TABLE OF CONTENTS

1. 1-PMA-912/15 BSc Seminar.....	3
2. 1-PMA-991/15 BSc Thesis Defense (state exam).....	5
3. 1-PMA-510/00 Basics of Mathematical Statistics.....	6
4. 1-AIN-407/15 Brain and Mind.....	7
5. 1-AIN-408/15 Cognitive Laboratory.....	8
6. 1-PMA-750/00 Computer Data Analysis.....	9
7. 1-PMA-730/00 Computer Statistics.....	10
8. 1-PMA-741/00 Demography Statistics.....	12
9. 1-MAT-140/00 Discrete Mathematics (1).....	14
10. 1-MAT-725/00 Discrete Mathematics (2).....	16
11. 1-EFM-380/00 Econometrics.....	18
12. 1-EFM-120/17 Economics (1).....	20
13. 1-EFM-140/17 Economics (2).....	22
14. 1-MXX-233/13 English Conversation Course (1).....	23
15. 1-MXX-234/13 English Conversation Course (2).....	25
16. 1-MXX-131/00 English Language (1).....	27
17. 1-MXX-132/00 English Language (2).....	29
18. 1-MXX-231/00 English Language (3).....	31
19. 1-MXX-232/10 English Language (4).....	33
20. 1-PMA-210/00 Financial Mathematics (1).....	35
21. 1-PMA-220/00 Financial Mathematics (2).....	37
22. 1-MXX-141/00 French Language (1).....	39
23. 1-MXX-142/00 French Language (2).....	40
24. 1-MXX-241/00 French Language (3).....	41
25. 1-MXX-242/00 French Language (4).....	42
26. 1-PMA-530/00 General Insurance Theory.....	43
27. 1-MXX-151/00 German Language (1).....	45
28. 1-MXX-152/00 German Language (2).....	46
29. 1-MXX-251/00 German Language (3).....	47
30. 1-MXX-252/00 German Language (4).....	48
31. 1-PMA-911/15 Individual Work on BSc Thesis.....	49
32. 1-PMA-961/15 Insurance and Financial Mathematics (state exam).....	50
33. 1-PMA-310/00 Insurance Mathematics (1).....	51
34. 1-PMA-320/00 Insurance Mathematics (2).....	53
35. 1-MXX-491/15 Integrated Education of People with Disabilities.....	55
36. 1-EFM-511/15 Introduction to University-level Mathematics (1).....	56
37. 1-EFM-512/15 Introduction to University-level Mathematics (2).....	58
38. 1-AIN-406/15 Language and Cognition.....	60
39. 1-PMA-710/15 Legislation and Accountancy of Insurance Companies.....	61
40. 1-MAT-120/15 Linear Algebra and Geometry (1).....	63
41. 1-MAT-160/15 Linear Algebra and Geometry (2).....	65
42. 1-MAT-191/00 Linear Algebra and Geometry Classes (1).....	67
43. 1-MAT-192/00 Linear Algebra and Geometry Classes (2).....	69
44. 1-MAT-110/00 Mathematical Analysis (1).....	71
45. 1-MAT-150/00 Mathematical Analysis (2).....	73
46. 1-EFM-210/00 Mathematical Analysis (3).....	75
47. 1-EFM-250/00 Mathematical Analysis (4).....	78

48. 1-MAT-710/00	Mathematical Analysis Classes (1).....	80
49. 1-MAT-720/00	Mathematical Analysis Classes (2).....	82
50. 1-EFM-530/00	Mathematical Analysis Classes (3).....	84
51. 1-EFM-540/00	Mathematical Analysis Classes (4).....	86
52. 1-PMA-215/15	Matrix Algebra for Statisticians.....	88
53. 1-PMA-540/00	Models in Health Insurance.....	90
54. 1-MAT-240/00	Numerical Mathematics (1).....	92
55. 1-MXX-110/00	Physical Education and Sport (1).....	94
56. 1-MXX-120/00	Physical Education and Sport (2).....	96
57. 1-MXX-210/00	Physical Education and Sport (3).....	97
58. 1-MXX-220/00	Physical Education and Sport (4).....	98
59. 1-MXX-310/00	Physical Education and Sport (5).....	99
60. 1-MXX-320/00	Physical Education and Sport (6).....	100
61. 1-PMA-551/14	Probability Distributions.....	101
62. 1-PMA-520/00	Probability Theory (1).....	102
63. 1-PMA-951/15	Probability and Statistics (state exam).....	104
64. 1-MAT-281/00	Probability and Statistics (1).....	105
65. 1-MAT-282/00	Probability and Statistics (2).....	107
66. 1-PMA-754/16	Probability and Statistics Classes (1).....	109
67. 1-PMA-753/15	Probability and Statistics Classes (2).....	111
68. 1-PMA-752/14	Problem Solving Methods in Probability and Statistics.....	113
69. 1-MAT-130/14	Programming (1).....	114
70. 1-MAT-170/00	Programming (2).....	115
71. 1-PMA-751/13	Programming in R.....	116
72. 1-UXX-340/00	Recreation Sports in Dially Routine of Pupils and Students.....	118
73. 1-MXX-161/00	Russian Language (1).....	119
74. 1-MXX-162/00	Russian Language (2).....	120
75. 1-MXX-261/00	Russian Language (3).....	121
76. 1-MXX-262/00	Russian Language (4).....	122
77. 1-PMA-760/00	Sampling Theory.....	123
78. 2-IKVa-192/19	Science, Technology and Humanity: Opportunities and Risks.....	125
79. 1-MXX-171/20	Slovak Language for Foreign Students (1).....	127
80. 1-MXX-172/20	Slovak Language for Foreign Students (2).....	128
81. 1-MXX-271/20	Slovak Language for Foreign Students (3).....	129
82. 1-MXX-272/20	Slovak Language for Foreign Students (4).....	130
83. 1-MXX-115/15	Sports in Nature (1).....	131
84. 1-MXX-215/15	Sports in Nature (2).....	133
85. 1-MXX-216/18	Sports in Nature (3).....	135
86. 1-MXX-217/18	Sports in Nature (4).....	137
87. 1-PMA-570/00	Stochastic Models in Insurance.....	139
88. 1-MXX-133/18	Supplementary English Course (1).....	141
89. 1-MXX-134/18	Supplementary English Course (2).....	143

COURSE DESCRIPTION

Academic year: 2021/2022					
University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KAMŠ/1-PMA-912/15		Course title: BSc Seminar			
Educational activities: Type of activities: seminar Number of hours: per week: 1 per level/semester: 13 Form of the course: on-site learning					
Number of credits: 1					
Recommended semester: 6.					
Educational level: I.					
Prerequisites:					
Course requirements: Attendance at least 75 % of the course. Presentation of the bachelor thesis at the end of the semester. Scale of assessment (preliminary/final): 100/0					
Learning outcomes: The student will be informed about the basic requirements for the content and formal aspects of the bachelor's thesis. He or she will get acquainted with the citations ethics, the recommended structure of the bachelor's thesis and bibliography construction. The student will have the opportunity to present the results of the bachelor's research at the end of the semester.					
Class syllabus: Basic requirements for content and formal processing of the bachelor's thesis. Aims and goals of the research. The recommended structure of the bachelor's thesis. Citation ethics. Construction of the bibliography. Stylistics of mathematical text, mathematical concepts and notation. Techniques of editing tables, figures, graphs and appendices. Submission of the bachelor's thesis. Presentation of bachelor's thesis results. Presentation and communication skills.					
Recommended literature: Directive of the Rector of Comenius University in Bratislava on the basic requirements of final theses; lecturer's own notes and materials.					
Languages necessary to complete the course: Slovak					
Notes:					
Past grade distribution Total number of evaluated students: 51					
A	B	C	D	E	FX
80,39	0,0	0,0	1,96	15,69	1,96
Lecturers: Mgr. Gábor Szűcs, PhD.

