When logging in to MS Teams, it is necessary to use the university e-mail address in the form of the surname number@uniba.sk and join the team FMUK_Mathematics_1_English using the code: ny4mn13. All study materials will also be published here. The student is obliged to listen to the lecture before the exercises and online consultation. According to the schedule, online consultations with the lecturer will be included. Students registered for the course will receive invitations to their calendar for regular online consultations. If they did not understand something in the lecture, they can add questions to the lecture before the online consultation in MS Teams. These will be answered during the online consultation by the lecturer. It is necessary to mention a specific problem that they did not understand. Exercises are mandatory, they will take place according to the valid schedule, either in person or in case of worsened epidemiological situation online. Individual students are firmly assigned to groups. It is not allowed to exchange in groups. Course evaluation during the semester: 1.) 5 min. test during online consultations, each for 1 point (min. 10 tests the student should take) (min. 10 tests the student should take, we take into account 2 possible absences) (10 points), without the possibility of writing a substitute test. 2.) 10-min. test at seminars, each for 2 points (min. 8 tests the student should pass, we take into account 2 possible absences) (16 points), without the possibility of writing a substitute test. 3.) 2 written works in the middle and at the end of the semester for 12 points (max. 24 points). The test can be taken in an alternate period during the semester, if the student proves his / her absence by a confirmation from a doctor. Assessment of the subject during the trial period: The final written examination at the exam lasts 80 minutes, consists of 5 examples (2 from linear algebra and 3 from mathematical analysis). (max. 50 points)	

Exam: a student can complete 1 regular and one corrective term if he / she does not reach the required number of points to complete the course on the regular term. The dates will be year-round and will be published well in advance and taking into account the epidemiological situation.

During the tests, the student will log in to the MS Teams application, have a microphone, camera and will perform a test in the Moodle system.

The student completes the course if he / she obtains at least 60% of points (ie 30 points) from the continuous assessment, so that he / she can go to the exam and min. 60% of the exam points (ie 30 points) to pass the exam. The points that the student obtains during the semester and in the exam are included in the final grade of the subject.

Before solving the exam test, student must be logged in to the MS Teams application, have a microphone and camera switch on. Student is performing the exam test in the Moodle system. Student writes the solution by hand on paper, continuously is inserting own solution into the Moodle system while checking the compliance of its solution on paper with what it enters into the system. When the exam test is closed, the signed handwritten solution will be photographed or scanned together with student card (ISIC) and putted into the Moodle system. The student is obliged to have ensured a functioning internet connection during the exam tests.

Learning outcomes: This course is a continuation of Mathematics I and gives students the possibility to gain mathematical skills in solving optimization problems. In many economic applications, a manager deals with situations where several variables have to be included into the mathematical model, e.g. usually the output depends on a set of different input factors. Therefore, this course deals with optimization problems for functions depending on more than one independent variable. Students will solve some real problem using software Wolfram Mathematica.																							
Class syllabus: Functions of several variables: partial derivatives, gradient, total differential, competitive and complementary products. Unconstrained and constrained optimization: optimality conditions, Lagrange multipliers, Kuhn-Tucker conditions. Linear programming: simplex methods, duality, sensitivity analysis. Integer linear programming.
