TABLE OF CONTENTS

1. 1-FYZ-115/13	Algebra and Geometry (1).....	4
2. 1-OZE-344/22	Analytical Methods of Environmental Physics (1).....	6
3. 1-OZE-345/22	Analytical Methods of Environmental Physics (2).....	8
4. 2-FAA-152/14	Astrobiology.....	10
5. 1-UFY-241/10	Atomic and Nuclear Physics.....	12
6. 1-OZE-910/22	BSc Thesis.....	14
7. 1-OZE-991/22	BSc Thesis Defense (state exam).....	15
8. 1-KXX-004/20	Basic Chemical Calculation.....	16
9. 2-FOL-116/15	Basic Electronics.....	18
10. 1-KXX-014/20	Basic Laboratory Practice.....	20
11. 1-KXX-005/20	Basics of Chemistry (1).....	22
12. 1-KXX-015/20	Basics of Chemistry (2).....	24
13. 1-BMF-110/15	Basics of Mathematics (1).....	26
14. 1-KXX-007/20	Basics of Mathematics (1).....	28
15. 1-BMF-150/15	Basics of Mathematics (2).....	30
16. 1-KXX-017/20	Basics of Mathematics (2).....	32
17. 1-BMF-226/15	Basics of Mathematics (3).....	34
18. 1-BMF-261/22	Basics of Mathematics (4).....	36
19. 1-OZE-610/15	Basics of Radiation Physics and Radiation Protection.....	38
20. 1-AIN-407/22	Brain and Mind.....	40
21. 1-AIN-408/22	Cognitive Laboratory.....	42
22. 1-KXX-002/20	Complementary Classes in Mathematics (1).....	43
23. 1-KXX-012/20	Complementary Classes in Mathematics (2).....	45
24. 1-BMF-181/15	Complementary Classes in Mechanics.....	47
25. 1-KXX-001/20	Complementary Classes in Physics (1).....	49
26. 1-KXX-011/20	Complementary Classes in Physics (2).....	51
27. 1-FYZ-232/22	Computational Physics.....	53
28. 1-OZE-273/10	Dynamics of Flowing Gases.....	55
29. 1-FYZ-217/22	Electromagnetism.....	56
30. 1-MXX-233/13	English Conversation Course (1).....	58
31. 1-MXX-234/13	English Conversation Course (2).....	60
32. 1-MXX-131/00	English Language (1).....	62
33. 1-MXX-132/00	English Language (2).....	64
34. 1-MXX-231/00	English Language (3).....	66
35. 1-MXX-232/10	English Language (4).....	68
36. 1-OZE-151/22	Experimental Data Processing.....	70
37. 1-FYZ-401/22	Fields of Physical Research.....	72
38. 1-MXX-141/00	French Language (1).....	73
39. 1-MXX-142/00	French Language (2).....	74
40. 1-MXX-241/00	French Language (3).....	75
41. 1-MXX-242/00	French Language (4).....	76
42. 1-OZE-373/10	Fundamentals of Dynamic Meteorology.....	77
43. 1-OZE-201/22	Fundamentals of Environmental Physics.....	78
44. 1-OZE-954/15	Fundamentals of Environmental Physics (state exam).....	80
45. 1-OZE-303/22	Fundamentals of Meteorology and Climatology.....	81
46. 1-KXX-006/20	Fundamentals of Physics (1).....	83
47. 1-KXX-016/20	Fundamentals of Physics (2).....	85

48. 1-OZE-302/22	Fundamentals of Physics of Water.....	87
49. 1-OZE-301/10	Fundamentals of Physics of the Earth.....	88
50. 1-DAV-201/20	Fundamentals of Probability and Statistics.....	89
51. 1-FYZ-212/15	Fundamentals of Programming.....	91
52. 1-KXX-008/20	Fundamentals of Programming (1).....	93
53. 1-KXX-018/20	Fundamentals of Programming (2).....	95
54. 1-OZE-142/22	Fundamentals of the Environment.....	97
55. 1-OZE-241/22	General Chemistry.....	99
56. 1-OZE-374/15	Geographical Information Systems.....	100
57. 1-MXX-151/00	German Language (1).....	102
58. 1-MXX-152/00	German Language (2).....	103
59. 1-MXX-251/00	German Language (3).....	104
60. 1-MXX-252/00	German Language (4).....	105
61. 1-OZE-155/22	Hydrology and hydrogeology for environmentalist.....	106
62. 1-MXX-491/22	Inclusive Approaches to Education of Students with Special Educational Needs.....	107
63. 1-OZE-153/22	Inorganic chemistry.....	109
64. 1-OZE-341/10	Introduction to Physics of the Atmosphere.....	111
65. 1-OZE-377/22	Introduction to Plasma Physics and Electrical Discharges.....	112
66. 1-FYZ-452/22	Introduction to Solid State Physics.....	113
67. 1-AIN-112/22	Introduction to Web Technologies.....	115
68. 1-KXX-003/20	Laboratory Practicals in Physics (1).....	117
69. 1-KXX-013/20	Laboratory Practicals in Physics (2).....	119
70. 1-AIN-406/22	Language and Cognition.....	121
71. 1-AIN-500/22	Linux for Users.....	123
72. 1-FYZ-116/22	Mathematical Methods in Physics (1).....	125
73. 1-FYZ-117/22	Mathematical Methods in Physics (2).....	127
74. 1-BMF-113/16	Mechanics.....	129
75. 1-OZE-152/22	Molecular Physics.....	131
76. 1-OZE-305/22	Nuclear and Fossil Energy and their Environmental Aspects.....	133
77. 1-OZE-275/15	Physical Aspects of a Geographical System.....	135
78. 1-MXX-110/00	Physical Education and Sport (1).....	136
79. 1-MXX-120/22	Physical Education and Sport (2).....	138
80. 1-MXX-210/00	Physical Education and Sport (3).....	140
81. 1-MXX-220/00	Physical Education and Sport (4).....	141
82. 1-MXX-310/00	Physical Education and Sport (5).....	142
83. 1-MXX-320/22	Physical Education and Sport (6).....	143
84. 1-OZE-953/15	Physics (state exam).....	144
85. 1-OZE-372/10	Practical Training in Radiometry and Spectrometry.....	145
86. 1-FYZ-322/22	Practical in atomic and nuclear physics.....	147
87. 1-FYZ-222/22	Practical in electricity and magnetism.....	149
88. 1-FYZ-221/22	Practical in mechanics and molecular physics.....	151
89. 1-FYZ-321/22	Practical in optics.....	153
90. 1-BMF-310/00	Quantum Mechanics.....	155
91. 1-OZE-304/22	Renewable Energy Sources.....	156
92. 1-MXX-161/00	Russian Language (1).....	158
93. 1-MXX-162/00	Russian Language (2).....	159
94. 1-MXX-261/00	Russian Language (3).....	160
95. 1-MXX-262/00	Russian Language (4).....	161

96. 2-IKVa-192/19	Science, Technology and Humanity: Opportunities and Risks.....	162
97. 1-OZE-920/10	Seminar in BSc Project.....	164
98. 1-MAT-715/15	Seminar in MS-Office.....	166
99. 1-MAT-770/15	Seminar in TEX.....	167
100. 1-MXX-171/20	Slovak Language for Foreign Students (1).....	169
101. 1-MXX-172/20	Slovak Language for Foreign Students (2).....	170
102. 1-MXX-271/20	Slovak Language for Foreign Students (3).....	171
103. 1-MXX-272/20	Slovak Language for Foreign Students (4).....	172
104. 1-MAT-733/19	Software MATLAB.....	173
105. 1-MXX-115/15	Sports in Nature (1).....	175
106. 1-MXX-215/15	Sports in Nature (2).....	177
107. 1-MXX-216/18	Sports in Nature (3).....	179
108. 1-MXX-217/18	Sports in Nature (4).....	181
109. 1-MXX-133/18	Supplementary English Course (1).....	183
110. 1-MXX-134/18	Supplementary English Course (2).....	185
111. 1-FYZ-251/15	Theoretical Mechanics.....	187
112. 1-BMF-351/15	Thermodynamics and Statistical Physics.....	189
113. 1-TEF-211/19	Thermophysics.....	191
114. 1-UFY-210/22	Waves and Optics.....	192

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAG/1-FYZ-115/13	Course title: Algebra and Geometry (1)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 3 / 1 per level/semester: 39 / 13 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 3.	
Educational level: I.	
Prerequisites:	
Course requirements: Continuous assessment: test Examination: written and oral examination Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 20/80	
Learning outcomes: After completing the course the student will master the basic concepts and methods of linear algebra will be able to use them in geometry and physics.	
Class syllabus: Sets and representations, fields and vector spaces, basics of matrix calculus, systems of linear equations, linear subspaces and linear independence, basis and dimension, linear representations, matrix of linear representation, inverse matrices and transition matrices, base change, affine subspaces, determinants.	
Recommended literature: Linear Algebra and Geometry: A Journey of Three Dimensions with Overlaps in Related Fields / Pavol Zlatoš. Bratislava: Albert Marenčin, 2011; electronic version available at http://thales.doa.fmph.uniba.sk/zlatos/la/LAG_A4.pdf We grow linear algebra / Luboš Motl, Miloš Zahradník. Prague: Karolinum, 2002 Lectures on Linear Algebra and Geometry / Július Korbaš, Štefan Gyurki. UK Publishing House, Bratislava, 2013	
Languages necessary to complete the course: Slovak, English	
Notes:

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAFZM/1-OZE-344/22	Course title: Analytical Methods of Environmental Physics (1)
Educational activities: Type of activities: course Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 7.	
Educational level: I.	
Prerequisites:	
Course requirements: Preliminary evaluation: Final exam: oral / written Indicative evaluation scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 10/90	
Learning outcomes: The student will gain knowledge of analytical methods used in environmental physics to analyze gases, liquids and solids, specifically to determine the composition and quality of air and water. The course will also include a demonstration of equipment in laboratories and analysis of selected samples.	
Class syllabus: Introduction to spectroscopy and chromatography. Infrared absorption and Raman scattering spectroscopy. Ultraviolet absorption spectroscopy and colorimetry. Fluorescence spectroscopy. Chemiluminescence. Electrochemical methods. Gas chromatography. Theory of rotational, vibrational and electron spectra. Composition of spectrometers - radiation sources, monochromators, interferometers and detectors. Sample preparation and analysis by transmission and reflection techniques. Spectrum manipulation, adjustment and interpretation. Classification of chromatographic methods. Chromatograph composition. Separation principles. Columns and detectors. Quantification. Monitoring of pollutants in gaseous and aqueous media and sampling. Demonstration of some equipment, techniques and analysis of selected samples.	
Recommended literature: S.K. Dogra: Molecular spectroscopy, Tata McGraw Hill (2012) B. C. Smith: Fundamentals of FTIR, CRC Press (1996) J. R. Lakowicz: Principles of fluorescence spectroscopy, Springer (2006) H. M. McNair and J. M. Miller: Basic gas chromatography, Wiley (2009)	
Languages necessary to complete the course:	

Slovak in combination with English (some of the suggested readings are in English).

