TABLE OF CONTENTS

1. 161APE/21	Analysis of Credit Risks of Financial Portfolios.....	2
2. 160APE/21	Analysis of Markets Risk of Financial Portfolios.....	3
3. 269APE/21	Business Analytics and Business Processes Modeling.....	4
4. 270APE/21	Business Analytics and Business Processes Modeling.....	7
5. 020APE/21	Communication Techniques in Marketing.....	10
6. 100APE/21	Data Modeling in Management.....	12
7. Diz10/16	Dissertation Examination (state exam).....	14
8. O3/11	Dissertation Thesis Defence (state exam).....	15
9. 018APE/21	Economics I.....	16
10. 019APE/21	Economics II.....	18
11. 069APE/21	Entrepreneurship and Management of Small and Medium-Sized Enterprises.....	20
12. 034APE/21	Financial Accounting.....	22
13. 029APE/21	Financial Investment.....	24
14. 017APE/21	Human Resources Management.....	26
15. 023APE/21	International Human Resource Management.....	28
16. 055_APE/21	Knowledge Management.....	29
17. 068APE/21	Management.....	31
18. 024APE/21	Management Information Systems.....	32
19. 014APE/21	Managerial Ethics.....	33
20. 056APE/21	Market Research.....	35
21. 014APE/21	Marketing.....	36
22. 016APE/21	Operations Management and Logistics.....	37
23. 040APE/21	Organizational Behavior.....	40
24. 004P/20	Own Pedagogical activity.....	42
25. MP_APE/21	Project Management.....	43
26. 002P/18	Publications, participation in conferences, teaching, projects solving etc.....	45
27. 265APE/21	Research Methodology and Paper Writing I.....	46
28. 266APE/21	Research Methodology and Paper Writing II.....	47
29. 267APE/21	Service Analytics and Service Systems Modeling.....	48
30. 268APE/21	Service Analytics and Service Systems Modeling.....	51
31. 117APE/21	Statistics.....	54
32. 057APE/21	Strategic Information Systems.....	56
33. 033APE/21	Strategic Management.....	57
34. 012APE/21	Tax systems.....	58

COURSE DESCRIPTION

Academic year: 2021/2022						
University: Comenius University Bratislava						
Faculty: Faculty of Management						
Course ID: FM.KKM/161APE/21		Course title: Analysis of Credit Risks of Financial Portfolios				
Educational activities: Type of activities: lecture Number of hours: per week: per level/semester: 32s Form of the course: combined						
Number of credits: 8						
Recommended semester: 3., 4..						
Educational level: III.						
Prerequisites:						
Course requirements:						
Learning outcomes:						
Class syllabus:						
Recommended literature:						
Languages necessary to complete the course:						
Notes:						
Past grade distribution Total number of evaluated students: 0

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KIS/269APE/21	Course title: Business Analytics and Business Processes Modeling
Educational activities: Type of activities: seminar Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 4., 6.	
Educational level: III.	
Prerequisites:	
Recommended prerequisites: EXPECTED KNOWLEDGE THE STUDENT IS REQUIRED TO HAVE Basic understanding of processes, models and statistical methods. Working with MS Office, Teams. Skills to work with literature sources.	
Course requirements: To be able to perform business analytics using well known software tools and to be able to model different kinds of business processes. Scale of assessment (preliminary/final): 0 / 100%	
Learning outcomes: STATEMENT OF COURSE OBJECTIVES a) To assist students in understanding the issues and problems in modelling, prioritization, competency, assessment, and evaluation of analytical models. b) To enable students to learn the modelling of business processes, describing them with the use of BPMN. c) To prepare students for participation as users or managers in the modeling of business processes and simulation of their behavior. d) To assist students in research of the latest trends of business process analytics and modeling giving them necessary mathematical and analytical tools and methods.	
Class syllabus: COURSE DESCRIPTION The course concentrates on analytics of business processes. This course is built on the previous courses of management, statistics, ... It develops analytical skills in modelling, prioritization, competency, assessment, and evaluation of analytical models. It lays the foundation of the business process modelling, orchestration, choreographies and explaining the architecture and methodology. It explains the evolution of enterprise system architecture, describes processes in standard BPMN notation and highlights the typical architectures and methodologies. This course provides the student with the knowledge and skills necessary to understand and use information technology to in depth analyze and model business processes with all interactions with the environment. The	

necessary mathematical tools are discussed in the last part as such as Stochastic Decision-Making Models, Mathematical Programming Models, Multi-Attribute Decision-Making, Modeling with Game Theory, Regression, Discrete Dynamical Systems Models, Simulation modelling and others. This course provides the students with the knowledge and skills necessary to understand and use information technology to analyze and model business processes effectively and shows how business process analytics provides organizations with a strategic competitive advantage.