STATE EXAM DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-PMA-991/15	Course title: BSc Thesis Defense
Number of credits: 8	
Educational level: I.	
Course requirements: state exam Scale of assessment (preliminary/final): 0/100	
Learning outcomes: The outcome will be the defended bachelor thesis.	
Class syllabus: Presentation of the results obtained in the bachelor thesis, answer to questions given by the referee in the report. Discussion with members of the committee on the topic of the thesis.	
State exam syllabus:	
Recommended literature: Literature will be recommended by the supervisor of the thesis.	
Languages necessary to complete the course: Slovak, English	
Last change: 13.03.2022	
Approved by:	

COURSE DESCRIPTION

Academic year: 2021/2022					
University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KAMŠ/1-PMA-510/00		Course title: Basics of Mathematical Statistics			
Educational activities: Type of activities: lecture Number of hours: per week: 4 per level/semester: 52 Form of the course: on-site learning					
Number of credits: 5					
Recommended semester: 5.					
Educational level: I.					
Prerequisites: FMFI.KAMŠ/1-MAT-282/00 - Probability and Statistics (2)					
Course requirements:					
Learning outcomes:					
Class syllabus: Parametric classes of distributions, random sample, statistics, basis of theory of point and interval estimation. Rao - Cramer inequality, methods of estimation of parameters. Basis of testing statistical hypothesis, Neyman - Pearson lemma, tests of one and two sided hypothesis. Tests on parameters of normal distribution.					
Recommended literature: Anděl, J.: Matematická statistika. SNTL, Alfa, Praha, 1985. Lamoš, F., Potocký R.: Pravdepodobnosť a matematická statistika, Štatistické analýzy, UK, Bratislava, 1998. Potocký, R. a kol.: Zbierka úloh z pravdepodobnosti a matematickej štatistiky. Alfa, Bratislava 1986. Rao, R.: Lineární metody statistické indukce a jejich aplikace. Praha, Academia 1978 Wilks, S.: Matematičeskaja statistika. Nauka, Moskva, 1967.

University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KAMŠ/1-PMA-750/00		Course title: Computer Data Analysis			
Educational activities: Type of activities: practicals Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning					
Number of credits: 2					
Recommended semester: 4.					
Educational level: I.					
Prerequisites: FMFI.KAG/1-MAT-120/15 - Linear Algebra and Geometry (1) and FMFI.KMANM/1-MAT-150/00 - Mathematical Analysis (2)					
Course requirements:					
Learning outcomes: After completing the course the students will be able to use the MS Excel environment for processing, visualizing and analyzing real data.					
Class syllabus: Mathematical functions in MS Excel. Probability distributions. Processing and visualization of the data. Excel VBA introduction. Descriptive statistics. Parameter estimation, hypothesis testing, regression analysis.					
Recommended literature:					
Languages necessary to complete the course:

Number of credits: 3					
Recommended semester: 5.					
Educational level: I.					
Prerequisites: FMFI.KAMŠ/1-MAT-282/00 - Probability and Statistics (2)					
Recommended prerequisites: Probability and statistics (2) 1-MAT-282					
Course requirements: project (teaching period), written exam using computer Approximate grade thresholds: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 20/80					
Learning outcomes: Using the software "R" students will be able to perform basic statistical analysis of real data.					
Class syllabus: History of R and comparison with other systems. Arithmetic, logical operators. Data import and visualization, descriptive statistics. Tests of normality. Tests about location parameters, proportions, and correlation coefficients. Linear regression: estimates, tests, confidence regions, submodels, diagnostic. ANOVA. Modern methods of statistics (cluster and discriminant analysis, Monte Carlo).					
Recommended literature: Dalgaard P: Introductory Statistics with R. Springer 2008. Anděl J: Statistické metody. Matfyzpress 2007. Venables W N et al.: An Introduction to R. The R Foundation 2021.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-PMA-741/00	Course title: Demography Statistics
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 1 per level/semester: 26 / 13 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 3.	
Educational level: I., II.	
Prerequisites:	
Course requirements: The course assessment consists of three parts. The semester evaluation has a weight of 33% and consists of solving individual assignments during the semester. In the exam period, it is possible to obtain another 33% for the elaboration and submission of the project. In order to meet the minimal condition to sit the final exam, the student must obtain at least half of the possible points from the semester evaluation and the project, respectively. The last part of the assessment has a weight of 34% and consists of a discussion about the project and an oral exam. To successfully complete the course, it is necessary to obtain at least half of the possible points in the third part of the assessment. Grade thresholds: A: 100.00% – 90.00%; B: 89.99% – 80.00%; C: 79.99% – 70.00%; D: 69.99% – 60.00%; E: 59.99% – 50.00%; Fx: 49.99% – 0.00%. Scale of assessment (preliminary/final): Practical work during semester 33% / final exam 67%.	
Learning outcomes: After completing the course students will control the basics of demographics for the purpose of actuarial practice. They will be able to construct life tables and assess the statistical properties of demographic indicators and apply statistical methods in demographic analyzes.	
Class syllabus: Basics of demography. Demographic data, sources of demographic data. Demographic indicators. Standardization and decomposition. Probability models for the number of demographic events. Construction of life tables from statistical data. Force of mortality, mathematical modeling of the force of mortality. Multiple decrement tables. Actuarial demography.	
Recommended literature: Slovník demografických pojmov / Danuša Jurčová. Bratislava : INFOSTAT – Inštitút informatiky a štatistiky, Výskumné demografické centrum, Edícia: Akty, 2005, ISBN 80-85659-40-9 [available on the Internet]; Methods of Demographic Analysis / Farhat Yusuf, Jo. M. Martins, David A. Swanson. First Edition, Dordrecht : Springer Netherlands, 2014, ISBN 978-94-007-6784-3;	

Fundamentals of Demographic Analysis: Concepts, Measures and Methods / Gordon A. Carmichael. First Edition, Cham : Springer International Publishing, Switzerland, 2016, ISBN 978-3-319-23255-3;
study materials of the lecturer.