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB+KAFZM/1-OZE-345/22	Course title: Analytical Methods of Environmental Physics (2)
Educational activities: Type of activities: course Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 8.	
Educational level: I.	
Prerequisites:	
Course requirements: Interim evaluation: homework / essay Exam: Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 80/20	
Learning outcomes: Students will gain knowledge about the use of accelerated ion beams for sample analysis. Students will get acquainted with the basic methods of atmospheric analysis.	
Class syllabus: Get acquainted with the system for ion production, acceleration and separation. Students will use accelerated ions for elemental analysis of samples using PIXE (particle induced X-ray emission), PIGE (particle induced gamma-ray emission) and RBS (Rutherford Backscattering Spectrometry) methods. They will get acquainted with the methods used for analysis of the atmosphere, which is characterized by meteorological elements. Measurement and analysis of air temperature and humidity, wind speed and direction, atmospheric pressure, precipitation, cloud cover, solar radiation and visibility.	
Recommended literature: Y. Wang a M. Nastasi: Handbook of Modern Ion Beam Materials Analysis, 2nd Edition, Materials Research Society (2009) General and regional climatology / Milan Lapin, Ján Tomlain. Bratislava : Univerzita Komenského, 2001 Guide to Instruments and Methods of Observation, Volume I –Measurement of Meteorological Variables, WMO-No.8	
Languages necessary to complete the course: Slovak in combination with English (literature in English)

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAFZM/2-FAA-152/14	Course title: Astrobiology
Educational activities: Type of activities: lecture Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 4.	
Educational level: I., II.	
Prerequisites:	
Course requirements: Continuous Assessment : project and presentation (50%), assignments/tests after chapters/blocks (40%), activity/participation during the lectures (10%). Approximate scale of final grades: A = at least 90%, B = at least 80%, C = at least 70%, D = at least 60%, E = at least 50%, Fx = below 50% Scale of assessment (preliminary/final): 100/0	
Learning outcomes: The aim of this course is to provide students with up-to-date knowledge of astronomical and biological aspects of the origin of life including conditions required to harbor life on our home planet and elsewhere in the universe.	
Class syllabus: Astrobiology as a research field - introduction. Stars, planets, exoplanets. Conditions on early Earth. Comets and asteroids – sources of organic compounds. Habitable zone and terrestrial planets (HZ definition, search for life on Mars). Other life-supporting regions in the Solar system. Conditions for emergence of life on early Earth – biogenic elements and their origin in nucleosynthesis, water – mandatory but not sufficient condition for life as we know it, evidence of the first life forms, alternatives to water-carbon based life. Abiogenesis – RNA, LUCA and central dogma of molecular biology. Evolution and domains of life. Impacts and global cataclysms, major extinctions. Influence of the Moon on the stability of the biosphere. Physical and chemical limits of the biosphere - extremophiles. Biosignatures and their observation in space. Emergence of complex and intelligent life. Drake's equation and its relevance for astrobiology. Fermi's paradox. Extraterrestrial civilizations and impacts of their potential discovery.	
Recommended literature: COCKELL, CH. S.: Astrobiology – Understanding Life in the Universe (2nd edition), Hoboken: Wiley-Blackwell (2020). DOMAGAL-GOLDMAN, S. D. – WRIGHT, K.E. et al.: The Astrobiology Primer v 2.0., Astrobiology, 16 (2016).	

GARGAUD, M. – LÓPEZ-GARCIA, P. – HERVÉ, M.(eds.): Origins and Evolution of Life: An Astrobiological Perspective, Cambridge, UK: Cambridge University Press (2011).
 ROTHERY, D. – GILMOUR, I. – SEPHTON, M.: An Introduction to Astrobiology, Cambridge, UK: Cambridge University Press (2018).

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB/1-UFY-241/10	Course title: Atomic and Nuclear Physics
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 3 / 1 per level/semester: 39 / 13 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 6.	
Educational level: I.	
Prerequisites:	
Course requirements: Continuous assessment: presentation of homework results (3x10 marks) Exam: written (40 marks), oral (30 marks) Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Credits will be awarded if the student obtains at least 50% points.	
Learning outcomes: Graduates have a basic knowledge of Atomic and Nuclear Physics at the level of a core university course in general physics. They know how to use the concepts and methods of atomic and nuclear physics in solving problem situations. They have an idea of the boundaries between high school and university physics in the field of nuclear and nuclear in terms of work with high school youth with an increased interest in physics.	
Class syllabus: Photoelectric effect, Compton effect, Rutherford experiment, Bohr model, timeless Schrödinger equation, structure of atoms and molecules, basic properties of nuclei, structure of nuclei, transformation of nuclei, nuclear reactions, nuclear power plant, particle accelerators.	
Recommended literature: Fyzika část 5. Moderní fyzika : Vysokoškolská učebnice obecné fyziky / David Halliday, Robert Resnick, Jearl Walker ; přeložili Bohumila Lencová ... [et al.]. Brno : Vysoké učení technické VUTUM, 2000 Všeobecná fyzika : 4 : atómová fyzika / Ján Vanovič. Bratislava : Alfa, 1980 Physics : principles with applications / Douglas C. Giancoli. Upper Saddle River, N.J. : Pearson/Prentice Hall, 2005 Own electronic texts of the subject published through the course website.	
Languages necessary to complete the course: Slovak and English.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI-PriF.KBCh/1-KXX-004/20	Course title: Basic Chemical Calculation
Educational activities: Type of activities: seminar Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: Two written test with 30 and 70 points during the semester. A: 90%, B: 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0	
Learning outcomes: Overview of high school curriculum: types of chemical formulas, methods of expressing the amount of chemical substances, composition of solutions, definition and determination of oxidation number and its use in nomenclature and redox reactions. Learn to write non-redox and redox chemical reactions. Mastering stoichiometric calculations.	
Class syllabus: Basic quantities used in chemical calculations: amount of substance, volume, mass, the number of particles. The relationship between the amount of substance and the volume of an ideal gas. Quantities expressing the composition of solutions. Calculations with mass fraction and mass concentration. Balance equations. Calculations with molality, volume fraction and mass concentration. Recalculations of different ways of composition of solutions. Solubility and preparation of saturated solutions. Stoichiometry of chemical compounds. Stoichiometry of chemical equations.	
Recommended literature: Silný, P. a kol.: Úlohy a modely usmerňovania úloh zo všeobecnej chémie. Expol Pedagogika, 1999. COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KEF/2-FOL-116/15	Course title: Basic Electronics
Educational activities: Type of activities: lecture / laboratory practicals Number of hours: per week: 3 / 3 per level/semester: 39 / 39 Form of the course: on-site learning	
Number of credits: 7	
Recommended semester: 7.	
Educational level: I., II.	
Prerequisites:	
Course requirements: Continuous assessment: work on practical exercises (100%). The condition for granting credits is the presentation of a semester project. Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0	
Learning outcomes: The student will understand the principles of using basic building blocks (resistor, inductance, capacitance, diode, transistor) in digital and analog circuits. They will understand the principles and use of basic digital and analog circuits (gates, counters, timers, operational amplifier, A / D and D / A converters, Arduino microprocessor system), principles of generating harmonic and non-harmonic signals and linear and pulse power supplies. They will be able to analyze basic circuits and use them to design simple electronic circuits with the required functionality. He will also gain practical experience with the construction and revitalization of simple electronic circuits.	
Class syllabus: Semiconductor diode and transistor and their basic connections. Transistor in switching mode, TTL digital circuits and their use. Basic logic circuits. Comparator. Timer 555. D / A and A / D converters. Arduino microprocessor system. Nodal potential method. Analysis of linear circuits in time and frequency domain. Linear model of transistor and operational amplifier. Basic circuits with operational amplifier. Positive feedback and oscillator principles. Power supplies and rectifiers.	
Recommended literature: The art of electronics / Paul Horowitz, Winfield Hill. New York : Cambridge University Press, 1989

COURSE DESCRIPTION

Academic year: 2022/2023					
University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI-PriF.KJCh/1-KXX-014/20		Course title: Basic Laboratory Practice			
Educational activities: Type of activities: practicals Number of hours: per week: 4 per level/semester: 52 Form of the course: on-site learning					
Number of credits: 4					
Recommended semester: 2.					
Educational level: I.					
Prerequisites:					
Course requirements: Regular tests and written protocols. A:90%, B:80%, C:70%, D:60%, E:50% Scale of assessment (preliminary/final): 100/0					
Learning outcomes: While working in the laboratory, the student will gain basic practical experience and skills in a chemical laboratory.					
Class syllabus: Physical quantities and units. Laboratory glassware. Weighing, measuring the volume of liquid. Preparation and dilution of solutions. Quantitative analysis. Basic laboratory operations (crystallization, filtration, decantation, drying, etc.)					
Recommended literature: Nagyová I., Melichová Z., Kmeťová J.: Laboratórna technika. FPV UMB, Banská. Bystrica, 2010. Tatiersky J.: Základné chemické výpočty. UK, Bratislava, 2011. Galamboš M., Tatiersky J., Krivosudský L. a kol.: Názvoslovie anorganických látok. UK, Bratislava, 2021. Fajnor, V., Luptáková, V. a Tatiersky, J.: Cvičenia z anorganickej chémie pre biológov. 2. vyd. Bratislava : UK, 2003.					
Languages necessary to complete the course: Slovak, English

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI-PriF.KAgCh/1-KXX-005/20	Course title: Basics of Chemistry (1)
Educational activities: Type of activities: lecture / seminar Number of hours: per week: 2 / 3 per level/semester: 26 / 39 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: Regular tests, final exam. A:92%, B:84%, C:76%, D:68%, E:60%	
Learning outcomes: The student is able to define concepts, quantities and laws in the field of chemistry, can explain the principles of chemical processes, apply knowledge in solving chemical problems related to everyday life. He/she knows the connections between the composition, structure and properties of substances.	
Class syllabus: Basic concepts and most important constants. Atomic nucleus; nuclear transformations; nuclear reactions. Electron shell of an atom; quantum numbers, orbitals, electron configuration of chemical elements. Periodic table of elements, classification of elements. Strong and weak interactions between particles, chemical bonding. Electronegativity of an atom. Oxidation number. Nomenclature. Charge number. Binding polarity. Molecule structure; localized electron pair theory. Polarity of molecules and substances. Isomerism. Group states of substances. Systems of substances - pure substance, element, compound, mixture. Solutions; composition of solutions. Chemical reactions, chemical equations. Types of chemical reactions. Thermodynamics and rate of chemical reactions, chemical equilibrium. Acids and bases, acid-base reactions, hydrolysis of salts. The concept of pH, strength and saturation of acids and bases. Redox reactions. Precipitation reactions. Complexation reactions.	
Recommended literature: Galamboš, M. a i.: Názvoslovie anorganických látok. 2. oprav. a rozš. vyd. Bratislava: Univerzita Komenského, 2011. Žúrková, Ľ. a i.: Všeobecná chémia. 1. vyd. Bratislava : SPN, 1985. Krätsmár-Šmogrovič a kol.: Všeobecná a anorganická chémia, vyd. Martin, Osveta 2007.	
Languages necessary to complete the course: Slovak, English

