOGY: The cell (definition, functional organisation). Proteins – primary, secondary and quaternary structure. Function of proteins in cell. Cell nucleus: nuclear envelope, chromatin – chromosomes, their structure. Structure of DNA and RNA. Genetic information. Gene. Membrane structures of the cell. Cytoskeleton. Mutations. Classification of mutations. Types of mutagens. Gene engineering and importance of molecular genetics methods for medicine, public health and new technologies of medicinal drugs production. Genetic screening, prenatal screening, screening of newborns and heterozygotes. Cell cycle. Meiosis – genetic importance. Basics of genetics: Mendel's laws. Population genetics: H-W law. Tasks.

COURSE DESCRIPTION

University: Comenius University in Bratislava

Faculty: Jessenius Faculty of Medicine in Martin

Course ID:
JLF.ÚLBch/J-1-PA-067/18

Course title:
Biochemistry

Educational activities:

Type of activities: practicals / lecture

Number of hours:

per week: 1 / 2 **per level/semester:** 15 / 30

Form of the course: on-site learning

Number of credits: 2

Recommended semester: 1.

Educational level: I.

Prerequisites:

Course requirements:

Assessment of students is in the form of an exam, minimum success rate: 60%.

Rating: A: 91-100%, B: 81-90%, C: 73-80%, D: 66-72%, E: 60-65%, FX: 59% and less

Learning outcomes:

At the end of the course the student obtains basic information about the course of processes in metabolism of substances not only in a healthy human organism but also in the body of patients, understanding the nature and mechanisms of changes, understanding biochemical parameters coming from clinical-biochemical laboratories

Class syllabus:

Organization and chemical composition of organisms - cell structure, chemical composition of cell - organic, inorganic substances, enzymes and coenzymes).

Intermediate metabolism - characteristics of metabolic processes, basics of bioenergetics. biological oxidation, metabolism of carbohydrates, lipids, amino acids, nucleotides, tetrapyrroles.

Genetic information - replication, transcription, translation.

Basics of metabolic regulation

Biochemistry of the gastrointestinal tract - oral cavity, stomach, pancreas, bile, small intestine, large intestine.

Liver biochemistry.

Kidney biochemistry.

Biochemistry of the nervous system - structure, metabolism, principles of nerve transmission, vegetative nervous system.

Biochemistry of the endocrine system acid-base balance

Blood plasma proteins

Preparation of biological material for biochemical examination. Biochemical composition of living systems and its importance for metabolism and clinical-biochemical diagnostics. Possibilities of determination of analytes, pH and minerals in biological fluids (blood, urine, cerebrospinal fluid ...)

Glucose testing. Diabetes mellitus and its laboratory diagnostics, glycosylated hemoglobin, ketone bodies.

Examination of lipid profile. Atherosclerosis and its laboratory diagnostics.

Examination of protein and non-protein nitrogenous substances. Urine examination for the presence of physiological and pathological components (glucose, proteins, ketone bodies, urobilinogen). Jaundice and its laboratory diagnostics
Examination of minerals and acid-base balance parameters. Enzymes in clinical-biochemical diagnostics

Recommended literature:

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Jessenius Faculty of Medicine in Martin	
Course ID: JLF.ÚLBf/J-1-PA-068/18	Course title: Biophysics and Radiology
Educational activities:	
Type of activities: practicals / lecture	
Number of hours:	
per week: 2 / 1 per level/semester: 30 / 15	
Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 2.	
Educational level: I.	
Prerequisites:	
Recommended prerequisites: Basic characteristics of the principles of biophysical process in the organism. Biophysical principles of diagnostics methods and terapeutics methods by ionizing and nonionizing radiation in medicine and nursing basic principles of protection counter ionizing radiation (limits, efective dose and personal dosimetry)	
Course requirements: Continuous assessment at practical sessions and seminars, final credit test.	
Learning outcomes: After competition of the subject Medical Biophysics and radiology, students are able to master the basic physical and physical-chemical processes in biological systems and human body. Students understand biophysical principles of physiological and pathological processes in humans at a level of a cell, tissues and the organ systems. They know and apply to practice the basic biological effects of physical factors affecting the human body and a protection against their harmful influences. They master the biophysical principles of medical instrumentation used in diagnostic and some therapeutical methods.	
Class syllabus: Structure and function of cell membrane. Transport mechanisms. The resting membrane potential. -The action potential, its origin and propagation. Synapse and synaptic transmission. -Biophysical principles of muscle contraction. Skeletal, cardiac and smooth muscle. Biophysical basics of respiration. External and internal breathing, ventilation, distribution, diffusion and perfusion. - Biophysics of the circulatory system. Heart as a force pump, structure, function, power output. - Laminar and turbulent blood flow - basic laws. Blood pressure. Capillary blood flow, filtration in capillary loop, oedema. -Biophysical mechanism of sensory perception. Biophysics of vision. Biophysics of hearing. -Recording of electrical and nonelectrical biosignals. -Interaction of mechanical and meteorological factors with living systems. -Interaction of electrical and magnetic fields and nonionising radiation with living systems. -Radioactivity and ionising radiation. -Origin of ionizing radiation and the interaction of ionizing radiation, radiological quantities and units. - Detection of ionising radiation. Interaction of ionising radiation with living systems. -X-ray imaging techniques. Imaging techniques using radionuclides. -Biophysical principles of some diagnostical and therapeutical methods in medicine.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Jessenius Faculty of Medicine in Martin	
Course ID: JLF.ÚPAs/J-1-PA-041/16	Course title: Childbirth Preparation and Parenthood (1)
Educational activities:	
Type of activities: practicals / lecture	
Number of hours:	
per week: 1 / 1 per level/semester: 15 / 15	
Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 3.	
Educational level: I.	
Prerequisites:	
Recommended prerequisites: Psychology I - 2; Midwifery I - 2;	
Course requirements: Evaluation of students is provided through running test and practical demonstration of the chosen topic, Minimal level to pass the subject: 60 %. Evaluation: A: 91–100 %, B: 81–90 %, C: 73–80 %, D: 66–72 %, E: 60–65 %, Fx: 59 % a menej. Scale of assessment (preliminary/final): 50/50	
Learning outcomes: The course includes knowledge and promotes development of abilities and gaining of skills in childbirth preparation and parenthood in clinical departments. After his completion student is able provide individualized nursing care to woman and family in childbirth preparation and parenthood. Student is able keep nursing techniques by accepted criterions of output and needs of woman in all age groups.	
Class syllabus: History of chidbirth preparation and parenthood.Goals of childbirth preparation childbirth and parenthood. Forms of childbirth preparation and parenthood.Methods of childbirth preparation and parenthood – Lamaze, Odent, Bradley, Kitzinger, Leboyer. Lectures of chidbirth preparation and parenthood 1 . - 12. week of gestation, 12. – 24. week of gestation, 24. – 36. week of gestation,36. week of gestation to labour.Lectures of chidbirth preparation and parenthood 1. stage of labour – physical, psychological and social changes. Lectures of chidbirth preparation and parenthood 2. stage of labour.Lectures of chidbirth preparation and parenthood 3. stage of labour.Lectures of chidbirth preparation and parenthood 4. stage of labour. Lectures of chidbirth preparation and parenthood stadium after labour and delivery.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Jessenius Faculty of Medicine in Martin	
Course ID: JLF.ÚLBL/J-1-PA-049/17	Course title: Clinical Genetics
Educational activities:	
Type of activities: lecture	
Number of hours:	
per week: 1 per level/semester: 15	
Form of the course: on-site learning	
Number of credits: 1	
Recommended semester: 5.	
Educational level: I.	
Prerequisites: JLF.ÚA/J-1-PA-001/15 - Anatomy and Physiology	
Course requirements:	
Scale of assessment (preliminary/final): 100 / 0	
Learning outcomes:	
During the course students obtain basic information about clinical genetics and its use in medicine. Students also gain knowledge about the human karyotype, distribution and nomenclature of human chromosomes, mutations and mutagenic agents, causes of mutations and their consequences, monogenic and polygenic inheritance, autosomal and gonosomal disorders, selected genetic diseases, their laboratory diagnostics, screening, prevention and treatment used in medical practice.	
Class syllabus:	
<ul style="list-style-type: none">• Human cytogenetics. Normal human karyotype and methods of its study. Cytogenetic nomenclature. Sex chromosomes and sex determination.• Chromosomal aberrations: origin, types, manifestations; chromosome aberrations as a cause of pathological conditions; chromosome variants. Chromosome instability syndromes. Chromosomal fragile sites.• Monogenic inheritance in humans. Nomenclature of human loci and alleles. Basic terms. Autosomal dominant inheritance in pedigrees and population. Autosomal recessive inheritance and its criteria; the effects of parental consanguinity; segregation analysis.• Inheritance of genes located on sex chromosomes. Mitochondrial inheritance. Examples of monogenic diseases.• Polygenic inheritance in humans. Gene interactions in humans. Polygenic inheritance of quantitative traits. Correlation between relatives. Heritability and coefficient of genetic determination: possibilities of human determination. Polygenic inheritance of qualitative traits: threshold model. Examples of polygenic inherited quantitative traits and diseases. Inheritance and environment: twin method.• Mutations and mutagenesis. Spontaneous mutations in humans. Mutation frequency and assay methods (direct and indirect); relation of frequency and the age of parents. Induced mutations and mutagenic agents. Methods for testing the mutagenic effect of environmental factors in humans. Mutations and Human Health. Mutagenesis and carcinogenesis. Oncogenes and tumor suppressor genes. Molecular basis of carcinogenesis.	