COURSE DESCRIPTION

Academic year: 2021/2022					
University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KAG/1-MAT-140/00		Course title: Discrete Mathematics (1)			
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 1 per level/semester: 26 / 13 Form of the course: on-site learning					
Number of credits: 4					
Recommended semester: 1.					
Educational level: I.					
Prerequisites:					
Course requirements: Work during the semester: 2 midterm exams (each 18%), homework (14%) Final exam: written exam (15 points needed to pass the written exam) Approximate grade scheme: A 85%, B 70%, C 55%, D 45%, E 35% Scale of assessment (preliminary/final): 50/50					
Learning outcomes: Students will acquire skills in manipulating, describing and searching for the properties of simple mathematical objects (propositions, sets, relations) with emphasis on their exact symbolic notation, details, correct interpretation, models, examples, counterexamples. Students will improve in abstract reasoning, which uses formal logical arguments, relational properties of objects, and quantifiers (existential and universal).					
Class syllabus: Types of proofs in mathematics, propositions, propositional functions. Propositional calculus, predicate logic. The basic set operations, relations, partial orders, mappings. Finite and infinite sets, countable and uncountable sets. Cardinal numbers.					
Recommended literature: Množiny a všeličo okolo nich / Lev Bukovský. Košice : Univerzita Pavla Jozefa Šafárika, 2005 Diskrétna matematika 1 : Úvod do teórie množín, teórie booleovských funkcií a matematickej logiky / Daniel Olejár, Škoviera Martin. Bratislava : Univerzita Komenského, 1992

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAG/1-MAT-725/00	Course title: Discrete Mathematics (2)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 1 per level/semester: 26 / 13 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 2.	
Educational level: I.	
Prerequisites: FMFI.KAG/1-MAT-140/00 - Discrete Mathematics (1)	
Course requirements: Continuous evaluation: homework control (50 p.) Final exam: written (50 p.) Grades: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 50/50	
Learning outcomes: Active use of basic enumeration methods of discrete mathematics, acquiring knowledge of specific basic topics in graph theory.	
Class syllabus: Fundamental counting rules - recurrences, inclusion/exclusion. Binomical coefficients and their properties, combinatorial identities. The basic notions in graph theory. The minimal spanning tree problem. Walks in a graph-exclusion trail, hamiltonian cycle. Drawing of a graph on a surface, planar graphs, Euler's formula. Platonic solids. Colouring of a graph, the chromatic number and the chromatic index of a graph. The Four-Colour Theorem. Pigeonhole principle, Ramsey numbers.	
Recommended literature: Kapitoly z diskretní matematiky / Jiří Matoušek, Jaroslav Nešetřil. Praha : Karolinum, 2000 Introductory combinatorics / Richard A. Brualdi. Upper Saddle River : Pearson Prentice Hall, 2004 Applied and algorithmic graph theory / Gary Chartrand, Ortrud R. Oellermann. New York : McGraw Hill, 1993	
Languages necessary to complete the course: slovak, english

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-EFM-380/00	Course title: Econometrics
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 26 / 26 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 6.	
Educational level: I., II.	
Prerequisites: FMFI.KAMŠ/1-EFM-330/00 - Statistical Methods or FMFI.KAMŠ/2-MMN-106/15 - Computer Statistics or FMFI.KAMŠ/2-PMS-107/15 - Regression Models or FMFI.KAMŠ/1-DAV-303/20 - Statistical Methods or FMFI.KAMŠ/1-PMA-510/00 - Basics of Mathematical Statistics	
Recommended prerequisites: Statistical methods 1-EFM-330 or Statistical methods 1-DAV-303 or Computer statistics 2-MMN-106	
Course requirements: Continuing evaluation: project (10%) and test (20%); at least 10% out of 30% are needed to proceed to the final exam Exam: written exam Approximate grade thresholds: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 30/70	
Learning outcomes: Students are able to perform standard linear regression analysis and also are able to apply it in real econometric research. They also understand the mathematics behind these methods, being a necessary condition for further studies in this subject.	
Class syllabus: Linear regression, the geometry behind it, and LS-estimators of parameters. Decomposition of the Total Sum of Squares, coefficients of determination, and the Akaike information criterion. Properties of the parameter estimators and of the error term variance estimator. Gauss-Markov theorem. Tests of linear hypotheses about parameters. Restricted regression. Model specification errors and their diagnostic. Dummy variables. Generalized least squares. Heteroscedasticity: testing for and dealing with. Autocorrelation: testing for and dealing with.	
Recommended literature: Johnston J, DiNardo J: Econometric methods 4th ed. McGraw Hill 1997; Greene W: Econometric Analysis 8th ed. Pearson 2017; Zvára K: Regrese. MatfyzPress, 2008.

COURSE DESCRIPTION

Academic year: 2021/2022					
University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KAMŠ/1-EFM-120/17		Course title: Economics (1)			
Educational activities: Type of activities: lecture Number of hours: per week: 3 per level/semester: 39 Form of the course: on-site learning					
Number of credits: 4					
Recommended semester: 1.					
Educational level: I.					
Prerequisites:					
Course requirements: Continuous test. Final test- Scale of assessment (preliminary/final): 40/60					
Learning outcomes: Students will understand the basics of neoclassical, textbook economics.					
Class syllabus: Market forces - demand, supply. Costs, cost function. Basic market models. Perfect competition. Monopoly. Monopolistic competition. Oligopoly markets. Pricing. The role of government in a market economy.					
Recommended literature: Michael Baye: Managerial Economics and Bussines Strategy.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJP/1-MXX-131/00	Course title: English Language (1)
Educational activities: Type of activities: practicals Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: Grades: A 93%, B 85%, C 77%, D 70%, E 65% Course prerequisites: https://fmph.uniba.sk/microsites/kjp/katedra-jazykovej-pripravy/poziadavky-na-udelenie-priebežneho-hodnotenia-aj1aj2aj3-ostatne-kurzy/ Scale of assessment (preliminary/final): 100/0	
Learning outcomes: The objective of the subject is to provide the students with experience and knowledge of technical English and thus make them ready to use English sources of information for later study and professional career.	
Class syllabus: On entering the first semester, students' knowledge of English is tested and they are divided into groups according to the results of the placement test. In the groups of pre-intermediate and intermediate students, fundamentals of technical English are taught. Advanced students take classes of technical English for their field of study: English for mathematics, for physics, for computer science, English for management and economic and financial mathematics.	
Recommended literature: Anglický jazyk pre študentov FMFI UK : Kurz pre mierne pokročilých / Alena Zemanová. The textbook has not been published. It is at students' disposal in an electronic format. Anglický jazyk pre študentov FMFI UK : Aplikovaná matematika / Alexandra Maďarová, Ľubomíra Kožehubová. The textbook has not been published. It is at students' disposal in an electronic format. Anglický jazyk pre študentov FMFI UK : Matematika / kolektív autorov KJP. The textbook has not been published. It is at students' disposal in an electronic format. Anglický jazyk pre študentov FMFI UK : Fyzika / Alena Zemanová. The textbook has not been published. It is at students' disposal in an electronic format. Anglický jazyk pre študentov FMFI UK : Informatika / Elena Klátiková. The textbook has not been published. It is at students' disposal in an electronic format.