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI-PriF.KAgCh/1-KXX-015/20	Course title: Basics of Chemistry (2)
Educational activities: Type of activities: lecture / seminar Number of hours: per week: 2 / 3 per level/semester: 26 / 39 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 2.	
Educational level: I.	
Prerequisites:	
Course requirements: Regular tests, final exam. A:92%, B:84%, C:76%, D:68%, E:60%	
Learning outcomes: The student will gain basic knowledge about common chemical elements and their compounds, will know their properties, use in everyday life and their impact on living organisms and the environment. He knows the basic division of organic substances, their properties and impact on the environment.	
Class syllabus: 1. Hydrogen, alkali metals, alkaline earth metals, water, water hardness. 2. Aluminum, carbon, silicon, nitrogen, phosphorus, greenhouse gases, glass and ceramics. 3. Oxygen, sulfur, ozone, acid rain. 4. Halogens, rare gases. 5. Chromium, manganese, iron, steel, corrosion. 6. Copper subgroup and zinc subgroup, amalgam. 7. Characteristics and distribution of organic substances 8. Bonding of atoms, chemical formulas of organic compounds, nomenclature 9. Acid-base equilibria in organic chemistry, electron effects 10. Hydrocarbons 11. Hydrocarbon derivatives (X, OH, N) 12. Hydrocarbon derivatives (C=O)	
Recommended literature: Silný P., Brestenská, B. Prehľad chémie 1, SPN, 2000. Zahradník, P., Kollárová, M. Prehľad chémie 2, SPN, 2002. Krätsmár-Šmogrovič a kol.: Všeobecná a anorganická chémia, vyd. Martin, Osveta 2007

Course ID: FMFI.KMANM+KJFB/1-BMF-110/15	Course title: Basics of Mathematics (1)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 4 / 4 per level/semester: 52 / 52 Form of the course: on-site learning	
Number of credits: 8	
Recommended semester: 3.	
Educational level: I.	
Prerequisites:	
Course requirements: Preliminary evaluation: 3 written partial exams (100%) Final exam: oral (45%) / written (55%) Indicative evaluation scale: A 90%, B 80%, C 70%, D 65%, E 55% Scale of assessment (preliminary/final): 40/60 Scale of assessment (preliminary/final): 40/60	
Learning outcomes: After completing the course, students will gain basic knowledge and skills of linear algebra and geometry and differential calculus for functions of one real variable.	
Class syllabus: Linear algebra and geometry (determinants, matrices, systems of linear equations, linear spaces, linear mappings, scalar and cross products, quadratic forms). Differential calculus for functions of one real variable (limits and continuity, the derivative and differentiability, main theorems of the differential calculus and their consequences, Taylor's formula, graphing a function).

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAG/1-KXX-007/20	Course title: Basics of Mathematics (1)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 26 / 26 Form of the course: on-site learning	
Number of credits: 6	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: The student can get 50% for exercises and 50% for the final exam. The student must obtain at least half of the points for the exercises in order to pass to the final exam. During the teaching part of the semester, the student obtains points via written homework assignments. The final exam consists of a passfail test (10%) and a regular test (20% examples, 20% theoretical questions). Successful completion (8 points out of 10 points) of the passfail test is a necessary condition for admission to the regular test. To successfully pass the final exam, it is necessary to obtain at least half of the points together for both of the final exam tests. Grading: A (100-92), B (91-84), C (83-76), D (75-68), E (67-60), Fx (<60). Scale of assessment (preliminary/final): Preliminary assessment 50% (written homework assignments) / 50% final exam (10% passfail and 40% regular test).	
Learning outcomes: Students will gain the necessary skills in manipulation with numbers, mathematical expressions, elementary functions. They will expand their knowledge of geometry.	
Class syllabus: 1. Mathematical terminology and mathematical logic. Basics of proper mathematical expression and designation. 2. Logical formulae and proofs. Types of mathematical proofs illustrated in elementary examples. 3. Sets and number sets (basic operations with numbers and expressions, numbers, various notations, fractions). Numbers and their geometric representation on a line (absolute value and its geometric meaning). 4. Elementary number theory, divisibility, prime numbers, compound numbers. 5. Expressions, linear and quadratic expressions with variables. Properties of mathematical operations (commutation, distribution, simplification, etc.) 6. Elementary functions (polynomial, linear, quadratic, n-th power and n-th root, trigonometric, exponential, logarithmic functions, their properties and calculation). The graph of a real function and its basic properties.	

7. Equations and inequalities of one variable (linear and quadratic, with absolute value, with n-th power and n-th root, trigonometric, exponential, logarithmic). Calculator vs. adjustment before enumeration.

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KMANM+KJFB/1-BMF-150/15	Course title: Basics of Mathematics (2)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 4 / 4 per level/semester: 52 / 52 Form of the course: on-site learning	
Number of credits: 8	
Recommended semester: 4.	
Educational level: I.	
Prerequisites: FMFI.KMANM+KJFB/1-BMF-110/15 - Basics of Mathematics (1)	
Recommended prerequisites: 1-BMF-110 Basics of mathematics (1)	
Course requirements: Preliminary evaluation: 3 written partial exams (100%) Final exam: oral (45%) / written (55%) Indicative evaluation scale: A 90%, B 80%, C 70%, D 65%, E 55% Scale of assessment (preliminary/final): 40/60	
Learning outcomes: After completing the course, students will gain basic knowledge and skills of differential calculus for functions of several variables, integral calculus for functions of one variable, convergence of series and elementary methods of solving ordinary differential equations.	
Class syllabus: Differential calculus for vector-valued functions of one real variable, differential calculus for functions of several real variables (limits and continuity, partial derivative and differentiability, Taylor's formula, extremal points, implicit functions, constrained critical points). Integral calculus for functions of one real variable (indefinite integral, Riemann's definite integral, improper integral). Series, elementary methods of solving ordinary differential equations.

Scale of assessment (preliminary/final): Preliminary assessment 50% (written homework assignments) / 50% final exam (10% passfail and 40% regular test).	
Learning outcomes: Students will acquire the necessary skills in mathematical operations with complex numbers, combinatorics, basics of probability and statistics, and analytical and synthetic geometry in the plane and space.	
Class syllabus: 8. Basics of calculating sequences and series (arithmetic and geometric sequence, partial sums) and their applications. 9. Linear equations and inequalities with two or three unknowns and their solutions. Equation and inequalities with parameters. 10. Elementary analytical geometry in the plane (vectors, lines, triangle, polygon, circle, conic section, scalar product) and its relationship with solutions of equations. Isometries and similarities in plane. 11. Elementary analytical geometry in space (planes, vector product). Basic bodies and their imaging. 12. Complex numbers, calculations and their geometric properties (representations, basic operations, complex n-th power and n-th root, Moivre's theorem) 13. Basic combinatorial procedures without using the traditional formulae	

14. Basic concept of probability and statistics (reading diagrams and understanding of basic statistical indicators, basic understanding of the relationship between truth and statistical indicator)					
15. Limits via geometric and computational methods (basic rules of calculating limits, derivatives of elementary functions, graphs of functions and their properties)

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB/1-OZE-610/15	Course title: Basics of Radiation Physics and Radiation Protection
Educational activities: Type of activities: lecture Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 6.	
Educational level: I.	
Prerequisites:	
Course requirements: Final exam: written Indicative evaluation scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 0/100	
Learning outcomes: Graduates of the course will acquire a basic knowledge of radiation physics and the principles of radiation protection and will also gain a comprehensive view of the applications of ionizing radiation in practice.	
Class syllabus: Basic concepts of nuclear physics: simple nuclear model, stable and radioactive nuclei, nuclear reactions, excited nuclear and atomic states. Sources of ionising radiation: radionuclide sources, nuclear reactors, accelerators as sources of ionising radiation. Processes of interaction of ionizing radiation with matter: interaction of gamma and X-rays, charged particles and neutrons with the material environment. Quantities and units in radiation physics and protection: quantities characterising radiation sources, radiation fields, the effect of radiation on matter, relationships between radiation quantities. Biological effects of ionising radiation and their impact on health. Environmental radioactivity: sources of radioactivity, distribution of radionuclides in nature, radiotoxicity. Applications of ionising radiation: medical diagnostics and therapy, nuclear power, industrial radiation sources, radioactive dating. Radioactive waste. Basic principles of radiation protection. Radiation protection of workers, population and the environment. Dose limits. Monitoring in radiation physics and protection.	
Recommended literature: O.Holá, K.Holý: Radiačná ochrana- Ionizujúce žiarenie, jeho účinky a ochrana pred ionizujúcim žiarením. STU, Bratislava,2010. V.Klener: Principy a praxe radiační ochrany, SUJB, Praha, 2000

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAI/1-AIN-407/22	Course title: Brain and Mind
Educational activities: Type of activities: course Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 1., 3., 5.	
Educational level: I.	
Prerequisites:	
Course requirements: Continuous assessment: presence (30%), presentation (40%), bonus assignments (30%) Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0	
Learning outcomes: The course objectives are to make the students familiar with major theories and methods of mind/brain research.	
Class syllabus: The subject of the course is the human mind and brain from the perspective of neuroscience, computer science, psychology, and philosophy. It is mainly focused on the interdisciplinary study of consciousness: its neural correlates, neuroscience and behavioral research methods, and major theories.	
Recommended literature: S. Blackmore, E.T. Troscianko: Consciousness. An Introduction. Routledge, third edition 2018. M.S. Gazzaniga, R.B. Ivry, G.R. Mangun: Cognitive Neuroscience. Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KAG/1-KXX-002/20		Course title: Complementary Classes in Mathematics (1)			
Educational activities: Type of activities: practicals Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning					
Number of credits: 2					
Recommended semester: 1.					
Educational level: I.					
Prerequisites:					
Course requirements: Homeworks (written solutions of problems and their consulting 100%). Rough evaluation scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0					
Learning outcomes: Students gain basic skill in computation with numbers, mathematical expressions, elementary functions. They extend the knowledge on elementary geometry.					
Class syllabus: 1. Basic operations with numbers and expressions (numbers, notation, fractions, linear and quadratic expressions with variables, commutativity, distributivity, simplification, etc.) 2. Relations of numbers and their geometric representation on a straight line, absolute value and its geometric significance, equations and inequalities with one variable and absolute value 3. Elementary functions (polynomials, roots, sin, cos, exp, ln) and their relations, properties and computing with them, equations and inequities, calculator vs. adjustment before enumeration. 4. Linear equations with two, three unknowns and their solution 5. Elementary analytical geometry in plane and space (vectors, straight lines, plane, triangle, circle, cone, solids) and link with the solutions of equations					
Recommended literature: Lecturer materials.					
Languages necessary to complete the course: English					
Notes:

Course requirements: Preliminary evaluation: tests Final exam: test Indicative evaluation scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 20/80					
Learning outcomes: After completing the course, students will be much more experienced with the formulation and mathematical expression of selected problems in mechanics.					
Class syllabus: Translational motion. Rotational motion. Newton's laws of dynamics, force, momentum. Gravitational field. Work, kinetic and potential energy, moment of force, angular momentum. Conservation laws in mechanics. Rigid body mechanics, center of gravity, moment of inertia, Steiner's theorem, rotational motion. Fluid mechanics. Oscillations - free, damped and driven, resonance.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KDMFI/1-KXX-001/20	Course title: Complementary Classes in Physics (1)
Educational activities: Type of activities: practicals Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: A:90%, B:80%, C:70%, D:60%, E:50% Scale of assessment (preliminary/final): 100/0	
Learning outcomes: Students will develop skills to solve complex physical problems at the level corresponding to the target requirements for the high-school final examination in physics in the areas listed in the brief syllabus.	
Class syllabus: Complex problems in the context of water (hydrostatic force in a liquid, Archimedes' law, continuity equation for liquids and gases, Bernoulli's equation for liquids, resistive force when moving a solid in a liquid) Complex tasks in the context of electricity and magnetism (motion of a charged particle in a homogeneous electric and in a homogeneous magnetic field, motion of a conductor in a magnetic field, motion of a magnet in a coil) Complex tasks in the context of sound (origin of sound, speed of sound propagation, equation of gradual waves, standing waves on a stretched string and on an air column, sound interference) Complex tasks in the contexts of photoelectric effect and X-rays.	
Recommended literature: Fyzika pre gymnázium - všeobecnovzdelávací kurz : Experimentálny učebný text pre všeobecnovzdelávací program vyučovania fyziky v prvých dvoch ročníkoch štvorročného gymnázia. (Pracovná verzia) / Viera Lapitková, Václav Koubek, Peter Demkanin. Bratislava : Knižničné a edičné centrum FMFI UK, 2006 Fyzika pre 2. ročník gymnázia a 6. ročník gymnázia s osemročným štúdiom / Peter Demkanin ... [et al.]. Educational activities: Type of activities: lecture / practicals Number of hours: per week: 1 / 2 per level/semester: 13 / 26 Form of the course: on-site learning					
Number of credits: 4					
Recommended semester: 6.					
Educational level: I.					
Prerequisites:					
Course requirements: Continuous assessment: elaboration of homework for individual lectures. Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0					
Learning outcomes: The graduate of the course will acquire the skills necessary for the numerical solution of simple physical problems and will learn the basic algorithms of numerical calculations and their programming in a programming language (C ++, Python, ...).					
Class syllabus: Numerical stability of simple iteration schemes. Transition from a continuous problem to a discrete one. Numerical solution of the wave equation. Nonlinear iteration schemes. Numerical calculation of integrals. Random numbers. Differential equations: Runge-Kutta methods. Systems of differential equations. Simple physical models, firing method, time evolution of nonlinear physical models, Brownian motion. Simple integral equation, Optimization.

Course requirements: Continuous assessment: written work Exam: oral + written Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 50/50					
Learning outcomes: By completing the course, the student will understand the basic laws applicable to electric and magnetic fields and will be able to apply them in solving problems.					
Class syllabus: Electrostatics of charges in vacuum, in the presence of conductors and in dielectrics. Coulomb's law, Gauss's law, electric potential, calculation of electric fields. Electric current, Ohm's law, Kirchhoff's laws. Magnetism and electric currents. Biotov-Savart-Laplace law, Ampere's law, magnetic vector potential, magnetic field in magnetic material, calculation of magnetic fields. Electromagnetic induction, Lenz's rule, inductance and mutual inductance. Alternating electric currents, RLC circuits. Relativity of electric and magnetic field. Electromagnetic waves, Poynting vector.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJP/1-MXX-131/00	Course title: English Language (1)
Educational activities: Type of activities: practicals Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: Grades: A 93%, B 85%, C 77%, D 70%, E 65% Course prerequisites: https://fmph.uniba.sk/microsites/kjp/katedra-jazykovej-pripravy/poziadavky-na-udelenie-priebežneho-hodnotenia-aj1aj2aj3-ostatne-kurzy/ Scale of assessment (preliminary/final): 100/0	
Learning outcomes: The objective of the subject is to provide the students with experience and knowledge of technical English and thus make them ready to use English sources of information for later study and professional career.	
Class syllabus: On entering the first semester, students' knowledge of English is tested and they are divided into groups according to the results of the placement test. In the groups of pre-intermediate and intermediate students, fundamentals of technical English are taught. Advanced students take classes of technical English for their field of study: English for mathematics, for physics, for computer science, English for management and economic and financial mathematics.	
Recommended literature: Anglický jazyk pre študentov FMFI UK : Kurz pre mierne pokročilých / Alena Zemanová. The textbook has not been published. It is at students' disposal in an electronic format. Anglický jazyk pre študentov FMFI UK : Aplikovaná matematika / Alexandra Maďarová, Ľubomíra Kožehubová. The textbook has not been published. It is at students' disposal in an electronic format. Anglický jazyk pre študentov FMFI UK : Matematika / kolektív autorov KJP. The textbook has not been published. It is at students' disposal in an electronic format. COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB/1-OZE-151/22	Course title: Experimental Data Processing
Educational activities: Type of activities: lecture Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 4.	
Educational level: I.	
Prerequisites:	
Antirequisites: FMFI.KJFB/1-OZE-151/15	
Course requirements: Exam: written and oral exam, successful completion of the written part is condition of the oral part. Share in the overall rating: 80/20. Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 0/100	
Learning outcomes: After completing the course, students will be able to master the basic theoretical principles and gain practical experience in evaluating data from physical experiments.	
Class syllabus: Sources of measurement uncertainties. Characteristics of statistical files (averages, dispersion, ...). Dispersion folding rule, correlation coefficient. Some statistical distributions and their occurrence in the measurement. Multiplication factors to determine the interval width of the standard deviation distribution. Spreading uncertainties. Evaluation of functional dependencies, Estimates, method of maximum likelihood, stratified sampling, Least squares method for straight line, and generally linear and nonlinear functions, weighting coefficients. Calibration by regression method, prediction bands, uncertainty of the quantity determined from the calibration curve, critical level, detection limit, Hypothesis testing, interpretation of experiments, null hypothesis, Poisson statistics - what is a signal?).	
Recommended literature: L. Kubáčková, Metódy spracovania experimentálnych údajov, Veda, Bratislava, 1990 R. Barlow, Statistics (A Guide to the Use of Statistical Methods in the Physical Sciences), John Wiley&Sons, Chichester, England, 1999 (Manchester physics series) G. Covan, Statistical Data Analysis, Clarendon Press, Oxford, 1998 (Oxford Physics series)

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB/1-OZE-201/22	Course title: Fundamentals of Environmental Physics
Educational activities: Type of activities: lecture Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 6.	
Educational level: I.	
Prerequisites:	
Course requirements: Exam: written and oral exam, successful completion of the written part is condition of the oral part. Share in the overall rating: 80/20. Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 0/100	
Learning outcomes: Students will gain basic information from environmental physics and their connection with knowledge from other physics	
Class syllabus: Mathematical foundations of environmental physics (Basics of statistical molecular physics and thermodynamics of ideal and real gas equations, Maxwell-Boltzman distribution and its consequences, heat, entropy). Thermal energy (Conversion of heat into work. Heat engines, maximum efficiency of heat engines, examples of heat engines – Carnot cycle, Otto cycle, Diesel engine, Stirling engine). Fission energy (Basic characteristics of nuclear reactions, reaction energy. Fission chain reaction of its phase and characteristics. Multiplication coefficient. Fission products. Reactor equation). Solar energy (Stefan-Boltzmann's law, Planck's law. Earth-Sun energy balance without the influence of greenhouse gases. Greenhouse model of energy balance). Wind energy (Fluid flow, maximum efficiency of wind turbines – Betz limit, energy transfer through fluids). Atmosphere and water on Earth, - Annual water balance on Earth, Latent heat, Temperature gradient, Temperature potential. Liquids - water potential, Gravitational potential, Osmotic potential, Liquid-air interconnection, Isotope representation in nature, - Isotopes in molecules, Natural occurrence of radioactive isotopes - origin of radionuclides, Stable isotopes - Fractional isotope representation, Isotope fractionation, Processes leading to fractionation, Kinetic fractionation, Fraction temperature dependence, Fractionation rules, Isotopes as tracers - Tracer requirements, Types of tracers, Continental and altitude effect, Stable isotopes as paleotemperature archives with paleo precipitation. Dating using radioactive isotopes, ^{14}C , ^3H , Tritium in oceanography ... Earth in the solar system, characteristics of the Sun, - Orbital variations of solar radiation, Attenuation of solar radiation in the atmosphere, Properties of real radiating objects, Natural greenhouse effect, Vertical structure, Radiation balance of the Earth - atmosphere system.

Course requirements: Preliminary evaluation: independent work Final exam: oral / written Indicative evaluation scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 0/100	
Learning outcomes: After completing the course, students will gain basic information from meteorology and climatology.	
Class syllabus: The students gain knowledge of solar radiation, its transformation in the atmosphere, the composition of the atmosphere and its vertical structure, the total net radiation balance of the Earth-atmosphere system. Humidity characteristics, phase transitions, water vapor, water, ice and subcooled water. Vertical stability in the atmosphere, dry and saturated adiabatic gradient, standard atmosphere model. Basic features of general circulation, pressure formations and their genesis, forces acting in these formations. Frontal line, weather conditions on atmospheric fronts. Daily and annual course of meteorological elements. Local circulation systems. Climato-geographic factors, climate classification...	
Recommended literature: Meteorológia a klimatológia / S.P. Chromov (preložil J.Tomlajn)/ Vydavateľstvo SAV Bratislava, 1968, 456 strán Atmospheric Science / John M. Wallace, Peter V. Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 26 / 26 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: The assessment consists of two tests, two seminar works and a final exam. Indicative rating scale: A 95%, B 90%, C 80%, D 70%, E 60%. Credits will not be awarded to a student who obtains a grade of less than 60%. Scale of assessment (preliminary/final): 60/40	
Learning outcomes: Students will develop skills in using facts, concepts and terminology from the areas listed in the brief course syllabus. They will develop skills to communicate physics information (graph, table, relationship, text) as well as to formulate questions worthy of research and hypotheses of experiments.	
Class syllabus: Deepening and expanding knowledge of high school curricula in the areas of: ideal gas, temperature, kinetic theory of gases; heat conduction, flow and radiation; absolute black body radiation; direct current; energy conservation law and photoelectric effect; energy conservation law and Bernoulli's equation; X-ray absorption and attenuation of light in an optical fiber; periodic phenomena and sound.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAMŠ/1-DAV-201/20	Course title: Fundamentals of Probability and Statistics
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 3 / 2 per level/semester: 39 / 26 Form of the course: on-site learning	
Number of credits: 6	
Recommended semester: 5.	
Educational level: I., II.	
Prerequisites:	
Antirequisites: FMFI.KAMŠ/2-INF-175/18	
Course requirements: Teaching period: written exams Examination period: combined written and oral exam Examination period weight: 70% Evaluation (in %): A (100-91), B (90-81), C (80-71), D (70-61), E (60-51), Fx (50-0) Scale of assessment (preliminary/final): 30/70	
Learning outcomes: After finishing the course the students understand the mathematical foundations of probability and statistics. They can solve the most common types of probabilistic problems and execute the simplest statistical analyses.	
Class syllabus: Random events and probability, Independence of events, Conditional probability, General random variables, Distribution function, Discrete random variables and their basic types, Continuous random variables and their basic types, Numerical characteristics of random variables (for instance the mean value and the variance), Random vectors, Correlation and dependence of random variables, Law of large numbers, Central limit theorem, Introduction to the random variates generation, Introduction to the probabilistic information theory, Statistical inference for the simple random sample, Statistical inference for a pair of random samples, Statistical inference for the regression line, The fundamental principle of Monte-Carlo methods.	
Recommended literature: Probability and random processes / Geoffrey R. Grimmett, David R. Stirzaker. Oxford : Oxford University Press, 2001 Electronic materials of the lecturer