SCHEDULE

Lecture 1 Business Analytics Model

Lecture 2 Business Analytics at the Strategic Level and Functional Level

Lecture 3 Business Analytics at the Analytical Level and Data Warehouse Level

Lecture 4 Structuring Business Analytics Competency, Assessment and Prioritization

Lecture 5 BP Foundation

Lecture 6 Evolution of Enterprise Systems Architectures

Lecture 7 Business Process Modelling

Lecture 8 Process Orchestrations and Modelling

Lecture 9 Process Choreographies and Properties

Lecture 10 Architectures and Methodologies

Lecture 11 Introduction to Mathematical Modeling for Business Analytics

Lecture 12 Introduction to Stochastic Decision-Making Models for Business Analytics

To be able to benefit fully from each class, it is important to read the scheduled chapters and prepare the assigned Case Problems.

The general format of each class will be:

- review of assigned reading and discussion
- lectures interspersed with group and class discussion of relevant case studies
- class review of term projects
- online using MS Teams, otherwise on site if pandemic situation permits

Recommended literature:

COURSE DESCRIPTION

Academic year: 2021/2022						
University: Comenius University Bratislava						
Faculty: Faculty of Management						
Course ID: FM.KMk/020APE/21		Course title: Communication Techniques in Marketing				
Educational activities: Type of activities: Number of hours: per week: per level/semester: Form of the course: combined						
Number of credits: 8						
Recommended semester: 3., 4., 5., 6..						
Educational level: III.						
Prerequisites:						
Course requirements:						
Learning outcomes: Understanding basic communication techniques in marketing.						
Class syllabus: Social Communication. Communication as the professional skills of marketing managers. Communication techniques of the manager in business negotiation and negotiation. Techniques of persuasion. Communication techniques in lobbying. World, Europe and us. Intercultural differences in communication techniques in marketing. Marketing and marketing in the global world. The essence of communication with the public. Application of communication principles of PR in internal and external communication. Applying communication skills to the manager in marketing. Blogs, press conferences, events, marketing by oral submission. Sales skills of managers. Customer communication. The essence of neuromarketing. Guerrilla marketing techniques. Communication of guerrilla marketers.						
Recommended literature: Keller, K. L., & Kotler, P. (2016). Marketing management. Pearson. Kotler, P., & Keller, K. L. (2012). Marketing management . New Jersey, US: Pearson Education.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KKM/100APE/21	Course title: Data Modeling in Management
Educational activities: Type of activities: lecture Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 3., 4..	
Educational level: III.	
Prerequisites:	
Course requirements: Students will prepare a project within which they will perform a separate data analysis, including its evaluation. Scale of assessment (preliminary/final): 100/0	
Learning outcomes: The course provides students with the opportunity to develop their skills of analysis of cross-sectional, panel or. time data based on the use of modern statistical methods. Students process data using IBM SPSS software, Wolfram Mathematica, SAS, etc.	
Class syllabus: Probability distributions of one and more random variables. Simulation of one and multidimensional random variable values. Sample selection by stratification, clustering, bootstrap. Creating a sample from a given distribution, point and interval estimates (method of moments, method of maximum likelihood). Linear regression models, OLS, GLS. Logistic regression. PCA, factor analysis. Multidimensional regression method. Two-factor ANOVA. Bayesian estimates, decision trees. Markov chains. Stochastic processes, random walk model and market efficiency. Autoregressive models. Cointegration. Heteroskedastic conditioned models.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KEF/018APE/21	Course title: Economics I
Educational activities: Type of activities: lecture Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 1.	
Educational level: III.	
Prerequisites:	
Course requirements: In order to pass the course active participation on lectures is needed and individual assignment “on a topic” need to be presented. Concrete information about the assignment and date of presentation will be precised at the beginning of term. Scale of assessment (preliminary/final): 50% active participation on lectures / 50% individual assignment	
Learning outcomes: This course provides an introduction to microeconomic theory designed to meet the needs of students in economy and management Ph.D study program. Some parts of the course are designed to teach material that all graduate students should know. Other parts are used to introduce superstructure to the known knowledge. Some topics of recent interest may also be covered.	
Class syllabus: Introduction to the course Microeconomics - Consumer theory - Preferences; Indifference curves; Utility; Consumer surplus; Budget constraints, Optimalization... The Market Forces: Demand and Supply - Concept of Market, Demand Side, Demand Function, Shifts in Demand Curve, Supply Side of the Market, Shifts in Supply Curve, Market Equilibrium Elasticity of Demand and Supply - Elasticities of Demand, Price Elasticity of Demand, Slope of Demand Curve and Price Elasticity, Determinants of Price Elasticity, Other Elasticities of Demand, Price Elasticity of Supply Decision making in different conditions - Uncertainty, Time, Welfare, externalities, imperfect information Behavior of a firm under conditions of perfect and imperfect competition (1) - Basic assumptions of firm analysis. Firm cost in short-run and long-run. Firm revenue and revenue curve. Volume of production of a perfectly competitive firm. Market structure. Perfect and imperfect competition. Reasons of market imperfections. Equilibrium under perfect competition. Behavior of a firm under conditions of perfect and imperfect competition (2)	

