COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Evangelical Lutheran Theological Faculty	
Course ID: EBF/E-003/15	Course title: Introduction to Logic
Educational activities: Type of activities: seminar Number of hours: per week: 2 per level/semester: 28 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 1., 3., 5., 7., 9.	
Educational level: I.II., II.	
Prerequisites:	
Course requirements: Students will write five tests on an ongoing basis. They will be graded on a scale from A to F. The indicative grading scale is A 90%, B 80%, C 70%, D 60%, E 50%. Students need to score at least half of the maximum marks on each test. Otherwise, no credit will be awarded. Students may retake each test a maximum of two times. Each student is allowed to be absent without giving a reason for at most one seminar. Absence from more than one seminar must be justified and backed up, e.g. by a medical certificate. If the seminar does not take place due to extraordinary reasons, it will be substituted on another date as agreed. Such reasons do not include study leave granted by the Rector of the University or the Dean of the Faculty, nor do they include the possible absence of the lecturer due to sick leave.	
Learning outcomes: The goal of this course is to introduce Protestant theology students to the fundamentals of logic that are relevant to theology. Attention will be given to two classical logical systems, propositional and predicate logic. In addition, we will formulate some important fragments of the so-called Aristotelian subject-predicate logic. Upon completion of the course, the student will acquire a basic knowledge of selected concepts in logic and methodology of the sciences, along with their application to a specific historical period. The knowledge thus acquired will enable him/her to apply the relevant concepts in his/her further studies, especially in the fields of systematic theology, church history, or the history of dogma and philosophy of religion.	
Class syllabus: I. Introduction: Competencies of logic - reasoning and argument, the concept of inference, the subject of logic, natural and formal languages, basic logical principles. One test. II. Aristotelian subject-predicate logic and categorical syllogism: Subject-predicate structure of propositions, quantity and quality of propositions; logical square - contrariety, contradiction, subcontrariety, subsumption (subalternation). Figures and valid modes of categorical syllogism - Venn diagrams, proofs in Boolean algebra (in the language of set theory), examples of judgements in natural language. Two tests. III. Propositional calculus: Definition of the system of propositional calculus - syntax and semantics of the language of propositional calculus; propositional conjunctions: negation, conjunction,	

disjunction, implication, equivalence. Propositional conjunctions in natural language: and; not true that, if - so; if; then, when; or; either - or; then and only if; only if; unless; except if; else; neither - nor. Tabular method - tautologies, contradictions, neutral formulas. Propositional-logical inference. Arguments and their analysis from the point of view of propositional calculus. Natural deduction for propositional calculus. Basic and some derived transformation rules. Proof in the system of natural deduction: direct and indirect proof. One test.

III. First-order logic: Definition of the system of first-order logic - predicates, individual expressions, quantifiers and individual variables. Syntax and semantics of first-order logic. Natural language and first-order logic - individual and categorical propositions. Natural deduction for predicate logic. Basic and some derived transformation rules. Proof in the system of natural deduction. One test.