Number of credits: 5	
Recommended semester: 5.	
Educational level: I.	
Prerequisites: FMFI.KAMŠ/1-PMA-210/00 - Financial Mathematics (1)	
Course requirements: Evaluation during the semester: Project (40%), written test (40%), activity during exercises (20%) Written exam. Voluntary oral examination to improve the final evaluation. Informative evaluation scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 50/50	
Learning outcomes: After completing the course, students will understand the basic principles of interest rate theory and bond investment management. They will also get acquainted with the principles of stock portfolio management. In the last part of the lecture, they will learn pricing techniques of derivatives of the European and American type using binary trees and will also master the Black-Scholes formulas for put and call option pricing.	
Class syllabus: Coupon and zero-coupon bonds, term structure of interest rates, bootstrap method, yield to maturity, forward rates, duration. Binomial tree model, risk-neutral probabilities, risk-neutral valuation formula, Black-Scholes formula, pricing of american options. Aversion to risk, properties of utility functions, utility functions and mean-variance analysis, the problem of Markowitz, Capital Asset Pricing Model (CAMP), factor models.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-PMA-530/00	Course title: General Insurance Theory
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 1 per level/semester: 26 / 13 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 5.	
Educational level: I.	
Prerequisites: FMFI.KAMŠ/1-MAT-282/00 - Probability and Statistics (2)	
Course requirements: During the semester the student can obtain 33% of the assessment for one written test. In order to meet the minimal condition to sit the final written exam, the student must obtain at least half of the points from the semester test. To successfully complete the course, it is necessary to get at least half of the points from the exam too, which has a weight of 67%. Grade thresholds: A: 100.00% – 90.00%; B: 89.99% – 80.00%; C: 79.99% – 70.00%; D: 69.99% – 60.00%; E: 59.99% – 50.00%; Fx: 49.99% – 0.00%. Scale of assessment (preliminary/final): Practical work during semester 33% / final exam 67%.	
Learning outcomes: The student will be able to use basic methods of calculating insurance premiums and reserves in non-life insurance. He or she will also get acquainted with bonus-malus systems, forms of deductible and reinsurance, theory of credibility and actuarial model construction techniques.	
Class syllabus: General premium principles and their properties. Utility functions, premium principle of equivalent utility. Deductible, excess and franchise. Reinsurance; proportional and non-proportional forms of reinsurance; quota share reinsurance, surplus reinsurance, excess-of-loss reinsurance, stop-loss reinsurance. Collective risk model. Estimation of claim frequency distribution and claim severity distribution. Bonus-malus schemes and No-Claim Discount (NCD) systems. Credibility theory. American and Bayesian approach - various models. Estimation of technical provisions in non-life insurance, run-off triangles: chain-ladder method, separation method and other methods.	
Recommended literature: Aplikovaná poistná štatistika / Viera Pacáková. Bratislava : Iura Edition, 2004; Modern Actuarial Risk Theory Using R / Rob Kaas, Marc Goovaerts, Jan Dhaene, Michel Denuit. Second Edition, Heidelberg : Springer-Verlag, 2008; study materials of the lecturer.	
Languages necessary to complete the course: Slovak, English

Prerequisites:					
Course requirements: Scale of assessment (preliminary/final): 100/0					
Learning outcomes: To master the fundamentals of the common language and basic technical terms of particular fields of study (depending on the student's level of German proficiency)					
Class syllabus: German language is taught at three levels: beginner, intermediate and advanced. Students opt for one of them depending on whether they need to learn the fundamentals or maintain and/or improve their previous knowledge. This course's focus is to master the fundamentals of the common language and basic technical terms of particular fields of study (depending on the student's level of German proficiency)					
Recommended literature: Appropriate study material is supplied by teacher based on the participants'level of German proficiency.

STATE EXAM DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-PMA-961/15	Course title: Insurance and Financial Mathematics
Number of credits: 2	
Educational level: I.	
Course requirements: Evaluation based on: assessment by the committee for state exams. Approximate grade thresholds: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 0/100	
Learning outcomes: The student passes the state exam from insurance and financial mathematics.	
Class syllabus: The student draws questions from a given field of questions from profile courses. After a short preparation he answers the questions and additional questions of the members of the committee.	
State exam syllabus:	
Recommended literature: Modely v životnom a neživotnom poistení / Rastislav Potocký. Bratislava : Statis, 2012 Finančná matematika / Rastislav Potocký. Bratislava : Univerzita Komenského, 2000	
Languages necessary to complete the course: Slovak, English	
Last change: 13.03.2022	
Approved by:	