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KEF/1-FYZ-212/15	Course title: Fundamentals of Programming
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 26 / 26 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 5.	
Educational level: I.	
Prerequisites:	
Course requirements: Exam: practical (programming) Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 0/100	
Learning outcomes: The student will understand the principles of computer processing of numbers and the resulting limitations (data types, including links, number fields). They will understand the basic structures of the program (functions, branches, ...) and their use to algorithmize problem solving. They will be able to program in C / C ++ language simpler algorithms for solving mathematical and physical problems (eg movement in fields, calculation of fields, sums of rows, ...).	
Class syllabus: Basic structure of C / C ++ program, data types and their accuracy, program branching (if..else, switch, for, while, do..while), functions, use of references to return multiple values of functions, two- and multidimensional fields, texts , field references, data flows and their control (cin, cout), working with files (fstream), concept of object, drawing simple graphs from C ++ program (xmgrace, GNUplot), Euler's method for solving differential equations and its use for solving motion problems , roots of functions, numerical integration and its use for solving physical problems, random numbers and Monte Carlo methods, basics of object-oriented programming.	
Recommended literature: Kundracik, F .: Basics of Programming Practically. Vydavateľstvo UK 2013. On-line: http://www.fmph.uniba.sk/index.php?id=3246 Materials on the course page: http://davinci.fmph.uniba.sk/~kundracik1/ZakladyProgramovania/

Educational level: I.					
Prerequisites:					
Course requirements: Continuous assessment: homework, tests Exam: solving computer tasks It is necessary to obtain at least 90% of points to obtain A rating, at least 80% of points to grade B, at least 70% of points to grade C, at least 60% of points to grade D and at least 50% to grade E. Scale of assessment (preliminary/final): 70/30					
Learning outcomes: After completing the course, students will be able to write short, simple programs in Python and master the basic methods of debugging in their own programs.					
Class syllabus: Basic Python program structures: cycles, conditions, variables, functions, strings, files. Basic methods of finding errors in programs.					
Recommended literature: Python programming : An introduction to computer science / John M. Zelle. Sherwood, Or. : Franklin, Beedle & Associates, 2010					
Languages necessary to complete the course: Slovak, English

Academic year: 2022/2023					
University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KAI+KDMFI/1-KXX-018/20		Course title: Fundamentals of Programming (2)			
Educational activities: Type of activities: course Number of hours: per week: 4 per level/semester: 52 Form of the course: on-site learning					
Number of credits: 6					
Recommended semester: 2.					
Educational level: I.					
Prerequisites:					
Course requirements: Continuous assessment: homework, written tests Exam: solving computer tasks It is necessary to obtain at least 90% of points to obtain A rating, at least 80% of points to grade B, at least 70% of points to grade C, at least 60% of points to grade D and at least 50% to grade E. Scale of assessment (preliminary/final): 70/30					
Learning outcomes: Students will get acquainted with the basic structures for storing data in Python. Through motivational examples, they will improve in writing and debugging simple programs and get acquainted with the basic principles of computer science.					
Class syllabus: Advanced structures in Python (lists, n-tuples, matrices). Debugging programs. Motivational examples illustrating basic concepts of informatics. Examples of practical applications.					
Recommended literature: Python 3 : Výukový kurz / Mark Summerfield ; překlad Lukáš Krejčí. Brno : Computer Press, 2010 Sedem divov informatiky / Juraj Hromkovič ; preklad Michal Winczer. Ružomberok : Verbum, 2012

Academic year: 2022/2023					
University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KAFZM/1-OZE-142/22		Course title: Fundamentals of the Environment			
Educational activities: Type of activities: lecture Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning					
Number of credits: 3					
Recommended semester: 3.					
Educational level: I.					
Prerequisites:					
Course requirements: Preliminary evaluation: - Final exam: oral / written Indicative evaluation scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 0/100					
Learning outcomes: By completing the course, the student will gain basic knowledge about the physics of the environment, specifically about the basic principles that create the current environment.					
Class syllabus: Origin and evolution of the universe. Origin and evolution of the solar system and the Earth. Origin and evolution of the earth's surface (continental drift and other processes causing a formation of the current earth's surface). Physical fields acting on the Earth. Origin and evolution of the atmosphere. Origin and evolution of the hydrosphere. Origin of life on Earth. Global environmental issues: ozone hole, global warming, acid rain. Environmental cycles: nitrogen oxides and nitrogen cycle; sulphur oxides and the sulphur cycle; carbon oxides and the carbon cycle.					
Recommended literature: M. Hvožd'ara: Naša Zem: Pevná i premenlivá, Veda (2012); P. Smithson et al.: Fundamentals of the Physical Environment, Routledge (2008); R. A. Bailey et al.: Chemistry of the Environment, Academic Press (2002).

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAFZM/1-OZE-374/15	Course title: Geographical Information Systems
Educational activities: Type of activities: lecture Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 8.	
Educational level: I.	
Prerequisites:	
Recommended prerequisites: -	
Course requirements: Indicative evaluation scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 50/50	
Learning outcomes: Students will gain basic knowledge about working with geographical information systems and the possibilities of their use in the field of renewable energy sources, environmental physics, meteorology, hydrology and climatology.	
Class syllabus: Introduction to geographical information systems (GIS). Familiarity with GIS tools: location and attribute queries, map algebra, distance analysis, terrain model analysis, process modeling. Some examples of the use of GIS resources in the study and modeling of selected processes in the field of renewable energy sources, environmental physics, meteorology, hydrology and climatology. Digital terrain model, the dependence of the intensity of direct sunlight on the slope and orientation of the slopes. Use of linear regression in creating map layers.	
Recommended literature: The latest literature, sources from professional and scientific journals and information published on the Internet as recommended by the lecturer at the beginning of the semester Older literature: Tuček, J., 1998: Geografické informační systémy. Principy a praxe. Computer Press, Praha.	
Languages necessary to complete the course: Slovak in combination with English (some literature in English)

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAI/1-MXX-491/22	Course title: Inclusive Approaches to Education of Students with Special Educational Needs
Educational activities: Type of activities: seminar Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: Continuous assessment: active participation in class (elaboration of assigned tasks, participation in discussions) An exam: - Indicative assessment level: e.g. A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0	
Learning outcomes: The student: - They will get acquainted with the basic characteristics of types of health disadvantage (HR) and will know the consequences of HR on education. - Gain personal experience from meetings with people with disabilities and will be able to explain and apply the rules of communication with them. - Can characterize the forms of education of students with SEN and assess the possibilities of their pedagogical, technical and human support, which positively affect the success of education.	
Class syllabus: - Characteristics of basic concepts. - Disability models. - Disability legislation. - Human, communication, information and architectural barriers. - Impact of disability on education. - Segregation - integration - inclusion. - Information access technologies for people with disabilities. - Possibilities and limits of creating equal conditions for the education of pupils with specific educational needs. - Inclusive school - education for all. - The importance of education for the social inclusion of people with disabilities.	
Recommended literature:

Academic year: 2022/2023					
University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KJFB/1-OZE-153/22		Course title: Inorganic chemistry			
Educational activities: Type of activities: lecture Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning					
Number of credits: 3					
Recommended semester: 3.					
Educational level: I.					
Prerequisites:					
Course requirements: Final assessment: written examination Grading (%): A (100-91), B (90-81), C (80-71), D (70-61), E (60-51), FX (50-0) Scale of assessment (preliminary/final): 0/100					
Learning outcomes: Students will gain a basic overview of inorganic chemistry, which will include knowledge of atoms, molecules and ions, chemical reactions and their kinetics and acid-base equilibria of various solutions.					
Class syllabus: Change as the basic subject of chemistry. Matter, its states and physico-chemical properties. Structure of atoms and molecules. Periodic law. Chemical formulae and nomenclature. Atomic and molecular mass. Mass spectrometer. Chemical reactions and chemical equations. Properties of solutions. Acid-base and redox reactions and titrations. Energy of chemical reactions. Standard enthalpy of formation. Physical properties of solutions. Chemical kinetics and catalysis. Equilibrium of chemical reactions. Acids and bases. Acid-basic equilibrium and solubility. Laws of thermodynamics.

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KEF/1-FYZ-452/22	Course title: Introduction to Solid State Physics
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 4 / 2 per level/semester: 52 / 26 Form of the course: on-site learning	
Number of credits: 7	
Recommended semester: 8.	
Educational level: I., II.	
Prerequisites:	
Antirequisites: FMFI.KEF/1-FYZ-452/18	
Course requirements: Continuous assessment: homework, 2 papers Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): Weight of the intermediate / final evaluation: 100/0	
Learning outcomes: After completing the course, students will be actively acquainted with the following basic concepts of solid state physics: ideal crystal, reciprocal space, phonon spectrum, electron band structure and Fermi surface. They will also know how these concepts enter into the simplest analyzes of the thermal, electrical and optical properties of solids.	
Class syllabus: Symmetry classification of substances. Van der Waals-London bond. Liquid-gas transition. Crystals with van der Waals and ionic bonding. Basics of crystallography. Surface tension and nucleation. Diffraction experiments and reciprocal space. Classical and quantum lattice oscillations theory. Metal binding. Chemical bonding. Electron spectrum in an ideal crystal: tight bond method, Bloch's theorem, difference between metals and insulators. Transport phenomena: phenomenological description, Boltzmann's equation. Semiconductors and semiconductor electronics. Response to time-varying fields. Elementary models of dielectric function.

Course ID: FMFI.KDMFI/1-AIN-112/22	Course title: Introduction to Web Technologies
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 26 / 26 Form of the course: on-site learning	
Number of credits: 6	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Antirequisites: FMFI.KZVI/1-AIN-610/00	
Course requirements: Intermediate assessment: practical assignments Exam: practical (at least 70% of the semester points are needed) Indicative evaluation scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 20/80	
Learning outcomes: After completing the course, students will be able to create a correct web page (in HTML) with the correct structure and correctly formatted content. The design will be implemented using CSS and will be adapted to different devices (using MediaQueries or CSS framework). The pages will fulfil the basic conditions of accessibility for people with special needs. Students will be introduced to the basics of JavaScript, which will allow them to work with HTML elements, edit CSS and work with forms.	
Class syllabus: - HTML: document structuring, content formatting elements, basic page elements including multimedia objects, code validation, tables, forms and their appropriate structuring. - Cascading Style Sheets (CSS): properties and their values, selectors, pseudo-classes, properties for formatting fonts and text, tables and other objects, colors, backgrounds, lengths, units, box model, object placement, visual document formatting, styles for different devices, Media Queries, other CSS options with respect to current versions. - Introduction to CSS frameworks, e.g. Bootstrap + responsive pages. - Basic information on website accessibility.	
Recommended literature: actual documentation for each technology w3schools.com own electronic texts published on the website or in the Moodle environment

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KDMFI/1-KXX-003/20	Course title: Laboratory Practicals in Physics (1)
Educational activities: Type of activities: practicals Number of hours: per week: 3 per level/semester: 39 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 1.	
Educational level: I.	
Prerequisites:	
Course requirements: A: at least 90%, B at least 80%, C at least 70%, D at least 60%, E at least 50%. Scale of assessment (preliminary/final): 100/0	
Learning outcomes: Students will develop skills to empirically examine physical phenomena at the level corresponding to the target requirements for the high-school final examination in physics in the areas listed in the brief syllabus.	
Class syllabus: Measurement of physical quantities (length, mass, volume, time, temperature, force, gas pressure, electric current, electric voltage, magnetic induction, lighting, sound frequency) Physical dependence (independent and dependent variable, experiment constants), dependence graph, dependence table, mathematical description of dependence. Direct ratio and linear dependence. Linearization of nonlinear dependence by substitution and logarithmization. Random and systematic error of a series of measurements. Complete laboratory work - problem identification, formulation of hypotheses, selection of variables, design of apparatus, data collection and processing, formulation of conclusions, evaluation. Real group computer-aided laboratory experiments focused on the following areas: Hydrostatic compressive force in a liquid, Archimedes' law, Bernoulli's equation for a liquid, resistive force when moving a solid in a liquid, moving a conductor in a magnetic field, moving a magnet in a coil, sound generation, speed of sound propagation, standing waves on a stretched string and on an air column, sound interference).

Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KDMFI/1-KXX-013/20	Course title: Laboratory Practicals in Physics (2)
Educational activities: Type of activities: practicals Number of hours: per week: 3 per level/semester: 39 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 2.	
Educational level: I.	
Prerequisites:	
Course requirements: A: 90%, B:80%, C:70%, D:60%, E:50% Scale of assessment (preliminary/final): 100/0	
Learning outcomes: Students will develop skills to empirically examine physical phenomena at the level corresponding to the target requirements for the high-school final examination in physics in the areas listed in the brief syllabus.	
Class syllabus: Mathematical modeling of real physical situations. Comparison of data obtained by a mathematical model with data from a real experiment. Video measurement. Mathematical model and output in the form of interactive animation. Real group computer-aided laboratory experiments focused on the following areas: Newton's laws of motion, forces acting on circular motion, inertia, energy of a rotating body, ideal gas phenomena, heat capacity, radiation energy transfer, beam optics, dispersion, interference and diffraction of light, black body radiation.	
Recommended literature: Počítačom podporované prírodovedné laboratórium / Peter Demkanin a kol.. Bratislava : Knižničné a edičné centrum, 2006 Physics : Principles with applications / Douglas C. Giancoli. Harlow : Pearson Education, 2016 Fyzika 1 / David Halliday, Robert Resnick, Jearl Walker ; redakce českého vydání Petr Dub ; přeložili Miroslav Černý ... [et al.]. Brno : VUTUM, 2013 Fyzika 2 / David Halliday, Robert Resnick, Jearl Walker ; redakce českého vydání Petr Dub ; přeložili Miroslav Černý ... [et al.]. Brno : VUTUM, 2013

COURSE DESCRIPTION

Academic year: 2022/2023					
University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KAI/1-AIN-406/22		Course title: Language and Cognition			
Educational activities: Type of activities: course Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning					
Number of credits: 3					
Recommended semester: 2., 4., 6.					
Educational level: I.					
Prerequisites:					
Course requirements: Continuous assessment: presentations, bonus assignments Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0					
Learning outcomes: Acquisition of the most important current theories and methods of studying natural language and cognitive processes.					
Class syllabus: The course focuses on the most important aspects of natural language research (the most complex cognitive function): basic properties of language (arbitrariness, generative productivity, dynamism, structuring at many levels), mechanisms of speech production and perception, language acquisition, innate and acquired factors of language development.					
Recommended literature: G. Dorren: Babel. Around the World in 20 Languages. Profile Books, 2019 S. Pinker: Language Instinct. †Brilliance Audio, 2014 S. Pinker: The Stuff of Thought. Language as a Window Into Human Nature. Penguin Books 2008 S. Pinker: Words and Rules. The Ingredients of Language. Basic Books 2015

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAI/1-AIN-500/22	Course title: Linux for Users
Educational activities: Type of activities: course Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Type, volume, methods and workload of the student - additional information talk, 1h/week, online synchronous training, 2h/week, online synchronous	
Number of credits: 2	
Recommended semester: 2.	
Educational level: I.	
Prerequisites:	
Course requirements: Priebežné hodnotenie: practical computer exercises Skúška: practical computer exam Orientačná stupnica hodnotenia: A 92%, B 84%, C 76%, D 68%, E 60%	
Learning outcomes: Graduate: - knows the principle and function of the command line - knows the principles of operation of the GNU/Linux operating system - knows and understands the basic components of the GNU/Linux OS such as process, file system, user administration, access rights, ... - recognizes and applies a set of commands according to scenarios - creates a "oneline compound command" or a simple script to solve task assignment	
Class syllabus: - History and philosophy of GNU / Linux. Text console. File system navigation. (pwd, ls, cd, less, cat, man, w, exit, ssh, mosh, ...) - Directories and files (mkdir, rmdir, rm, cp, mv, ...) - Users, groups, redirects and search. Regular expressions. (id, su, passwd, grep, ...) - File and directory attributes (chown, chgrp, chmod, ...) - Text editor vim - File content sorting and selection commands (sort, head, tail, nl, uniq, tac, shuf) - File system searching (find) - Processes (ps, top, kill) - sed - stream editor - Processing by awk - Basics of bash scripts	

Recommended literature:					
Languages necessary to complete the course:					
Notes: The tasks are solved in a specialized software tool, which also enables effective distance synchronous education.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB+KTF/1-FYZ-116/22	Course title: Mathematical Methods in Physics (1)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 4 / 2 per level/semester: 52 / 26 Form of the course: on-site learning	
Number of credits: 7	
Recommended semester: 3.	
Educational level: I.	
Prerequisites:	
Antirequisites: FMFI.KJFB/1-FYZ-116/15	
Course requirements: For the semester, the student can get 30% (for tests) and the final written exam has a weight of 50%. The student must obtain at least half a point per semester in order to pass the final written exam. Indicative scale: A (100% -91%), B (90% -81%), C (80% -71%), D (70% -61%), E (60% -51%), Fx (50% -0%). Scale of assessment (preliminary/final): 30/70	
Learning outcomes: After completing the course, students will be able to use advanced mathematical methods necessary to master physics courses. In particular, methods of differential and integral calculus.	
Class syllabus: Scalars and vectors, operations of their use in physics. Linear algebra (solving equations with several variables, linear independence, determinants, matrices). Complex numbers and their use. Limits and derivatives (physical, geometric meaning, rules for calculation, use of derivatives in mathematics and physics - velocity, acceleration, differential, extrema). Integrals (methods of integration - modifications, per partes, substitution). Applications of integrals in physical practice, the principle of superposition (calculation of centers of gravity, moments of inertia, potentials of conservative fields, forces acting between bodies of different shapes). Numerical methods of derivation and integration. Council (Taylor and Mac Laurinov, Fourier work). Differential equations as a basic language of physics (separable DR, homogeneous DR, DR order reduction method, linear DR of the first and second degree, method of variation of constants, method of indeterminate coefficients, method of compiling DR and their use in physics). DR solutions that cannot be solved explicitly (qualitative method, development into a series, numerical method of LDR solution).	
Recommended literature: Matematika pre fyzikov / A. Grega, D. Kluvanec, E. Rajčan. Bratislava : Slovenské pedagogické nakladateľstvo, 1974 Matematický aparát fyziky / Jozef Kvasnica. Praha : Academia, 1997	

Matematické metody ve fyzice a technice / John Warren Dettman ; přeložil Jiří Langer ; vedec.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB+KTF/1-FYZ-117/22	Course title: Mathematical Methods in Physics (2)
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 4 / 2 per level/semester: 52 / 26 Form of the course: on-site learning	
Number of credits: 7	
Recommended semester: 4.	
Educational level: I.	
Prerequisites:	
Antirequisites: FMFI.KJFB/1-FYZ-117/15	
Course requirements: For the semester, the student can get 30% (for tests) and the final written exam has a weight of 50%. The student must obtain at least half a point per semester in order to pass the final written exam. Indicative scale: A (100% -91%), B (90% -81%), C (80% -71%), D (70% -61%), E (60% -51%), Fx (50% -0%). Scale of assessment (preliminary/final): 30/70	
Learning outcomes: After completing the course, students will be able to use advanced mathematical methods necessary to master physics courses. They will be skilled in the use of numerical methods and able to process the measured experimental data.	
Class syllabus: Multiple variable functions. Multidimensional integrals and their use in physics (integration over the "rectangle", integration over the set, substitution method - transformation of the integral into different coordinate systems, calculation of the moment of inertia, calculation of the position of the center of gravity). Vector scalar argument function. Coordinate systems (polar, cylindrical, spherical - volume and area elements, speed determination, accelerations in various bases). Tensors (motivation for the introduction of the tensor - the relationship between the momentum and angular velocity in rotational motion, the moment of inertia tensor and its components, the search for the main axes of the inertia tensor). Curve integrals and their use in physics (curve integrals of the 1st and 2nd kind - work, center of gravity, conservative and non-conservative fields - without criteria). Fundamentals of vector analysis (directional derivation, gradient of scalar function and its Einstein summation convention, Laplace operator in various coordinate systems, rotation and divergence of vector function - creation of "idea" based on analogy with hydrodynamics. Gauss-Ostrogradsky theorem, Stokes theorem and its application Field conservation criteria, area calculation). Fundamentals of statistics (Random variables - discrete and continuous, probability density, Gaussian distribution, calculation of means, standard deviation, applications in physics,	

data processing elements, arithmetic mean error, data fitting, minimization of the sum of squares). Partial DR and their use in physics (wave equation, methods of solving partial DR) Numerical methods for solving partial DR.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB/1-BMF-113/16	Course title: Mechanics
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 4 / 2 per level/semester: 52 / 26 Form of the course: on-site learning	
Number of credits: 7	
Recommended semester: 3.	
Educational level: I.	
Prerequisites:	
Course requirements: For the semester, the student can get 30% (for tests) and the final written exam has a weight of 50%. The student must obtain at least half a point per semester in order to pass the final written exam. Indicative scale: A (100% -91%), B (90% -81%), C (80% -71%), D (70% -61%), E (60% -51%), Fx (50% -0%). Weight of midterm / final assessment: Midterm assessment 30% / 70% final exam. Scale of assessment (preliminary/final): 30/70	
Learning outcomes: Upon completion of the course, students will become familiar with the basic concepts of mechanics such as mass, energy, momentum, angular momentum, moment of inertia, frequency; they will understand the meaning of equations of motion, they will know how to use conservation laws (momentum, mechanical energy, momentum), gain the ability to solve equations of motion for systems consisting of several points or bodies, they will understand the nature of rotational motions and harmonic motions.	
Class syllabus: Physical quantities and units. Movement in one dimension. Vectors. Movement in two and three dimensions. Laws of motion. Applications of Newton's laws of motion. Scalar product, work of constant and non-constant force. Conservative forces and their potential. Energy conservation law. Momentum of the system consisting of several mass points, center of gravity, the law of conservation of momentum. Rotational motion, angular velocity, angular acceleration. Angular momentum of the system consisting of several mass points, the law of its preservation. Inertia tensor. Newton's law for simple rotational motion. Equilibrium conditions. Harmonic oscillator. Damped harmonic oscillator, resonance. Statics and dynamics of fluids (Archimedes' law, Pascal's law, continuity equation, Bernoulli's equation).

