COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KKM/100PE/21	Course title: Data Modeling in Management
Educational activities: Type of activities: lecture Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 3., 4..	
Educational level: III.	
Prerequisites:	
Course requirements: Students will prepare a project within which they will perform a separate data analysis, including its evaluation. Scale of assessment (preliminary/final): 100/0	
Learning outcomes: The course provides students with the opportunity to develop their skills of analysis of crosssectional, panel or. time data based on the use of modern statistical methods. Students process data using IBM SPSS software, Wolfram Mathematica, SAS, etc.	
Class syllabus: Probability distributions of one and more random variables. Simulation of one and multidimensional random variable values. Sample selection by stratification, clustering, bootstrap. Creating a sample from a given distribution, point and interval estimates (method of moments, method of maximum likelihood). Linear regression models, OLS, GLS. Logistic regression. PCA, factor analysis. Multidimensional regression method. Two-factor ANOVA. Bayesian estimates, decision trees. Markov chains. Stochastic processes, random walk model and market efficiency. Autoregressive models. Cointegration. Heteroskedastic conditioned models.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KSP/016PE/21	Course title: Operations Management and Logistics
Educational activities: Type of activities: seminar Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 3., 4., 5., 6..	
Educational level: III.	
Prerequisites:	
Recommended prerequisites: Completed course on Management	
Course requirements: The evaluation consists of two parts: (1) active participation 20%, (2) project 80%. The overall evaluation is in accordance with the faculty evaluation system: A = 91-100%, excellent; B = 81-90%, very good; C = 73-80%, good; D = 66-72%, satisfactory; E = 65-60%, sufficient; FX = 0-59%, insufficient.	
Learning outcomes: The course Operations Management and Logistics provides students of the doctoral's degree with knowledge from two areas, they closely correlate, management of production system and management of material flow. After successful completion of the course student will be able to: <ul style="list-style-type: none"> • Understand the importance and functions of operations management and explain the basic managerial terms and processes. • Apply systemic, professional, and creative approach to identify and address the problems and challenges in productivity improvement. • Understand the role of software systems for production planning and control. • Understand the core concepts of digital manufacturing and digital twin. • To apply principles of sustainable manufacturing. • Understand the importance and functions of logistics and supply chain management. • Understand the principles of purchasing, procurement, and sourcing in logistics. • Analyze the inventory and warehouse management systems. • Describe the new approaches in logistics transportation systems. • Describe new approaches to the use of information and communication technologies in logistics within the new direction of Logistics 4.0. 	
Class syllabus: <ol style="list-style-type: none"> 1. Characteristics of operations management and effective production system 2. Productivity management 3. ERP a MES systems 	

4. Digital production system and digital twin 5. Sustainable production system 6. Characteristics of logistics and supply chain management 7. Procurement and purchasing 8. Inventory management 9. COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KMn/040PE/21	Course title: Organizational Behavior
Educational activities: Type of activities: lecture Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 3., 4..	
Educational level: III.	
Prerequisites:	
Course requirements: 70% – Case study CS will be distributed to students by the lecturer. Execution of this task involves written solution of the given CS. Prescribed structure of the CS paper: 1. Short summary of the situation described in the CS 2. Identification of the main problems that need managerial attention and action 3. Description of the proposed changes that can solve the identified issues in the company 4. Executive summary, linking the suggested changes with relevant theoretical arguments (“back to theory” approach) 30% – Short paper Short scientific reflection on a selected concept from Organizational behavior (topic to be discussed with the lecturer). Five pages (excl. references). Summative theoretical overview and related critical analysis of the given concept. Scale of assessment (preliminary/final): 100 /0	
Learning outcomes: The course builds the ability of scientific and critical reflection and analysis of theoretical concepts from the field of OB. It leads students to use theoretical knowledge in solving real organizational problems that managers encounter. It develops the managerial and leadership potential of the students and the ability to solve problems associated with managing people and achieving organizational goals. Understanding and analyzing the complex relationship between the organization and employees and the factors that condition the behavior of people in organizations.	
Class syllabus: 1. OB as science. 2. Research methods utilized in OB. 3. Micro organizational behavior. 4. Macro organizational behavior. 5. Positive OB. 6. Positive employee behavior. 7. Dysfunctional employee behavior.	