- Genetic polymorphisms in humans. Definition of genetic polymorphism. Origin of polymorphism in population. Types of polymorphisms: DNA polymorphism, protein polymorphism, isoenzymes, chromosome polymorphism, blood-group systems, HLA system. Practical use of genetic polymorphism. Genetic polymorphism in the study of human evolution.
- Genetics in medicine. Genetically determined pathological conditions: types, abundance in the population, contribution of the genetic component to morbidity and mortality. Participation of genetics in diagnosis, treatment, prevention and elucidation of etiology of human diseases. Genetic diagnostics, screening, carrier detection. Specific treatment of genetic disorders. Genetic counseling and prenatal genetic diagnostics.

Recommended literature:

Basic literature:

Ferák V., Sršeň, Š.: Genetika človeka. 2. preprac. vydanie. Slov. pedagogické nakladatel'stvo. Bratislava, 1990. Je to učebnica genetiky človeka, primárne určená pre študentov biológie. Prvé vydanie tejto knihy (z r. 1981) je už zastarané a nemožno ho doporučiť.
 Sršeň, Š., Sršňová, K.: Základy klinickej genetiky. 3. preprac. vydanie. Osveta, Martin, 2000. Je to učebnica, určená primárne študentom mediciny a lekárom. Dôraz je na opise geneticky podmienených patologických stavov.

Additional literature:

Jones, S.: Jazyk genu. Vyd. Paseka, Praha, 1996. Populárno-vedecká publikácia o genetike človeka, zameraná najmä na genetické aspekty ľudskej evolúcie. Preklad z angličtiny. Ridley, M.: Genom. Vyd. Portál, Praha, 2001. Vynikajúca popularizačná kniha o genetike človeka, ľudskom genóme a o funkcií niektorých významných a zaujímavých génov mimoriadne zasvätené a pútavo napísaná.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Jessenius Faculty of Medicine in Martin	
Course ID: JLF.ÚPAs/J-1-PA-029/15	Course title: Clinical Propedeutics
Educational activities:	
Type of activities: practicals / lecture	
Number of hours:	
per week: 2 / 2 per level/semester: 30 / 30	
Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 2.	
Educational level: I.	
Prerequisites:	
Recommended prerequisites: Anatomy and physiology	
Course requirements: The evaluation of students is in the form of the written final test, the minimum success rate: 60%. Evaluation: A: 91–100 %, B: 81–90 %, C: 73–80 %, D: 66–72 %, E: 60–65 %, Fx: 59 % and less. Scale of assessment (preliminary/final): 50/50	
Learning outcomes: The student is able to apply theoretical knowledge to the practical assessment of the general condition of the patient. He/she will be able to evaluate the basic anamnestic data and symptomatology of the disease, procedures of the physical examination of the particular body systems including the basic laboratory tests and to assess globally the patient condition focusing on the identification of cases requiring the urgent medical and nursing intervention. The student gains the essential practical skills in the clinical work and understands the necessity of the interdisciplinary and multidisciplinary teamwork. With the aim of the streamline and standardisation of the communication (critical) incidents in the clinical nursing practice, the student uses the structure communication method of SBAR.	
Class syllabus: Medical history collection (status praesens generalis), methodology and data recording Assessment and analysis of subjective and objective symptoms in a patient in internal medical disciplines Assessment and analysis of subjective and objective symptoms in a patient in surgical disciplines Examination body positions of the patient Physical examination of the patient - methodology of physical examination methods and recording of findings on the physical examination General examination of the patient - cephalocaudal procedure (status praesens localis) Examination methods (non-invasive, invasive) Admission, discharge, patient transfer Patient positions Assistance in the round and examination of the patient