- Equilibrium in various forms of imperfect competition – monopoly, oligopoly and monopolistic competition. Public policy and antitrust regulation. Inefficiency of monopoly as a reason of regulation. Markets of production factors - Markets of production factors (labor, land and capital market). Demand of firms for production factors as a derived demand. Demand for production factors in profit maximizing firms. Demand and supply determination of prices of production factors Q&A session Presentations - Individual assignments

Some parts of the course are designed to teach material that all graduate students should know. Other parts are used to introduce superstructure to the known knowledge. Some topics of recent interest may also be covered.	
Class syllabus: Introduction to the course Introduction to Macroeconomics - Measurement of economic productivity and its indicators: GNP, GDP, NNP, NDP, NI, NEW Money and its role in the economy. Inflation as a macroeconomic problem a/ Money – concept, function, forms. Mechanisms of money creation; Equilibrium on the money market and the LM curve b/ Inflation: - Concept of inflation and problems with its measurement. Core and net inflation - Inflation and its forms from the perspective of causes, effects and impact - Approaches to its solution – deflation and costs of disinflation Labour market (1) a/ supply and demand on labour market, differences to other goods markets b/ is labour market close to perfect competition? c/ Inverse labour supply curve d/ labour market structure, employment, unemployment, rates IS-LM-PC model	

- relationship of inflation and unemployment – Phillips curve - relationship of unemployment and economic growth – Okun’ s law - IS-LM-PC model --- Equilibrium on the goods market and the IS curve. Equilibrium on the money market and the LM curve. Equilibrium on the Labour market and the PC curve. - State economic policy and its impact on macroeconomic equilibrium – IS-LM-PC model, short-run and medium run time horizon Labour market (2) Economic growth - do economies have long term growth? - the effect of savings on long term growth Solow-swan model, Lucas' model, AK model inequalities Q&A session Students’ presentations - There will be 2 sessions, each lead by one of the teachers. Students are asked to prepare presentation based on the announced Assignment