8. New concepts in leadership.
9. Management development.
10. OB for the 21st century.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KIS/266PE/16	Course title: Research Methodology and Paper Writing
Educational activities: Type of activities: seminar Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 1.	
Educational level: III.	
Prerequisites:	
Course requirements:	
Learning outcomes: The successful student will demonstrate the ability to: <ul style="list-style-type: none"> • Present scientific information in appropriate language for various audiences, including scholarly and general, in print and online • Understand of the needs of various audiences/readerships and how these needs affect the style, vocabulary, and content of writing • Recognize the conventions governing the dissemination of scientific knowledge • Understand the origins of scientific writing styles • Write concisely, concretely, and accurately to present complex scientific ideas clearly • Expand information literacy (researching primary and secondary sources) for finding, evaluating, integrating and synthesizing ethically the necessary information and visuals for the completion of a project • Effectively and ethically incorporate appropriate scientific exhibits (visuals, graphs, charts, etc) for designing presentations and posters, and for supplementing text • Competence in the mechanics of writing is essential, including use of appropriate documentation styles. At the end of the course, students should be able to: <ul style="list-style-type: none"> • Distinguish different types of research, their audiences and how research material might be effectively presented • Prepare scientific and technical papers, and presentations • Format documents and presentations to optimize their visual appeal when viewed in-print, as a podcast or audio/video file format on the internet, or through personal presentations to an audience • Effectively use features of Microsoft Office to create eye-catching professional documents and presentations • Effectively use features of Microsoft Word, Powerpoint, and Excel to create professional looking tables, graphs and figures • Accept constructive criticism and use reviewers' comments to improve quality and clarity of written reports and presentations. 	

Class syllabus:**Course Description and Objectives:**

A course intended to give PhD students the skills necessary to write a thesis, and to prepare other professional materials for presentation or publication. Topics covered in this course include: searching the scientific literature; scientific writing style; writing graduate level papers, proposals, projects, and thesis components; preparing scientific presentations; presentation of data; using visual aids; and using word processing, spreadsheet, and presentation software.

Further, the course is designed to introduce students to basic scientific writing skills. Participants will review the general principles of clear, persuasive writing, and will apply these principles to writing for a scientific audience. Particular emphasis will be placed on conveying the significance of your research, outlining the aims, and discussing the results for scientific papers and grant proposals. The course will also provide an overview of the structure and style of scientific manuscripts.

Classes are highly interactive, and the majority of class time will be spent discussing student scientific writing. The goal of the course is to encourage active and open interaction among students. Ideal endpoints include improved self-editing, and development of effective strategies for offering and receiving concise editorial recommendations among peers.

The course aims to clarify the writing process and teach the fundamentals of effective scientific writing. Instruction will focus primarily on the process of writing and publishing scientific manuscripts but grant writing will also be addressed.

The course will take a multi-modal approach so that students can also work on presentations and posters, using visuals and graphics effectively to convey their message in the scholarly and public realm, including print and digital publishing sites, adapting the materials and texts as needed to become increasingly critical thinkers and writers, who can shape material effectively.

While working on clear, correct, concise style, the course will also address the evolution of scientific writing and conventions. A wide range of scientific fields will be addressed, with special emphasis on the field in which the student is working.

Designed for science and engineering students as well as writing minors.

Course Learning Objectives:

The following course learning objectives form the basis of successful pedagogy in this course. The goal of each assignment is to demonstrate mastery in one or more of the following areas:

- Model effective scientific and technical communication in the workplace by actively participating in writing activities, both individually and collaboratively.
- Apply technical information and knowledge in practical documents for a variety of a.) professional audiences (including peers and colleagues or management), and b.) public audiences.
- Write documents that demonstrate professional style: concise, clear, accurate, honest, economical, and unambiguous.
- Use professional writing strategies: Direct order organization, objective voice, unbiased analysis and summary, and use of transitional devices to create coherence.
- Recognize, explain, and use the rhetorical strategies and the formal elements of specific genres of technical communication, such as technical abstracts, data based research reports, instructional manuals, technical descriptions, web pages, wikis, and correspondence.
- Collect, analyze, document, and report research clearly, concisely, logically, and ethically; understand the standards for legitimate interpretations of research data within scientific and technical communities.
- Recognize and develop professional format features in print, html, and multimedia modes, as well as use appropriate nonverbal cues and visual aids.
- Revise and edit effectively in all assignments, including informal media (such as email to the instructor).

- Demonstrate professional work habits, including those necessary for effective collaboration and cooperation.