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-PMA-310/00	Course title: Insurance Mathematics (1)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 26 / 26 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 5.	
Educational level: I.	
Prerequisites: FMFI.KAMŠ/1-MAT-281/00 - Probability and Statistics (1) and FMFI.KAMŠ/1-EFM-240/15 - Corporate Finance	
Course requirements: During the semester the student can get 50% of the assessment for one written test. In order to meet the minimal condition to sit the final written exam, the student must obtain at least half of the points from the test. To successfully complete the course, it is necessary to get at least half of the points from the exam too, which has a weight of 50%. Grade thresholds: A: 100.00% – 90.00%; B: 89.99% – 80.00%; C: 79.99% – 70.00%; D: 69.99% – 60.00%; E: 59.99% – 50.00%; Fx: 49.99% – 0.00%. Scale of assessment (preliminary/final): Practical work during semester 50% / final exam 50%.	
Learning outcomes: After completing the course student receives an overview of the classical life insurance products, and net and gross premium calculation and methods of reserving. Student will be able to solve basic problems in life insurance mathematics.	
Class syllabus: General principles of life insurance. Deterministic approach. Net premium principle. Basic insurance products: pure endowment, assurances (whole life, term, deferred, increasing), endowment, annuities (whole life, term, deferred, increasing). Stochastic approach, force of mortality, future lifetime and expected future lifetime, mortality laws: de Moivre model, Gompertz law, Gompertz–Makeham law and Weibull mortality law. Net and gross premiums. Policy values, loss function, prospective net reserves, gross reserve, Zillmer reserve. Surrender and paid-up values. Alterations to policies.	
Recommended literature: Life Insurance Mathematics / Hans U. Gerber. Heidelberg : Springer, 1997, ISBN 978-3-662-03460-6; Introduction to Insurance Mathematics / Annamaria Olivieri, Ermanno Pitacco. Cham : Springer, 2015, ISBN: 3319213768; study materials of the lecturer.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-PMA-320/00	Course title: Insurance Mathematics (2)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 26 / 26 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 6.	
Educational level: I.	
Prerequisites: FMFI.KAMŠ/1-PMA-310/00 - Insurance Mathematics (1)	
Course requirements: During the semester the student can get 50% of the assessment for one written test. In order to meet the minimal condition to sit the final written exam, the student must obtain at least half of the points from the test. To successfully complete the course, it is necessary to get at least half of the points from the exam too, which has a weight of 50%. Grade thresholds: A: 100.00% – 90.00%; B: 89.99% – 80.00%; C: 79.99% – 70.00%; D: 69.99% – 60.00%; E: 59.99% – 50.00%; Fx: 49.99% – 0.00%. Scale of assessment (preliminary/final): Practical work during semester 50% / final exam 50%.	
Learning outcomes: After completing the course student will master the cash-flow model of the life insurance, profit testing and calculation techniques of the present value of future profits, risk margin, internal rate of return and discounted payback period. Student will be able to evaluate unit-linked insurance products.	
Class syllabus: Risk pooling in life insurance. The cash-flow model and profit testing. Profit vector and profit signature. Measures of profit: present value of future profits, profit margin, internal rate of return, discounted payback period. Unit linked insurance plans (ULIP). Yield curves and their applications in life insurance. With-profits or participating insurance policies and bonuses in life insurance. Multiple life insurance.	
Recommended literature: Life Insurance Mathematics / Hans U. Gerber. Heidelberg : Springer-Verlag, 1997; Introduction to Insurance Mathematics / Annamaria Olivieri, Ermanno Pitacco. COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-EFM-511/15	Course title: Introduction to University-level Mathematics (1)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 26 / 26 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: Continuous assessment: warm-ups (1/3 of the assessment) and homework (2/3 of the assessment) during the semester. It is necessary to obtain at least 50% from each assignment. Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0	
Learning outcomes: Students will learn to formulate their own thoughts, argue and prove claims mathematically accurately orally and verbally. They will also consolidate and supplement the knowledge of high school mathematics needed in their further studies.	
Class syllabus: Classes give an introduction to logic, proof techniques and a variety of example problems that illustrate different aspects of mathematical proof. Particular emphasis is given to teaching fundamentals of how to communicate thoughts rigorously: both in an oral fashion and in a written form. Classes also enable students to consolidate their learning and mathematical background to help follow the Mathematical Analysis and Linear Algebra courses. Topics cover also algebraic expression, linear and quadratic function, real functions of one variable and their properties.	
Recommended literature: Kubáček, Z, Žabka, J: Seminár z matematiky, Zbierka úloh s riešeniami, 1. časť. , 2017. Kubáček, Z, Žabka, J: Seminár z matematiky, Zbierka úloh s riešeniami, 2. časť., 2018. COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-PMA-710/15	Course title: Legislation and Accountancy of Insurance Companies
Educational activities: Type of activities: lecture Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 2.	
Educational level: I.	
Prerequisites:	
Course requirements: During the semester the student can get 100% points for one written test, which is usually written during the last two weeks of the semester. Grade thresholds: A: 100.00% – 90.00%; B: 89.99% – 80.00%; C: 79.99% – 70.00%; D: 69.99% – 60.00%; E: 59.99% – 50.00%; Fx: 49.99% – 0.00%. Scale of assessment (preliminary/final): Practical work during semester 100% / final exam 0%.	
Learning outcomes: After completing the course student will master the basic concepts of insurance and the legislation regulating insurance in Slovakia. The student will know the basic accounting principles and reporting standards of insurance companies.	
Class syllabus: Basic concepts in insurance business. Origin and development of insurance in the world. Insurance market in Slovakia and in the European Union Acts (in their current and complete wording) regulating the insurance industry: Act on Insurance, Act on Compulsory Contractual Motor Vehicle Third Party Liability Insurance. Social and pension security in Slovakia. Solvency II. Dual Aspect Concept of accounting, Double Entry Accounting System, balance sheet, assets and liabilities, profit and loss statement, annual report. Concepts of synthetic and analytical accounts. Budgeting principles. Accounting documentation. Accounting and reporting standards in insurance sector; IFRS 17 and its impact on actuarial calculations, accounting processes and reporting techniques (calculation of the change in insurance contract liabilities and reporting the insurance company's profit).	
Recommended literature: Poist'ovníctvo a účtovníctvo poisťovní / Jitka Meluchová. Bratislava : Iura Edition, 2004; Účtovníctvo / Božena Soukupová, Anna Šlosárová, Anna Baštincová. Bratislava : Iura Edition, 2004; Collection of Laws of the Slovak Republic; study materials of the lecturer.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAG/1-MAT-120/15	Course title: Linear Algebra and Geometry (1)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 4 / 2 per level/semester: 52 / 26 Form of the course: on-site learning	
Number of credits: 8	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: Continuous assessment: 2 tests and 2 presentations at tutorials (together 30% of the overall mark), the student has to have at least mark E to be admitted to the exam Exam: a test and an oral exam (35% and 35% of overall mark) Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 30/70	
Learning outcomes: Students will acquire practical skills in solving and in qualitative analysis of systems of linear equations; they will master the basics of the theory of vector spaces and linear maps. Students will improve in proving mathematical statements and deriving properties of mathematical objects, they will advance in the ability to argue in the language and style of university mathematics.	
Class syllabus: Number systems. Functions. Groups, rings and fields. Vector spaces. Gaussian elimination method for solving systems of linear equations. Matrices and linear maps. Solvability of a system of linear equations and the structure of the set of its solutions. Determinants and their use. Euclidean vector spaces. Orthogonal projection onto a subspace of a Euclidean vector space.	
Recommended literature: Prednášky z lineárnej algebry a geometrie / Július Korbaš, Štefan Gyurki. Vydavateľstvo UK, Bratislava, 2013 Lineárna algebra a geometria : Cesta z troch rozmerov s presahmi do príbuzných odborov / Pavol Zlatoš. Course ID: FMFI.KAG/1-MAT-160/15	Course title: Linear Algebra and Geometry (2)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 4 / 2 per level/semester: 52 / 26 Form of the course: on-site learning	
Number of credits: 8	
Recommended semester: 2.	
Educational level: I.	
Prerequisites: FMFI.KAG/1-MAT-120/15 - Linear Algebra and Geometry (1)	
Course requirements: Continuous assessment: 2 tests and 2 presentations at tutorials (together 30% of the overall mark), the student has to have at least mark E to be admitted to the exam Exam: a test and an oral exam (35% and 35% of overall mark) Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 30/70	
Learning outcomes: Students will learn the basics of affine geometry, respectively affine-euclidean spaces, deepen and expand knowledge about linear maps (transformations), master the basics of the theory of quadratic forms and their geometric applications and the basics of multilinear algebra. Students will improve in proving mathematical statements and deriving properties of mathematical objects, they will be able to argue in the language and style of university mathematics.	
Class syllabus: Affine spaces and affine subspaces (linear varieties); orientation. Affine-Euclidean space. Vector product and triple product of vectors; applications. Linear transformations. Eigenvalues and eigenvectors. Bilinear and quadratic forms. Second order curves; applications of the theory of quadratic forms. Dual vector space. Tensor product of vector spaces.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAG/1-MAT-191/00	Course title: Linear Algebra and Geometry Classes (1)
Educational activities: Type of activities: practicals Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: Homework assignments Grading: A 90%, B 80%, C 70%, D 60%, E 50%, Fx < 50% Scale of assessment (preliminary/final): Semester 100% (homework assignments)	
Learning outcomes: The students will acquire practical skills in various computations related to the topics of the course Linear Algebra and Geometry (1). Discussion of problems will improve their ability to analyze problems and build coherent arguments. The students will gain better insight into why various algorithms lead to the desired results. They will also understand the limitations of these algorithms.	
Class syllabus: Topics corresponding to the individual interests of students, within the following framework: Number systems (integers, rational numbers, real numbers, complex numbers), mappings, groups, rings, fields, vector spaces, the Gaussian elimination method for solving systems of linear equations, matrices and linear mappings, solvability of a system of linear equations and structure of the solution set, determinants and their applications, Euclidean vector spaces, orthogonal projection to a subspace.	
Recommended literature: J. Korbaš: Lineárna algebra a geometria I. Univerzita Komenského, Bratislava 2003. T. Katriňák, M. Gavalec, E. Gedeonová, J. Smítal: Algebra a teoretická aritmetika 1. COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAG/1-MAT-192/00	Course title: Linear Algebra and Geometry Classes (2)
Educational activities: Type of activities: practicals Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 2.	
Educational level: I.	
Prerequisites:	
Course requirements: Homework assignments Grading: A 90%, B 80%, C 70%, D 60%, E 50%, Fx < 50% Scale of assessment (preliminary/final): Semester 100% (homework assignments)	
Learning outcomes: The students will acquire practical skills in various computations related to the topics of the course Linear Algebra and Geometry (2). Discussion of problems will improve their ability to analyze problems and build coherent arguments. The students will be able to apply the standard computational algorithms and they will improve their geometric intuition.	
Class syllabus: Topics corresponding to the individual interests of students, within the following framework: Affine spaces and subspaces. Orientation. Affine spaces with an inner product. Vector product and mixed product and their applications. Selected facts on polynomials. Linear transformations (eigenvalues, eigenvectors, diagonalization, Jordan normal form). Bilinear and quadratic forms. Plane curves of the second order; applications of the theory of quadratic forms. Dual vector spaces. Multilinear forms. Tensors.	
Recommended literature: M. Hejný, V. Zaťko, P. Kršňák: Geometria 1. SPN, Bratislava 1985. T. Katriňák, M. Gavalec, E. Gedeonová, J. Smítal: Algebra a teoretická aritmetika 1. Univerzita Komenského, Bratislava 1999. P. Kaprálik, J. Tvarožek: Zbierka riešených príkladov a úloh z lineárnej algebry a analytickej geometrie. ALFA, Bratislava 1987. A. I. COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KMANM/1- MAT-110/00	Course title: Mathematical Analysis (1)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 4 / 2 per level/semester: 52 / 26 Form of the course: on-site learning	
Number of credits: 8	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: For the semester, the student can get 15 points for exercises, 40 points for written exams, the final written exam has a weight of 30 points, the final oral exam weighs 15 points. The student must obtain at least 45 points from the exercises, written exams and the final written exam, at least 15 points from the final written exam and at least 5 points from the final oral exam. Grading: A (91-100 points), B (81-90 points), C (71-80 points), D (61-70 points), E (51-60 points), Fx (0-50 points). Weight of the ongoing / final assessment: ongoing assessment 55% (15% exercise + 40% written exams) / 45% (30% final written exam, 15% final oral exam). Scale of assessment (preliminary/final): 55/45	
Learning outcomes: After completing the course, the student can use the apparatus of differential calculus of functions of one real variable in solving appropriate problems of theoretical and practical focus.	
Class syllabus: Real numbers, functions of real variables. Limit of the function, basic theorems on limits. Compact sets. Continuity of a function in a point and on a set, basic properties of continuous functions on intervals and compact sets. Derivative and general rules for differentiation. Repeated differentiation. Mean value theorems. Applications of the derivative. L'Hospital's rule. Taylor's polynomials.	
Recommended literature: Rudin, Walter: Principles of mathematical analysis, ISBN 0-07-054235-X Hildebrandt, Stefan: Analysis I, ISBN 3-540-42838-0 Forstter, Otto: Analysis I, ISBN 3-528-57224-8 Neubrunn, Tibor a Vencko, Jozef: Mathematical Analysis I, textbook of FMFI UK Kubáček, Valášek: Cvičenia z Matematickej analýzy 1,2

