

## Course descriptions

### TABLE OF CONTENTS

|                                                                                         |    |
|-----------------------------------------------------------------------------------------|----|
| 1. 3-FBP-203/15 Bio-medical Applications of Plasmas and Radiation.....                  | 2  |
| 2. 3-MXX-101/15 Course of English for PhD Studies (1).....                              | 3  |
| 3. 3-MXX-102/15 Course of English for PhD Studies (1).....                              | 4  |
| 4. 3-FBF-806/10 Creation of Teaching Texts and Aids.....                                | 5  |
| 5. 3-FBF-404/15 Department Seminar in the Summer Semester.....                          | 6  |
| 6. 3-FBF-203/15 Department Seminar in the Winter Semester.....                          | 7  |
| 7. 3-FBF-709/10 Development of Novel Software Product Linked with PhD Project.....      | 8  |
| 8. 3-FBF-990/15 Dissertation Thesis Defense ( <b>state exam</b> ).....                  | 9  |
| 9. 3-FBF-004/00 Effect of Light on Living Organisms.....                                | 10 |
| 10. 3-FBF-003/00 Experimental Methods of Biophysics.....                                | 12 |
| 11. 3-FBF-703/10 Home Project Co-researcher.....                                        | 14 |
| 12. 3-FBF-101/10 Individual Study of Science and Research Resources (2).....            | 15 |
| 13. 3-FBF-104/10 Individual Study of Science and Research Resources (2).....            | 16 |
| 14. 3-FBF-702/10 International Project Co-researcher.....                               | 17 |
| 15. 3-FBF-708/10 Introduction of Novel Experimental Method Linked with PhD Project..... | 18 |
| 16. 3-FBF-012/15 Methods for Preparation and Implementation of Research Projects.....   | 19 |
| 17. 3-FBF-001/00 Molecular Biophysics.....                                              | 21 |
| 18. 3-FBF-013/11 Molecular Design.....                                                  | 22 |
| 19. 3-FBF-007/00 Molecular Dynamics of Biological Systems.....                          | 23 |
| 20. 3-FBF-701/10 Obtaining a University Grant.....                                      | 24 |
| 21. 3-FBF-950/15 Passing Dissertation Examination ( <b>state exam</b> ).....            | 25 |
| 22. 3-FBF-403/10 Presentation at a Home Conference.....                                 | 26 |
| 23. 3-FBF-401/15 Presentation at an International Conference.....                       | 27 |
| 24. 3-FBF-302/15 Publication in a Reviewed Periodical or Reviewed Almanac.....          | 28 |
| 25. 3-FBF-301/15 Publication in an A-category Periodical.....                           | 29 |
| 26. 3-FBF-706/15 Response to a Publication.....                                         | 30 |
| 27. 3-FBF-704/15 Response to a SCI-, WoK- or SCOPUS-registered Publication.....         | 31 |
| 28. 3-FBF-005/00 Selected Chapters from Human Biomechanics.....                         | 32 |
| 29. 3-FBF-802/15 Teaching Practice in the Summer Semester.....                          | 33 |
| 30. 3-FBF-801/15 Teaching Practice in the Winter Semester.....                          | 34 |
| 31. 3-FBF-002/00 Theoretical Methods of the Study the Molecular Systems.....            | 35 |
| 32. 3-FBF-808/15 Writing Final Thesis Assessment Protocol.....                          | 36 |

## COURSE DESCRIPTION

|                                                                                                                                                                                                                       |                                                                           |

| <b>Class syllabus:</b><br>Scattering and diffraction of X-ray, electrons and neutrons (Symmetry of crystals, cylindrical and helical objects, symmetry of viruses. Determination of the structure of crystals, problem of phase. Determination of the structure of amorphous substances and partially oriented systems. Preparation of samples for measurement. Experimental set up, available sources of synchrotron and neutron radiation)<br>Magnetic resonance methods (Magnetic resonance in a condensed matter. Nuclear magnetic resonance, electron paramagnetic resonance. Continual and pulse methods. Multiple resonance methods. Spectral methods, imaging methods and their combination. Preparation of samples and living objects for measurement. Experimental techniques, availability of experimental instruments).<br>Electron microscopy (Transmission and raster microscopy, electron optics. Preparation of samples for measurements. Reconstruction of the structure from micrographs. Experimental technique)<br>Ion microscopy. Light microscopy. (Transmission and reflection microscopy, in monochromatic, UV and IR light. Fluorescence, polarized and interference microscopy. Spatial reconstruction, stereology and analysis of images. Cytophotometry, autoradiography and autoradiography).<br>Optical spectroscopy (Light sources, spectral analysis, detectors of optical radiation. Absorption spectroscopy and Raman spectroscopy. Chiroptical methods. Emission spectroscopy)<br>Light scattering (Statics and dynamics light scattering and its application for determination of the shape of biological objects)<br>Preparative and analytical methods (Extraction, aggregation, sedimentation, membrane methods, chromatographic methods, electrophoresis, crystallization, lyophilization, solubilization. Determination of molecular weight. |                                                            |
| <b>Recommended literature:</b><br>V. Prosser et al.: Experimental methods of biophysics. Academia, Praha, 1989<br>Original and review articles from scientific journal of biophysical orientation according to selection of lecturer and according to actual interest of the students.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                            |

| <b>Learning outcomes:</b><br>The doctoral student acquires and develops competencies related to the methodology of scientific research, and he/she is able to apply the principles in the project outline, as well as to prepare and submit the research project proposal. In addition, the doctoral student will be able to critically appraise scientific papers from a methodological point of view.                                                                                                                                                                                                                                                                                                                     |                                                                                         |
| <b>Class syllabus:</b><br>Research project, the project plan: budget, time frame, endpoints, quality and risk assessments, benefits. Writing a project proposal, submission, legal and ethical aspects of biomedical research, project administration. Data collection, sorting and cleaning. Experimental designs: single-factor, completely randomized and randomized blocks design, grid, factorial, hierarchical designs. Fixed vs. random effects, main and simple main effects. Fitting models to biophysical and biomedical data. Interpretation of analytical outputs with respect to the methods and design used. Presentation and publication of project outputs. Project reporting: content and financial parts. |                                                                                         |