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB+KAFZM/1- OZE-152/22	Course title: Molecular Physics
Educational activities: Type of activities: course Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 4.	
Educational level: I.	
Prerequisites:	
Course requirements: For the semester, the student can get 30% (for tests) and the final written exam has a weight of 50%. The student must obtain at least half a point per semester in order to pass the final written exam. Indicative scale: A (100% -91%), B (90% -81%), C (80% -71%), D (70% -61%), E (60% -51%), Fx (50% -0%). Scale of assessment (preliminary/final): 30/70	
Learning outcomes: Course graduates will gain basic knowledge of molecular physics, like knowledge of basic concepts of molecular mechanics and elements of thermodynamics, knowledge of applications of thermodynamics in an ideal classical gas, knowledge of basic applications of probability theory and mathematical statistics in physics.	
Class syllabus: Fundamentals of molecular-kinetic theory (statistical methods for description of systems). Thermodynamics (heat, work, entropy, thermodynamic theorems, state changes and processes in gases). Flow of gases and liquids (flow of diluted gases, laminar and turbulent flow, Bernoulli's equation). Transmission phenomena (heat conduction, convection, thermal conductivity of gases, internal friction of gases, diffusion). Liquids (surface phenomena, phenomena at the interface of the three states). Phase transitions. Real gases (attractive forces between real gas molecules, equations of state for gases, van-der-Waals equation, critical point, Joule-Thomson phenomenon).

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB+KAFZM/1-OZE-305/22	Course title: Nuclear and Fossil Energy and their Environmental Aspects
Educational activities: Type of activities: lecture Number of hours: per week: 3 per level/semester: 39 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 7.	
Educational level: I.	
Prerequisites:	
Course requirements: The course assessment consists of test (30%), and final oral and written exam (70%). Grading: A (100-91), B (90-81), C (80-71), D (70-61), E (60-51), Fx (50-0). Scale of assessment (preliminary/final): Practical work 30% (test) / 70% final exam. Scale of assessment (preliminary/final): 30/70	
Learning outcomes: By completing the course, the student will gain basic knowledge about non-renewable energy sources, specifically nuclear and fossil energy. In the first part of the course, students will gain a basic understanding of nuclear and neutron physics, fission physics and reactor physics. They will also gain knowledge about the operation of nuclear power plants and their impact on the environment as well as methods for monitoring radioactivity in the environment. In the second part of the lecture, the student will be acquainted with the basic use of fossil fuels (oil, natural gas, coal) in energy and transportation sectors, as well as with their impact on the environment.	
Class syllabus: Impact of the energy sector on the environment. Fundamentals of nuclear and neutron physics. Neutron distribution. Interaction of neutrons with atomic nuclei. Nuclear fission. Nuclear reactors. Principle of operation of a nuclear reactor. Multiplication factor. Nuclear power plant scheme. Nuclear fuel, moderator, coolant, core, primary and secondary circuits, heat dissipation, shielding, reactor types, prospects for the development of nuclear reactors and nuclear power. Safety of nuclear power plants and their impact on the environment. Sources of activity in nuclear reactors, barriers preventing radionuclide leakage, containment. Radioactive waste, its treatment and disposal. Fuel cycle, the impact of its stages on the environment. Human exposure pathways, radionuclides in the food chain, critical exposure pathways. Risk to the population in the vicinity of nuclear power plants. Accidents in the operation of nuclear power plants. Prospects for the development of nuclear reactors. Radionuclides in the environment. Monitoring of radioactivity in the natural environment. Current state and forecasts of energy production and consumption. Renewable vs. non-renewable energy sources, energy density of energy sources. Fundamentals of the combustion process. Fossil	

fuels (oil, natural gas, coal). Use of fossil fuels in energy (thermal power plant, steam-gas power plant, cogeneration, trigeneration). Use of fossil fuels in transportation (petrol, diesel, compressed natural gas, liquefied petroleum gas). Environmental aspects of fossil energy. By-products of combustion processes (exhaust gases, greenhouse gases).

Educational activities: Type of activities: practicals Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning					
Number of credits: 0					
Recommended semester: 1.					
Educational level: I.					
Prerequisites:					
Course requirements: Grades: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0					
Learning outcomes: Orientation in the history of the selected sports discipline, mastering the basic principles of compensation of mostly mental burdens of the individual. Creating a positive, lasting relationship to physical education and sports in the sense of calocagation. Mastering the demands for the development of motor abilities, skills, proper technique of performing individual movements in individual sports, individual game activities in collective sports games.					
Class syllabus: Introduction to the basic history of the selected sport, with the basic principles of compensation of one-sided psychological burden of the individual's body. Development of basic motor skills with a stop to all kinds of endurance, coordination, increasing the level of joint mobility. Training of individual game activities in collective sports games. In individual sports disciplines, practice of basic techniques of individual elements.

Prerequisites:					
Course requirements: Grades: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0					
Learning outcomes: Addressing a positive and lasting relationship with physical education and sport by understanding the importance of physical development and maintaining its optimal level throughout life. The use of strength and other motor skills to more rationally manage the game activities of the individual, while improving the acquisition of more complex elements of technology. In everyday life in providing basic necessities.					
Class syllabus: Completing a positive lasting relationship to physical education and sport. Development of motor skills with a focus on the development of strength, with an emphasis on dynamic strength and endurance in strength. In collective sports games, improving individual game activities, practicing basic game combinations, playing with modified rules, tasked games. In individual sports disciplines, the development of motor abilities and skills necessary for the acquisition of more complex elements of lower difficulty techniques.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB/1-OZE-372/10	Course title: Practical Training in Radiometry and Spectrometry
Educational activities: Type of activities: laboratory practicals Number of hours: per week: 3 per level/semester: 39 Form of the course: on-site learning	
Number of credits: 4	
Recommended semester: 8.	
Educational level: I.	
Prerequisites:	
Course requirements: Preliminary evaluation: elaboration of laboratory protocols. Final evaluation: presentation of the results. Indicative evaluation scale: A 90%, B 80%, C 70%, D 60%, E 50%. Scale of assessment (preliminary/final): 80/20	
Learning outcomes: Upon completion of the course, students will gain practical experience in the use of spectrometric and radiometric methods.	
Class syllabus: Study of the basic characteristics of the semiconductor spectrometer. Study of the analysis of a complex gamma spectra. Investigation of the properties of a large area gas counter. Determination of the integral alpha and beta activity of solid samples. Measurement of radon activity concentration by scintillation chamber. Determination of detection efficiency in quenched samples in liquid scintillation technique. Analysis of air samples by semiconductor alpha spectrometer. Determination of radionuclide activity based on dose rate.	
Recommended literature: Gamma and X-Ray spectrometry with semiconductor detectors / Klaus Debertin, Richard G. Helmer. Amsterdam : Elsevier, 1988 Státní úřad pro jadernou bezpečnost: Stanovení radonového indexu pozemku přímým měřením, SÚJB, 2012	
Languages necessary to complete the course: Slovak, English

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB/1-FYZ-322/22	Course title: Practical in atomic and nuclear physics
Educational activities: Type of activities: laboratory practicals / independent work Number of hours: per week: 2 / 1 per level/semester: 26 / 13 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 8.	
Educational level: I.	
Prerequisites:	
Recommended prerequisites: 1-FYZ-231/22 Introduction to Modern Physics (Physics 2/S)	
Course requirements: Interim evaluation: elaboration of exercise protocols Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0	
Learning outcomes: Gain experimental skills with used instrumentation, registration of ionizing radiation and processing of measured data. In the realized experiments, make sure of the agreement of experiments and theories that clarify them.	
Class syllabus: In the introductory exercise, students will get acquainted with the methods used to process electrical pulses from ionizing radiation detectors (differential discriminator, single-channel and multi-channel analyzer). Separate laboratory exercises follow - from atomic physics: Franck-Hertz experiment (verification of Bohr's postulates), Stefan-Boltzmann's law (radiation of an absolutely black body), range of alpha particles in air (principles of semiconductor detectors) - from nuclear physics: statistical nature of nuclear transformations, determination of gamma radiation energy (principles of scintillation detectors), verification of Compton scattering - from applied nuclear physics: measurement of air radioactivity (principles of Geiger-Müller detectors).	
Recommended literature: - instructions for exercises at http://www.dnp.fmph.uniba.sk/~kollar/navodnik.htm - Physics practicum IV: Atomic physics and ionizing radiation detection / Matej Florek ... [et al.]. Bratislava: Comenius University, 1988	
Languages necessary to complete the course: Slovak, English.	

Notes:

Recommended range of instruction (in hours): 39

Weekly: 2P + 1H Period of study: 27 P (9 weeks x3h) +12 H (4 weeks x3h)

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KEF/1-FYZ-222/22	Course title: Practical in electricity and magnetism
Educational activities: Type of activities: laboratory practicals / independent work Number of hours: per week: 2 / 1 per level/semester: 26 / 13 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 6.	
Educational level: I.	
Prerequisites:	
Course requirements: Interim evaluation: elaboration of practical papers, Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0	
Learning outcomes: Acquisition of skills in registration and data processing by computer, measurement of electrical and magnetic quantities. Physical interpretation and written / graphic presentation of processed results.	
Class syllabus: In the initial two or three exercises, joint acquisition of skills and measurement with analog and digital devices (oscilloscope, digital multimeter, A / D converter), processing of measured data by computer. This is followed by five to six separate laboratory works on electricity and magnetism selected from the offer: electrical properties of substances - electric bridges, Hall effect; electric field mapping; magnetic field mapping - air coils; electromagnetic induction - transformer; electrical RLC oscillations - transient RLC phenomenon, serial and parallel RLC circuit; magnetic properties of substances - hysteresis loops, permeability of substances, separation of magnetic losses; fuel cell; determination of the specific charge of an electron (e / m_0).	
Recommended literature: - e-learning systém k predmetu s aktualizovanými podkladmi k experimentom - Fyzikálne praktikum II : Návodý na praktické cvičenia z elektriny a magnetizmu / Ján Pavlík. Bratislava : Univerzita Komenského, 2002 - Elektromagnetizmus, Andrej Tirpák, Bratislava: Polygrafia SAV, 1999	
Languages necessary to complete the course: Slovak, English (designations of instrument controls and their manuals)	
Notes: Recommended range of instruction (in hours): 39 Weekly: 2P + 1H Period of study: 27 P (9 weeks x3h) +12 H (4 weeks x3h)