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KSP/069APE/21	Course title: Entrepreneurship and Management of Small and Medium-Sized Enterprises
Educational activities: Type of activities: seminar Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 3., 4., 5., 6..	
Educational level: III.	
Prerequisites:	
Course requirements: Seminar work: either a/ scientific seminar work (cca 20 pages) based on the selected topic from the studied areas of the course prepared based on the structure of this type of work: Introduction, Theoretical Overview, Methodology, Results, Conclusion. or b/ case study focused on the selected area of the entrepreneurship or SME management. Scale of assessment (preliminary/final): 100/0	
Learning outcomes: Obtaining the newest theoretical knowledge from the field of management and SME. Critical analysis of the current status of entrepreneurship with impact on inclusive entrepreneurship in global environment. Practical application of the obtain knowledge in the process of the case study creation.	
Class syllabus: 1. Introduction to the course and scientific discipline of entrepreneurship and small and medium size companies (SME). 2. Research methodology in the entrepreneurship and SME. 3. Theories of entrepreneurship and entrepreneurial activity. 4. Entrepreneurship as a process. 5. Key factors that influence entrepreneurial activity of individuals. 6. Inclusive entrepreneurship. 7. SME, their definition and role at the country's economy. 8. Financing and SME resources. 9. The key SME strategies. 10. Start-ups. Key characteristics and phases of development and their building. 11. Start-ups financing according to start-up life cycle phases. 12. The newest trends in entrepreneurship.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KSP/016APE/21	Course title: Operations Management and Logistics
Educational activities: Type of activities: seminar Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 3., 4., 5., 6..	
Educational level: III.	
Prerequisites:	
Recommended prerequisites: Completed course on Management	
Course requirements: The evaluation consists of two parts: (1) active participation 20%, (2) project 80%. The overall evaluation is in accordance with the faculty evaluation system: A = 91-100%, excellent; B = 81-90%, very good; C = 73-80%, good; D = 66-72%, satisfactory; E = 65-60%, sufficient; FX = 0-59%, insufficient.	
Learning outcomes: The course Operations Management and Logistics provides students of the doctoral's degree with knowledge from two areas, they closely correlate, management of production system and management of material flow. After successful completion of the course student will be able to: • Understand the importance and functions of operations management and explain the basic managerial terms and processes. • Apply systemic, professional, and creative approach to identify and address the problems and challenges in productivity improvement. • Understand the role of software systems for production planning and control. • Understand the core concepts of digital manufacturing and digital twin. • To apply principles of sustainable manufacturing. • Understand the importance and functions of logistics and supply chain management. • Understand the principles of purchasing, procurement, and sourcing in logistics. • Analyze the inventory and warehouse management systems. • Describe the new approaches in logistics transportation systems. • Describe new approaches to the use of information and communication technologies in logistics within the new direction of Logistics 4.0.	
Class syllabus: 1. Characteristics of operations management and effective production system 2. Productivity management 3. ERP a MES systems	

4. Digital production system and digital twin
5. Sustainable production system
6. Characteristics of logistics and supply chain management
7. Procurement and purchasing
8. Inventory management
9. Warehouse management
10. Logistics transportation systems
11. Information and communication systems in logistics

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KMn/040APE/21	Course title: Organizational Behavior
Educational activities: Type of activities: lecture Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 3., 4..	
Educational level: III.	
Prerequisites:	
Course requirements: 70% – Case study CS will be distributed to students by the lecturer. Execution of this task involves written solution of the given CS. Prescribed structure of the CS paper: 1. Short summary of the situation described in the CS 2. Identification of the main problems that need managerial attention and action 3. Description of the proposed changes that can solve the identified issues in the company 4. Executive summary, linking the suggested changes with relevant theoretical arguments (“back to theory” approach) 30% – Short paper Paper on a selected concept from Organizational behavior (topic to be discussed with the lecturer). Five pages (excl. references). Summative theoretical overview and related critical analysis of the given concept. Scale of assessment (preliminary/final): 100 / 0	
Learning outcomes: The course strengthens the ability of critical reflection and analysis of theoretical concepts in the field of OB. It leads students to apply theoretical knowledge in solving real organizational problems that managers face. It develops the managerial and leadership potential of students and the ability to solve problems related to people management and achieving organizational goals.	
Class syllabus: 1. Introduction to OB. 2. Research methods utilized in OB. 3. Culture and human behavior. 4. Individual behavior. 5. Motivation at work. 6. Group behavior. 7. Learning organization. 8. Leadership. 9. Acquiring and using power.	

10. Negotiation.
11. Communication.
12. Change management.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KIS/267APE/21	Course title: Service Analytics and Service Systems Modeling
Educational activities: Type of activities: seminar Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 3., 5.	
Educational level: III.	
Prerequisites:	
Recommended prerequisites: -	
Course requirements: To be able to perform service analytics using well known software tools and to be able to model different kinds of service processes. Scale of assessment (preliminary/final): 0 / 100%	
Learning outcomes: Course Description and Objectives At large, the term “services” is associated with Web services and alike. However, there is a much vaster layer to be considered within the remarkable growth of the service sector, which has come to dominate business activity in most advanced economies over the last decades. Besides, the opportunity to innovate in services, to realize the business and societal value from knowledge about service, to research, develop, and deliver new information services and business services increases continuously. Making up a significant part of the world economy, the service sector is a rapidly evolving field that is relied on to dictate the public's satisfaction and success in various areas of everyday life, from banking and communications to education and healthcare. Accordingly, the objective of the course of is to provide students of the service-related disciplines with the qualitative and quantitative skills necessary to model key decisions and performance metrics associated with services, including the management of resources, distribution of goods and services to customers, and the analysis and design of service systems. This course covers several aspects including: service systems, modeling, innovation, and service-oriented architectures. The course will investigate also the nature of services, the need for interdisciplinary approaches to services innovation, and the technology and tools needed to provide services innovation. At the end of this course, students will be able to: • understand and critique the ways in which researchers and practitioners are defining services and SA; • articulate the motivation behind the study of SA and relate their own experiences to the study of it; • apply theories that are emerging in the area of SA and identify current limitations in applying	

those theories;

- identify the multidisciplinary aspects of research projects;
- demonstrate ways in which organizations are changing what they do through innovative uses of service-oriented technologies and discuss the implications of these changes;
- evaluate ways in which social computing technologies are providing innovations in services (specifically in providing greater opportunities for co-production);

describe and discuss the general notion of service-oriented architecture and how its techniques can be used to architect services.