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Jessenius Faculty of Medicine in Martin	
Course ID: JLF.ÚPAs/J-1-PA-031/16	Course title: Communication
Educational activities:	
Type of activities: practicals	
Number of hours:	
per week: 2 per level/semester: 30	
Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 3.	
Educational level: I.	
Prerequisites:	
Recommended prerequisites:	
Psychology I-1	
Course requirements:	
Assesment of student outcomes takes form of presentation of the essay and written test, minimum limit is: 60 %. Evaluation: A: 91–100 %, B: 81–90 %, C: 73–80 %, D: 66–72 %, E: 60–65 %, FX: 59 % and less	
Scale of assessment (preliminary/final): 0/100	
Learning outcomes:	
After completion of the subject the student obtains fundamental information about interpersonal communication and its significance in health-care professions. The student understands principles of professional interview, the importance of active listening and empathy; is able to identify and interpret contents of verbal and non-verbal communication. This course contributes to development of students' social skills. On the basics of the solution of model situations, student can adequately respond to the demands of patients, their family members, as well as co-workers and to deal with conflict situations and criticism.	
Class syllabus:	
- Introduction, aims of the course, the significance and specifics of communication in the health care professions.	
- Self-knowledge, methods of exploring and evaluation of others.	
- Social skills, presentation in public.	
- Ability of self- presentation, motivation and personality profile.	
- Nonverbal communication (nvk): components and importance of nvk in professional communication, interpretation of nvk, compliance and non-compliance of nvk and verbal communication.	
- Assertiveness in communication and it's development, manipulation.	
- Criticism, coping with the affective attack in communication.	
- Interview: types of interview, phases of professional interview, types of questions.	
- Active listening and empathy.	
- Group discussion, group decision-making and cooperation.	
- Conformity, dominance vs. obedience and power issues in communication.	

- Conflicts and their solution, prejudice in communication.
- Communication styles in conflict situations.
- Specifics of communication with selected groups of patients.

COURSE DESCRIPTION

University: Comenius University in Bratislava

Faculty: Jessenius Faculty of Medicine in Martin

Course ID: JLF.ÚHE/J-1-PA-005/15	Course title: Embryology
--	------------------------------------

Educational activities:

Type of activities: practicals / lecture

Number of hours:

per week: 1 / 1 **per level/semester:** 15 / 15

Form of the course: on-site learning

Number of credits: 2

Recommended semester: 1.

Educational level: I.

Prerequisites:

Course requirements:

- 93 percent of active participation on the practical sessions (one practicum can be excused for severe reasons).
- Oral final exam - two questions from human embryology (evaluated A – Fx).

Scale of assessment (preliminary/final): 20/80

Learning outcomes:

The students will study the miracle of the formation and development of the human body during the prenatal period. The goal is to provide students with an understanding of the principles of embryogenesis that can be used in the diagnosis, care, and prevention of birth defects.

Class syllabus:

- Gametogenesis.
- Fertilization, implantation.
- Formation of the blastocyst, development of the fetal membranes.
- Development of the placenta and blood circulation.
- Multiple pregnancies.
- Development of the amniotic and yolk sac.
- Notogenesis.
- Development of the germ disc and its differentiation.
- Development of the neck and face.
- Development of the gastrointestinal tract.
- Pharyngeal the arches, pouches, grooves.
- Development of the respiratory system.
- Development of the urogenital system.
- Development of the cardiovascular system and fetal blood circulation.
- Development of the nervous system.
- Development of the neural crest and its differentiation.
- Development of the skeletal system.
- Development of the skin.
- Growth of embryo and fetus.

Educational activities:	
Type of activities: practicals / lecture	
Number of hours:	
per week: 1 / 1 per level/semester: 15 / 15	
Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements:	
- it is obligatory to be present at practicals (1 absence is tolerated)	
- test during the semester (min. 60 %)	
Exam: End study evaluation of students is based on written exam – test. Minimal cut off level is 60%.	
Scale of assessment (preliminary/final): 0 % / 100 %	
Learning outcomes:	
The student receives information from bacteriology, virology, parasitology and mycology, about their structure, metabolism, pathogenic potential and pathogenesis of infectious diseases, genetics and antibiotics used for the treatment as well as methods of disinfection and prevention (vaccination included). The student is trained to use principal diagnostical procedures, understand their theoretical background, indication and interpretation. The student is able to manage the most common ways of sampling of infectious material, to process it for microscopy, cultivation, identification and ATB susceptibility and tools of pathogenicity testing. Theoretical knowledges are based on study of etiology of infections of systems.	
Class syllabus:	
Introduction to microbiology, Structure of bacterial cell, Physiology and metabolism of bacterial cell, Genetics of bacterial cell, .Antibiotics and resistance, Safety in microbiological laboratory,organization of study, Microscopy, Cultivation, inoculation, Identification of bacteria. Cultivation media. Anaerobic bacteria cultivation. ATB susceptibility testing, Taxonomy of bacteria, Bases of virology, parasitology, mycology, HIV and prions, Systemic diagnosis of infection ethiology