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-EFM-210/00	Course title: Mathematical Analysis (3)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 4 / 2 per level/semester: 52 / 26 Form of the course: on-site learning	
Number of credits: 8	
Recommended semester: 3.	
Educational level: I.	
Prerequisites: ((FMFI.KAMŠ/1-EFM-110/00 - Mathematical Analysis (1) and FMFI.KAMŠ/1-EFM-130/00 - Mathematical Analysis (2)) or (FMFI.KMANM/1-MAT-110/00 - Mathematical Analysis (1) and FMFI.KMANM/1-MAT-150/00 - Mathematical Analysis (2))) and (FMFI.KAG/1-EFM-160/12 - Linear Algebra and Geometry (2) or FMFI.KAG/1-MAT-160/15 - Linear Algebra and Geometry (2))	
Course requirements: Continuous assessment: 2 tests, evaluation of oral presentations Examination: written and oral examination Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 40/60	
Learning outcomes: To master the basics of the differential calculus of functions of several variables with emphasis on the methods used in the economic sciences. Upon completion of the course, students will acquire key competences in the field of vector mathematical analysis and finite-optimization methods.	
Class syllabus: Class syllabus: Topic 1: Normed vector spaces (NVS). • Norm and its properties. • Equivalent norms. • Examples of norms in general NVS. • Euclidean space. Scalar product. • Cauchy-Schwartz inequality, Young's and Minkowski inequality. • Linear mappings and functionalities. Topic 2: Topological properties of NVS. • Open and closed sets in a NVS. • Boundary of a set. • Convergence of sequences in NVS. • Compact sets, criteria for compactness, Heine-Borel theorem. • Complete normed spaces, Banach and Hilbert space. • Completions of a normed space.	

- Lebesgue space.

- Contiguous set.

- Convex set in the NVS.

Topic 3: Continuity in NVS.

- Limits of functions. The definition of continuity of a function in NVS.

- Extremal properties of continuous functions on compact and contiguous subsets.

- Contractive mapping and Banach theorem on the existence of a fixed point and its applications

Topic 4: Multivariate functions.

- Relationship between multiple limit and limits of functions of more variables.

- Graph over a function of several variables.

- Convex and concave function.

- Level sets of convex functions.

Topic 5: Differentiability of functions of several variables.

- Partial derivatives of functions of several variables and their geometric interpretation.

- Partial derivatives of higher order, interchangeability of the order of differentiation.

- The derivative of a multivariate function and its geometrical interpretation.

- Relationship between derivative of a function and its partial derivatives, Jacobi matrix.

- Derivative of a composite function. Derivatives of higher order.

Topic 6: Properties of differentiable functions.

- Taylor series for multivariate function.

- Differential of a function and its use to determine the approximate value of a function.

- Gradient of a function and directional derivatives.

- Relationship between gradient and level set of a differentiable function.

- Convexity criterion for functions of several variables.

Topic 7: Extremal properties of multivariate functions.

- Tangent plane to a graph of a functions.

- Maximum and minimum of a multivariate function, local extremes. Saddle points.

- Necessary conditions for local extremes of functions of several variables.

- Sufficient conditions for local extremes and Hessian matrix of second derivatives.

- Global extremes and methods for their determination.

- Applications that lead to finding extremes of unconstrained functions.

Topic 8: Functions given implicitly.

- Examples of importance of implicit functions.

- The existence of an implicit function.

- Derivative of implicit function.

- Existence of an inverse function.

Topic 9: Extremes of a constrained multivariate function.

- Importance and application of extremes of a constrained multivariate function.

- Geometric interpretation of the extreme of a constrained multivariate function and Lagrange multipliers.

- Lagrangian.

- Necessary conditions for the existence of an extreme of a constrained function.

- Methods for determining the extreme type, some simple sufficient conditions for finding constrained minimum/maximum.