Focus Areas:

The core of this course consists of the following four skill areas:

- Research skills - using primary and library research to discover information
- Correspondence skills - learning the generic conventions of each
- Explanatory or demonstrative writing skills - to disseminate technical information to either nontechnical or technical readers, such as descriptions, instructions, informational handouts, international conferences
- Visual communication skills - may appear as separate assignments or as components of other assignments

I

I

Class syllabus:

Here is a list of topics that we plan to cover in this course. This list is the subject to change based on class progress and the lecturers' discretion.

Module-1: Introduction

- Research – What is it?
- How do researchers communicate?
- Examining examples of different types of scientific communication
- Introduction to concepts, investigation of scholarly and popular science writing categories, understanding the difference, rhetorical situation and audiences, disciplinary expectations, what counts as evidence

Module-2: Scientific Literature

- Searching the scientific literature
- Using online search engines
- What is a refereed journal?
- Plagiarism and how to avoid it
- Reading sample Lit Reviews as models of thinking and organizing material
- Work on Lit Review/Annotated bibliography to provide background for longer article
- Work on summary and analysis, rhetorical précis, abstracts, keywords
- Discover a research question and find the conversation to enter

Module-3: Beginning to Write

- Establishing your constraints
- Organizing your writing
- Preparing outlines
- Standard formats for scientific papers, research projects and theses style guides

Module-4: Content

- Creating a literature review
- Preparing other sections of a research report (abstract, introduction, materials and methods, results and discussion, conclusions)
- Including and summarizing research data
- Presentations/sharing of research report on scientific writing in the disciplines, scholarly and popular media
- Continued work on writing styles and correctness

Module-5: Style and grammar

- Scientific writing style
- First-person vs. Third-person; Passive vs. active voice
- Avoiding excessive wording

- Grammar
- Avoiding misuse of words
- When to use footnotes
- More reading. Polishing prose and adapting to audiences.

Module-6: Reference citations

- How to use references
 - Within the text
 - How to make lists of references

Module-7: Revising

- Dealing with revisions
- Accepting criticism
- Making sense of reviewers' comments
- Making the changes
- What to do if you do not agree with reviewers' comments

Module-8: Other communication and other types of scientific writing

- research proposals
- creating a fact sheet/bulletin
- articles for popular press
- memos, letters and emails

Module-9: Using Computer technologies

- Microsoft Word
 - Formatting (including margins, tabs, indents, justification, etc)
 - Using the table feature
 - Creating tables of content
- Microsoft Excel
 - Creating tables, charts, graphs

Module-10: Poster and Oral Presentations

- Organization and formats for posters
- Using Microsoft Powerpoint
- Designing and preparing slides for an oral presentation
- Importing tables, charts and graphs from Excel
- Optimizing pictures for use in presentations
- Using visual aids without overdoing it
- Using Microsoft Powerpoint

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Management	
Course ID: FM.KIS/266PE/17	Course title: Research Methodology and Paper Writing
Educational activities: Type of activities: seminar Number of hours: per week: per level/semester: 32s Form of the course: combined	
Number of credits: 8	
Recommended semester: 2.	
Educational level: III.	
Prerequisites:	
Course requirements:	
Learning outcomes: The successful student will demonstrate the ability to: <ul style="list-style-type: none"> • Present scientific information in appropriate language for various audiences, including scholarly and general, in print and online • Understand of the needs of various audiences/readerships and how these needs affect the style, vocabulary, and content of writing • Recognize the conventions governing the dissemination of scientific knowledge • Understand the origins of scientific writing styles • Write concisely, concretely, and accurately to present complex scientific ideas clearly • Expand information literacy (researching primary and secondary sources) for finding, evaluating, integrating and synthesizing ethically the necessary information and visuals for the completion of a project • Effectively and ethically incorporate appropriate scientific exhibits (visuals, graphs, charts, etc) for designing presentations and posters, and for supplementing text • Competence in the mechanics of writing is essential, including use of appropriate documentation styles. At the end of the course, students should be able to: <ul style="list-style-type: none"> • Distinguish different types of research, their audiences and how research material might be effectively presented • Prepare scientific and technical papers, and presentations • Format documents and presentations to optimize their visual appeal when viewed in-press, as a podcast or audio/video file format on the internet, or through personal presentations to an audience • Effectively use features of Microsoft Office to create eye-catching professional documents and presentations • Effectively use features of Microsoft Word, Powerpoint, and Excel to create professional looking tables, graphs and figures • Accept constructive criticism and use reviewers' comments to improve quality and clarity of written reports and presentations.