COURSE DESCRIPTION

University: Comenius University in Bratislava

Faculty: Jessenius Faculty of Medicine in Martin

Course ID:

JLF.KDD/J-1-PA-007/15

Course title:

Nutrition of a Woman, Newborn and Infant

Educational activities:

Type of activities: practicals / lecture

Number of hours:

per week: 1 / 1 **per level/semester:** 15 / 15

Form of the course: on-site learning

Number of credits: 1

Recommended semester: 2.

Educational level: I.

Prerequisites:

Recommended prerequisites:

patient needs and nursing process

Course requirements:

90% attendance at lectures

90% participation in practical exercises

Scale of assessment (preliminary/final): final test

Learning outcomes:

The student will acquire basic information about the particular nutrition of children, about the composition and importance of breast milk, about the composition of substitute milk formulas and indications of their use, about nutrition of physiological and pathological newborns. They will learn the technique of breastfeeding, and storing breast milk.

Class syllabus:

Nutrition in particular periods of pregnancy, food pyramid. Eating in pregnancy, nursing process.

Breast milk, its composition and comparison with cow's milk

The importance of breastfeeding and its contraindications by mother and child. Drugs, addictive substances, drugs and breastfeeding.

Nutritional need for a newborn and a premature baby. Natural nutrition of the newborn, low birth weight newborn.

Basics of parenteral nutrition of a newborn, its indications and complications.

Preparations of substitute infant formula, initial and follow-on milk, dietetic formulas, antireflux and hypoallergenic milk, prebiotics, probiotics, symbiotics.

Baby nutrition in the first year of life: natural nutrition, milk substitute, non-milk supplements and infant beverages. Infant nutrition in some selected pathological conditions.

COURSE DESCRIPTION

University: Comenius University in Bratislava	
Faculty: Jessenius Faculty of Medicine in Martin	
Course ID: JLF.ÚPF/J-1-PA-008/15	Course title: Pathological Anatomy and Pathological Physiology
Educational activities:	
Type of activities: practicals / lecture	
Number of hours:	
per week: 1 / 2 per level/semester: 15 / 30	
Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 2.	
Educational level: I.	
Prerequisites:	
Course requirements: Assessment of students is carried out in the form of written examination, minimum passing score is 60%. Assessment scale: A: 91–100 %, B: 81–90 %, C: 73–80 %, D: 66–72 %, E: 60–65 %, FX: 60 % and less.	
Learning outcomes: After completion of the subject the student understands the basic morphological and functional manifestations of diseases, etiopathogenesis, pathomechanisms involved in symptoms and signs of disease development, biopsy and the other pathological diagnostic methods.	
Class syllabus: Introduction to pathological anatomy and pathological physiology, etiology and pathogenesis. Inflammation. Immunopathological processes. Neoplasia, benign and malignant neoplasms and their characteristic. Pathophysiology of pain. Stress. Pathophysiology of shock. Disturbances of homeostasis - fluid and electrolyte balance disturbances and assessment, acid-base balance disorders. Diabetes mellitus. Pathology and pathophysiology of ischemic heart disease. Pathophysiology of arterial hypertension. Pathophysiology of heart failure. Disturbances of arterial and venous system function in lower extremities Pathology and pathophysiology of the gastrointestinal tract and peritoneum. Pathology and pathophysiology of the most important respiratory diseases. Functional consequences of the most important respiratory diseases, respiratory failure. Pathology and pathophysiology of the most important urinary tract diseases, clinical syndromes in renal diseases, acute and chronic renal failure. Pathology and pathophysiology of the most important central nervous system disorders.	

Pathology of blood.

Pathology of male and female reproductive systems, pathological states associated with pregnancy.

Pathology of female reproductive system.

Gestation period pathology: pathology of placenta and umbilical cord. Abortion.

Growth and differentiation disorders (fetus hypotrophy, classification of congenital developmental disorders - malformations and deformities).