Class syllabus:

Part 1: What are Services? - This part focuses on introducing a comprehensive set of definitions of services. It includes materials that provide early definitions and thoughts on services. This survey of services is meant to provide some context around the burgeoning study of services and impact on modern economies.

Part 2: Management of Services / Service Level Management - The focus of this part is to introduce students to the notions about what differs in the management of services versus traditional operations or manufacturing management, namely:

- creating a services strategy and the unique aspects of services management planning;
- competitive role of information in services development;
- process analysis;
- diverse marketing&management challenges in services.

Part 3: Productivity and Innovation - This part is the foundation for uncovering different types of service innovation opportunities. It aims to gain a frame of reference about productivity conundrums, develop a point of view and be able to discuss this with others. It also considers the issue - what are the relationships between innovation and productivity.

Part 4: Service Engineering and Systems - This part focuses on the general description of systems and their relevance to services. Services can be viewed as socio-technological systems and differ somewhat from a manufacturing system or economic system. All three systems include elements, interconnections, attributes, and stakeholders. These components can be represented by an input, throughput, output process model where, in a services system there is a feedback loop that defines a service engagement.

Part 5: Service Science and Modeling - This part includes specific considerations for the use of methods in the services lifecycle from engagement through solutions design and delivery. The primary context for the discussions in this part is an IT services business. The part-5 depends on the students to have an understanding of today's increasing globalization of business and familiarity with the "What are Services". The queuing theory methods as well as techniques in optimization and adaptive decision-making will be introduced.

Part 6: Services and Software Architectures Infrastructure and Engineering - The Internet-based economy is gearing towards the real world of fully automated business processes. Automated services have emerged as the next generation of Web based technology for exchanging information over the Internet and promise to revolutionize the process of developing and deploying distributed software applications. Service Oriented Architecture is a logical way of analyzing and designing a software system to provide services to either end-user applications or to other services distributed in the Internet, via published and discoverable interfaces. The objective of this part is to present the principles and fundamental underpinnings of Web Services and Service Oriented Architectures, concentrating on service analysis and design.

Part 7: Service Economics - This part covers service description and structuring as well as the financial evaluation and economic planning behind the services provided. This includes the following topics:

- service portfolio management;
- service level management;

- planning and calculation;
- costing and charging.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KKM/117APE/21	Course title: Statistics
Educational activities: Type of activities: lecture Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 4.	
Educational level: III.	
Prerequisites:	
Course requirements: Student prepares project. There are 4 possibilities 1. Student prepares case study based on Real Estate.xlsx file (processing of real data in selected statistical software using adequate statistical methods) or 2. Student prepares case study base on Fitness analysis.csv file (questionary file) or 3. Student prepares case study base on own data (questionary file) or 4. Student prepares literature review of the papers which have used statistical analyzes and solve similar topic as is his PhD topic. Student chooses 1 possibility and prepare your case study or literature review to obtain evaluation. Scale of assessment (preliminary/final): 100% project	
Learning outcomes: Students will be able to analyze real data using the selected statistical methods using appropriate software, IBM SPSS, Wolfram Mathematica, etc. and to apply them in management, focusing on data processing of managerial practice.	
Class syllabus: Descriptive statistics. Probabilistic distributions of one and multivariate random variables. Random choice. Create a sample from a given distribution. Interval estimates, hypothesis testing - parametric, non-parametric, bootstrap. Analysis of dependence of random variables of different types. Pivot tables. ANOVA one and two factor. Linear regression models, OLS. Multivariate regression method. Modeling of trend and time series. Modeling of stationary time series, ARIMA models, estimation of model parameters, selection of suitable model. Data analysis using IBM SPSS, SAS, R, respectively Wolfram Mathematica. Working with real data - evaluation of questionnaires, or verification of economic, marketing and financial models based on real data.