- General sufficient condition for an extreme of a constrained function and bounded Hessian.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-EFM-250/00	Course title: Mathematical Analysis (4)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 4 / 2 per level/semester: 52 / 26 Form of the course: on-site learning	
Number of credits: 8	
Recommended semester: 4.	
Educational level: I.	
Prerequisites: (FMFI.KAMŠ/1-EFM-130/00 - Mathematical Analysis (2) or FMFI.KMANM/1-MAT-150/00 - Mathematical Analysis (2)) and FMFI.KAMŠ/1-EFM-210/00 - Mathematical Analysis (3)	
Course requirements: Continuous assessment: 2 written tests, evaluation of oral presentations Examination: written and oral examination Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 40/60	
Learning outcomes: To master the basics of the integral calculus of functions of multiple variables, with emphasis on the methods used in financial mathematics. Upon completion of the course students will acquire key competences in the field of vector mathematical analysis.	
Class syllabus: Class syllabus: Topic 1: Fourier series. • Decomposition of a function into Fourier series. • Formulas for the Fourier coefficients • Complex form of trigonometric series. • Periodic extension of a functions. • Pointwise convergence of Fourier series. Fejer kernel. • Bessel inequality and Parseval equality. • Odd and even extentions of functions and their decomposition into Fourier series. • Applications of the Fourier series. • Solution to the boundary value problem for ordinary differential equations using Fourier series. Topic 2: Parametric integrals. • Definition of a parametric integral. • Examples of parametric integrals. • Continuity and differentiability of parametric integrals. • Parametric integrals of unbounded functions. • Parametric integrals on unbounded intervals.	

- Method of calculation for parametric integrals.
- Gamma, Beta functions and their properties.

Topic 3: Riemann integral of multivariate function.

- Riemann integral on a bounded area.
- Properties of the integral of a multivariate function.
- Fubini theorem.

Topic 4: Substitution method for integrating functions of several variables.

- Linear and non-linear coordinate transformation.
- Jacobi matrix of a transformation and the geometric interpretation of its determinant.
- Substitution theorem for integrals of multivariate functions.
- Polar and spherical coordinates.
- Method of calculation of multidimensional integrals by transformation of variables.

Topic 5: Curve and surface integrals.

- Integrating functions defined on curves.
- Curve integral: kind I. and II..
- Integrating functions defined on surfaces.
- Surface integrals.
- Relationship between, curve, surface and volume integrals.
- Green's formula of integration by parts.
- Ostrogradskij-Gauss theorem and Stokes formula.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-PMA-215/15	Course title: Matrix Algebra for Statisticians
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 26 / 26 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 3.	
Educational level: I.	
Prerequisites: FMFI.KAG/1-MAT-160/15 - Linear Algebra and Geometry (2) or FMFI.KAG/1-DAV-104/20 - Linear Algebra	
Course requirements: Evaluation based on: tests (teaching period), written and oral exam Approximate grade thresholds: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 40/60 (30 written exam + 30 oral exam)	
Learning outcomes: The students will deepen their knowledge of matrices and their properties. They will familiarize themselves with the concepts of matrix algebra that are necessary or useful for various methods of statistics and data analysis.	
Class syllabus: Block matrices, matrix as a linear mapping, systems of linear equations. Column and null space, rank, inverse matrix. Elimination and LU decomposition. Orthogonal matrices and QR decomposition. The space of matrices, matrix norm, trace. Generalized inverse and Moore-Penrose pseudoinverse. Projection matrices, least squares problem. Positive (semi)definite matrices. Eigenvalues and eigenvectors, matrix powers, spectral decomposition. Singular decomposition.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-PMA-540/00	Course title: Models in Health Insurance
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 1 per level/semester: 26 / 13 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 4.	
Educational level: I.	
Prerequisites: FMFI.KAMŠ/1-MAT-281/00 - Probability and Statistics (1)	
Course requirements: Preliminary semester evaluation: homeworks(20%) and a test(20%) Examination: written examination Approximate grade thresholds: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 40/60	
Learning outcomes: Upon the succesful completion of the course the student will be able to use the multiple state Markov model to calculate probabilities and actuarial values used in health insurance or critical illness insurance. A similar approach may be used in other models (unemployment, etc.)	
Class syllabus: Discrete time Markov chain, transition probabilities, forces of transition. Chapman-Kolmogorov equation, differential equations for occupation probabilities and transition probabilities in multidecrement models and in the three state model active-ill-dead. Maximal likelihood estimates of forces o transition and their properties. Multiple decrement tables, central rates of decrement. Single decrement tables, independent and dependent rates of decrement. Semimarkov approach to the three state model, splitting of states. Application of models to health insurance: benefits, premiums, and reserves. Critical illness and dread disease insurance models.	
Recommended literature: Škrovánková, Bíliková: Penzijné a nemocenské poistenie, Ekonóm 2002; Janková, Kilianová, Brunovský, Bokes: Markovove reťazce a ich aplikácie, Epos, Bratislava 2014; Dickson D, Hardy M, Waters H: Actuarial mathematics for life contingent risks, Cambridge University Press 2009

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KMANM/1- MAT-240/00	Course title: Numerical Mathematics (1)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 26 / 26 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 4., 6.	
Educational level: I., II.	
Prerequisites: FMFI.KMANM/1-MAT-150/00 - Mathematical Analysis (2) or FMFI.KMANM/1-INF-150/00 - Mathematical Analysis (2) or FMFI.KAMŠ/1-DAV-102/20 - Calculus (1)	
Course requirements: Preliminary assessment: 2 written tests 10 points each, individual work 10 points Final examination: written exam for 50 points and oral exam for 20 points Indicative assessment scale: A 88%, B 78%, C 68%, D 58%, E 48% Scale of assessment (preliminary/final): 30/70	
Learning outcomes: After completing the course, students will be able to solve numerical mathematics problems from mathematical analysis, algebra, applied mathematics and practice using computers and available software.	
Class syllabus: Position of numerical mathematics in solving of real problems. Concept of stability. Errors and computational arithmetic. The solution of nonlinear equations. Solution of system nonlinear equations. Approximation of functions. Interpolation - Lagrange's and Newton's interpolation polynomial and their errors. Optimal selection of interpolations point. Chebyshev polynomials. Linear and cubic splines. The least square method. Numerical differentiation. Numerical quadrature. The solution of simultaneous linear equations.

Educational activities: Type of activities: practicals Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning					
Number of credits: 0					
Recommended semester: 1.					
Educational level: I.					
Prerequisites:					
Course requirements: Grades: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0					
Learning outcomes: Orientation in the history of the selected sports discipline, mastering the basic principles of compensation of mostly mental burdens of the individual. Creating a positive, lasting relationship to physical education and sports in the sense of calocagation. Mastering the demands for the development of motor abilities, skills, proper technique of performing individual movements in individual sports, individual game activities in collective sports games.					
Class syllabus: Introduction to the basic history of the selected sport, with the basic principles of compensation of one-sided psychological burden of the individual's body. Development of basic motor skills with a stop to all kinds of endurance, coordination, increasing the level of joint mobility. Training of individual game activities in collective sports games. In individual sports disciplines, practice of basic techniques of individual elements.

STATE EXAM DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-PMA-951/15	Course title: Probability and Statistics
Number of credits: 2	
Educational level: I.	
Course requirements: State exam. Scale of assessment (preliminary/final): 0/100	
Learning outcomes: The student passes the state exam from probability and mathematical statistics.	
Class syllabus: The student draws questions from a given field of questions from profile courses related to probability theory and statistics. After a short preparation he answers the questions and additional questions of the members of the committee.	
State exam syllabus:	
Recommended literature: Pravdepodobnosť a štatistika / Katarína Janková, Andrej Pázman. Bratislava : Univerzita Komenského, 2013 Statistical inference / George Casella, Roger L. Berger. Belmont: Cengage Learning, 2002. Základy matematické statistiky / Jiří Anděl. Praha: Matfyzpress, 2005

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-MAT-281/00	Course title: Probability and Statistics (1)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 1 per level/semester: 26 / 13 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 3.	
Educational level: I.	
Prerequisites: (FMFI.KMANM/1-MAT-150/00 - Mathematical Analysis (2) or FMFI.KMANM/1-MMN-150/15 - Mathematical Analysis (2) or FMFI.KAMŠ/1-EFM-130/00 - Mathematical Analysis (2)) and (FMFI.KAG/1-MAT-120/15 - Linear Algebra and Geometry (1) or FMFI.KAG/1-MMN-120/00 - Linear Algebra and Geometry (1) or FMFI.KAG/1-EFM-121/15 - Linear Algebra and Geometry (1))	
Course requirements: Preliminary semester evaluation: a test Examination: written examination Approximate grade thresholds: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 50/50	
Learning outcomes: After completing the course the student will be able to use classical probability models, axiomatic approach to the definition of probability. He will master one dimensional discrete and continuous random variables. He will be given an introduction to selected statistical procedures: point and interval estimates of parameters sampling normal distribution.	
Class syllabus: Probability space. Classical probability models. Random variable and distribution function. Elementary discrete and continuous distributions, expectation and variance. Independence and correlation. Normal distribution and the central limit theorem. Random sample, sample mean, sample variance. Sampling normal distribution. Estimation of parameters, maximal likelihood, confidence intervals for the mean of a normal distribution.	
Recommended literature: Janková, K., Pázman, A.: Pravdepodobnosť a štatistika, Vydavateľstvo UK 2011 Harman, R., Honschová, E., Somorčík, J.: Zbierka úloh zo základov teórie pravdepodobnosti, Paci Bratislava 2009 G.R.Grimmett, D. Course requirements: Preliminary assessment: test Examination: written examination Approximate final assessment: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 30/70	
Learning outcomes: After completing the course the student will master multivariate discrete and continuous distributions. He will be able to calculate distributions of sums, products and ratios of independent random variables. He will know the technique of characteristic functions and will be able to apply it to the multidimensional normal distribution. The knowledge of probability methods will be applied to selected statistical problems of parameter estimation and hypotheses testing.	
Class syllabus: Multiple random variables, their distribution and characteristics. Elementary introduction to Lebesgue integral. Marginal and conditional distributions and densities. Independence, sums of independent random variables. Characteristic functions and their applications. Convergence of sequences of random variables, central limit theorems and weak law of large numbers. Statistical inference: estimation of parameters, maximal likelihood estimates, hypothesis testing. Neyman Pearson lemma. Regression models: least squares and maximal likelihood estimation of parameters. Goodness of fit tests.

Educational level: I.					
Prerequisites: FMFI.KAMŠ/1-MAT-281/00 - Probability and Statistics (1) or FMFI.KAMŠ/1-DAV-201/20 - Fundamentals of Probability and Statistics					
Course requirements: Assessment during the term: homework (60%), test (40%). Grading: A: 90 and more, B: [80, 90), C: [70, 80), D: [60, 70), E: [50, 60), FX: less than 50 Scale of assessment (preliminary/final): 100/0					
Learning outcomes: Student gains skills in applying the knowledge from probability and statistics to solve problems, including real life applications.					
Class syllabus: Combinatorial probability, conditional probabilities, Bayes theorem. Discrete and continuous random variables and random vectors - computation of probabilities, moments, transformations, computer simulations, applications. Selected statistical methods.					
Recommended literature: Jíří Anděl: Matematika náhody. Praha, MatfyzPress, 2000.					
Languages necessary to complete the course: Slovak, English

Educational activities: Type of activities: course Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning					
Number of credits: 2					
Recommended semester: 4.					
Educational level: I.					
Prerequisites:					
Course requirements: Evaluation based on: two tests (test1 40%, test 2 60%, teaching period) Approximate grade thresholds: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0					
Learning outcomes: Students will learn to work in the R environment, program simple functions and work with data frames.					
Class syllabus: Working with environment and R workspaces, basic operations. Manipulating variables, vectors, matrices and data frames. Conditional statements and flow control. Basic programming techniques, writing scripts and functions. Working with data files, elementary statistical operations. Using graphical procedures for data visualization. Basic optimization functions. Creating documents with R markdown.

COURSE DESCRIPTION

Academic year: 2021/2022					
University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KTV/1-MXX-217/18		Course title: Sports in Nature (4)			
Educational activities: Type of activities: Number of hours: per week: per level/semester: Form of the course: on-site learning					
Number of credits: 1					
Recommended semester: 4.					
Educational level: I.					
Prerequisites:					
Antirequisites: FMFI.KTV/1-UXX-152/22					
Course requirements: Grades: A 90%, B 80%, C 70%, D 60%, E 50% The condition for the award of 1 or 2 credits is the completion of a multi-day course in its full scope, or the completion of one-day courses in the scope of 4 days. Candidates can apply to the leaders of individual courses. From the presented offer of courses, you can choose the one that suits your interests, abilities and deadlines.					
Learning outcomes: Creating a positive and lasting relationship with physical activity. Acquisition and mastery of basic motor skills and abilities in outdoor sports: windsurfing, beach volleyball, water tourism - river rafting, hiking and other sports according to interest. Training and improving the technique needed for the sports.					
Class syllabus: The student can sign up for the outdoor sports courses offered by the department: water tourism - river rafting, windsurfing, beach volleyball, hiking and other hobby sports. The lessons in the courses are focused on the development of basic and special movement skills and, mastering the techniques needed for the sports.					
Recommended literature:					
Languages necessary to complete the course: Slovak					
Notes: KTVŠ will provide material equipment.

COURSE DESCRIPTION

Academic year: 2021/2022	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-PMA-570/00	Course title: Stochastic Models in Insurance
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 1 per level/semester: 26 / 13 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 6.	
Educational level: I.	
Prerequisites: FMFI.KAMŠ/1-MAT-282/00 - Probability and Statistics (2)	
Course requirements: During the semester the student can obtain 33% of the assessment for one written test. In order to meet the minimal condition to sit the final written exam, the student must obtain at least half of the points from the semester test. To successfully complete the course, it is necessary to get at least half of the points from the exam too, which has a weight of 67%. Grade thresholds: A: 100.00% – 90.00%; B: 89.99% – 80.00%; C: 79.99% – 70.00%; D: 69.99% – 60.00%; E: 59.99% – 50.00%; Fx: 49.99% – 0.00%. Scale of assessment (preliminary/final): Practical work during semester 33% / final exam 67%.	
Learning outcomes: After completing the course the student will master the collective risk model and approximations of the probability distribution of aggregate claims. Student will be able to solve basic problems in risk theory and ruin theory.	
Class syllabus: Individual risk model. Collective risk models for a single and extended period. Probability distribution of aggregate claims and its approximations. Stochastic processes in risk theory. Claim processes. Discrete time models. Introduction to the ruin theory, the Cramér-Lundberg inequality.	
Recommended literature: Modern Actuarial Risk Theory Using R / Rob Kaas, Marc Goovaerts, Jan Dhaene, Michel Denuit. Second Edition, Heidelberg : Springer-Verlag, 2008; Insurance Risk and Ruin / David C. M. Dickson. First Edition, New York : Cambridge University Press, 2005; Non-Life Insurance Mathematics / Thomas Mikosch. Second Edition, Heidelberg : Springer-Verlag, 2009; study materials of the lecturer.	
Languages necessary to complete the course: Slovak, English