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KEF/1-FYZ-221/22	Course title: Practical in mechanics and molecular physics
Educational activities: Type of activities: laboratory practicals / independent work Number of hours: per week: 2 / 1 per level/semester: 26 / 13 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 5.	
Educational level: I.	
Prerequisites:	
Course requirements: Continuous assessment: control of preparation for the internship, elaboration of reports from internships Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): Weight of the intermediate / final evaluation: 100/0	
Learning outcomes: Deepening and use of theoretical knowledge of mechanics and molecular physics, mastering basic physical measurement methods. The student will master the basic habits of independent scientific work in physical research: working with literature, keeping laboratory protocol, obtaining experimental erudition, critical evaluation of measurement and physical interpretation of processed results, written processing of individual physical problems in the form of a paper.	
Class syllabus: In practice, students will gain skills in experimental verification of some basic physical laws (gravitational, Hook's, equation of state, etc.), quantitative investigation of physical events (state changes, oscillations, polytropic action, etc.) and measurement of some basic physical quantities (modules elasticity, density, viscosity, speed of sound, air humidity, surface tension, gravitational constant, gravitational acceleration,...). Tasks: Density measurement. Measurement of modulus of elasticity. Vibrations of coupled pendulums. Measurement of gravity acceleration. Moment of inertia measurement. Gravitational constant measurement. Heat capacity measurement. Group heat measurement. Determination of dynamic viscosity of fluids. Measurement of dynamic viscosity of liquids by commercial viscometers. The fall of a sphere in a confined gaseous environment. Polytropic story. Determination of surface tension of liquids. Measurement of relative and absolute humidity. Measuring the speed of sound in air. Basic properties of oscillating motion. Some tasks are equipped with sensors and transducers that allow the registration and processing of measured data by computers. For some tasks, conventional measuring instruments and aids are used.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KEF/1-FYZ-321/22	Course title: Practical in optics
Educational activities: Type of activities: laboratory practicals / independent work Number of hours: per week: 2 / 1 per level/semester: 26 / 13 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 7.	
Educational level: I.	
Prerequisites:	
Recommended prerequisites: 1-FYZ-218/22 Optics (Physics 2/S), or 1-UFY-210/00 Waves and Optics (Physics Teacher Training in combination 2/S), or 1-TEF-205 Optics (Technical Physics 2/S) or 1-FYZ-211/17 Electromagnetism and Optics (Physics 2/W)	
Course requirements: Interim evaluation: elaboration of practical papers Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 100/0	
Learning outcomes: Physical interpretation and written / graphic presentation of processed results.	
Class syllabus: Through a series of measurements, we get acquainted with basic concepts and phenomena such as: light sources - radiation - reflectivity - absorption - photometry - basic photometric quantities. Next, we examine phenomena such as - light interference (two-beam interference, multi-beam interference), diffraction, light dispersion, refractive index, light polarization, optical activity. From the lecture we will repeat the basics of optical imaging - geometric optics and explain the construction of selected optical instruments, such as: photometer, microscope, telescope, monochromator, spectrometer, refractometer, interferometer, etc.) Some will be constructed and their parameters verified. We will measure some basic physical constants. Each mathematical formulation of the investigated physical dependence (phenomenon) can be transformed into a certain measurable dependence (dependent on the so-called parameters). These are usually of various importance in terms of the phenomenon under study. In addition to storing the measured data, it is appropriate to display the measured data continuously graphically, which allows, especially when compared with the expected functional dependence, better visual inspection and more prompt detection and possible elimination of found errors. There is a computer for each task. It includes instructions for the task, a program for evaluating measurements and graphical display of measured data and a program for a virtual experiment in	

the case of distance learning or. the need to carry out a parallel experiment to better understand the phenomenon. The measured tasks and their selection can be adapted to the respective field of study.					
Recommended literature: - Web = instructions for the subject with updated data for experiments - Pavel Vojtek: Practical exercises in optics, MFF UK, 1992, scripts - Štrba A., Mesároš V., Senderáková D. : Optics with Examples, MFF UK, 1996, scripts					
Languages necessary to complete the course: Slovak, English (designations of instrument controls and their manuals)

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAFZM/1-OZE-304/22	Course title: Renewable Energy Sources
Educational activities: Type of activities: course Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 3	
Recommended semester: 8.	
Educational level: I.	
Prerequisites:	
Course requirements: Preliminary evaluation: - Final exam: oral / written Indicative evaluation scale: A 90%, B 80%, C 70%, D 60%, E 50% Scale of assessment (preliminary/final): 0/100	
Learning outcomes: By completing the course, the student will gain basic knowledge about renewable energy sources, their physical principles, exploitability, and current technologies.	
Class syllabus: Renewable energy sources, their position and importance in the energy mix of countries, their general advantages, disadvantages. Current state and forecasts of renewable energy production. Wind energy (principles, technologies, environmental impact). Hydropower (principles, technologies, environmental impact). Solar energy (principles of solar thermal energy as well as the production of electricity using photovoltaic cells, technology, environmental impact). Geothermal energy (principles, technology). Heat pumps. Energy of sea currents. Biomass energy. Fundamentals of hydrogen energy. Brief evaluation of the exploitability of individual renewable resources in real conditions. Carbon footprint of renewable energy sources.	
Recommended literature: M. Morvová: Princípy metód a využitie obnoviteľných zdrojov energie, Knižničné a edičné centrum FMFI UK (2008); D. J. C. COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KAI/2-IKVa-192/19	Course title: Science, Technology and Humanity: Opportunities and Risks
Educational activities: Type of activities: seminar Number of hours: per week: 3 per level/semester: 39 Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 2.	
Educational level: I., II.	
Prerequisites:	
Course requirements: Semestral evaluation: active participation Final evaluation: essay Weight of the final evaluation: 60% To achieve an A, 90% is needed, for B at least 80%, for C 70%, for D, 60% and for an E, at least 50% of overall assessment.	
Learning outcomes: The students will gain awareness of the contemporary and potential future challenges posed by scientific and technological innovations and their impact on human behaviour, culture and society.	
Class syllabus: Big data: privacy, politics and power, Internet of things, its usefulness and threats, Assistant AI and its place in future society, Job market and inequality, Enhancements and human rights and the right to change self and others, Initiatives for responsible research, Artificial minds, Hybridization between species and between AI and organic minds, Future of minds and trans-humanism, Artificial emotional intelligence, An after human era.	
Recommended literature: - S. Russell: Human compatible. Artificial intelligence and the problem of control. Viking, 2019. - J. Havens: Heartificial intelligence. COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB+KEF/1- OZE-920/10	Course title: Seminar in BSc Project
Educational activities: Type of activities: seminar Number of hours: per week: 2 per level/semester: 26 Form of the course: on-site learning	
Number of credits: 2	
Recommended semester: 8.	
Educational level: I.	
Prerequisites:	
Course requirements: For the semester, the student can get 50% for the preparation of the bachelor thesis project; the final presentation has a weight of 50%. A student must earn at least half of the points for the preparation of the bachelor thesis project in order to pass the final presentation. The student must also score at least 26 points on the final presentation. Grades: A (100-91), B (90-81), C (80-71), D (70-61), E (60-51), FX (50-0). Mid-term / final assessment weighting: 50% mid-term assessment (bachelor thesis project) / 50% final presentation. Scale of assessment (preliminary/final): 50/50	
Learning outcomes: Students will learn the methods of working on an expert project. They will also acquire the necessary knowledge to complete the bachelor thesis.	
Class syllabus: Methodological procedures for developing the structure and timetable for the solution of the assigned project, work with literature, methods of data acquisition. What is expected from the students: First public presentation on the assigned topic of the bachelor's thesis, clear formulation of the content and objectives of the thesis, ideas about the methods of solution, analysis of ambiguities. Joint analysis of speeches of individual students.	
Recommended literature: Provided by the bachelor thesis supervisor	
Languages necessary to complete the course: Slovak, English	
Notes:

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFLKTF/1-FYZ-251/15	Course title: Theoretical Mechanics
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 4 / 2 per level/semester: 52 / 26 Form of the course: on-site learning	
Number of credits: 7	
Recommended semester: 5.	
Educational level: I.	
Prerequisites:	
Course requirements: Scale of assessment (preliminary/final): 20/80	
Learning outcomes: After completing the course, students will understand and be able to use the material listed in the Brief syllabus of the course. In this way they will be well prepared for further theoretical physics courses.	
Class syllabus: Lagrangian and Hamiltonian formalism, the least action principle, scaling and similar solutions, two-body problem and Kepler's problem, small oscillations, perturbation theory, Euler's equations for solid body rotation, stress tensor and surface forces, ideal and viscous fluid equations, Hook's law, waves in an elastic continuum and in an ideal fluid.	
Recommended literature: Theoretical mechanics / Miroslav Brdička, Arnošt Hladík. Prague: Academia, 1987 Mechanics in Physics / Jan Horský, Jan Novotný, Milan Štefaník. Prague: Academia, 2001 Fecko, M. : Extended Syllabus and Problems in Theoretical Mechanics [40 pages, available electronically J.Langer, J.Podolský: Theoretical Mechanics, electronically at http://utf.mff.cuni.cz/vyuka/OFY003/ J.Tillich, L.Richterek: Classical Mechanics, electronically at http://muj.optol.cz/richterek/lib/exe/fetch.php?media=mechanika:mechanika.pdf

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Mathematics, Physics and Informatics	
Course ID: FMFI.KJFB/1-BMF-351/15	Course title: Thermodynamics and Statistical Physics
Educational activities: Type of activities: course Number of hours: per week: 5 per level/semester: 65 Form of the course: on-site learning	
Number of credits: 6	
Recommended semester: 8.	
Educational level: I.	
Prerequisites:	
Course requirements: Preliminary evaluation: individual work - project (30 %) Final exam: written and oral (70 %) Indicative evaluation scale: A (100 % -91 %), B (90 % -81 %), C (80 % -71 %), D (70 % -61 %), E (60 % -51 %), Fx (50 % -0 %). Scale of assessment (preliminary/final): 30/70 Scale of assessment (preliminary/final): 30/70	
Learning outcomes: After the course, students are able to use the principles and methods of thermodynamics and statistical physics in practice.	
Class syllabus: Mathematical introduction, probability and statistics. First law of thermodynamics. Second law of thermodynamics. Heat engines. Entropy from thermodynamics point of view. Ideal gas. Statistics of system of spins. Statistics of particles in a box. Thermal contact between physical systems. System in thermal contact with reservoir. Canonical distribution. Paramagnetism. Curie's law. Mean energy of an ideal gas of monoatomic molecules. Entropy change at low heat transfer, entropy measurement principle. Statistical physics of classical particles (concept of state and number of available states for the classical system, canonical distribution in the classical approximation, equipartition law, specific heat capacities). Thermal and diffusion contact between systems (thermal and diffusion equilibrium conditions, chemical potential, large canonical distribution). Quantum ideal gases (Fermi and Bose statistics. Quantum ideal gas in the classical limit. Boltzmann distribution. Barometric formula, chemical reactions, statistics of conductivity electrons in metal. Fermi energy of degenerate gas. Phase equilibrium and phase transitions. Transfer phenomena.

COURSE DESCRIPTION

Academic year: 2022/2023					
University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KEF/1-TEF-211/19		Course title: Thermophysics			
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 26 / 26 Form of the course: on-site learning					
Number of credits: 5					
Recommended semester: 6.					
Educational level: I.					
Prerequisites:					
Course requirements:					
Learning outcomes:					
Class syllabus: Thermal properties of materials: thermal conductivity, boundary conditions, mathematical description of heat transfer. Thermal conductivity of composites. Measurement of thermophysical parameters. Radiative heat transfer. thermoelectric phenomena.					
Recommended literature: Convective heat and mass transfer / W. M. Kays, M. E. Crawford. New York : McGraw-Hill, 1993 Radiative heat transfer / Michael F. Modest. New York : McGraw-Hill, 1993 Ozisik M.N.: Heat Transfer: A Basic Approach McGraw-Hill Book Comp. F. Incropera et al: Incropera's principles of Heat and Mass Transfer, J Willey 2017					
Languages necessary to complete the course: English

COURSE DESCRIPTION

Academic year: 2022/2023					
University: Comenius University Bratislava					
Faculty: Faculty of Mathematics, Physics and Informatics					
Course ID: FMFI.KEF/1-UFY-210/22		Course title: Waves and Optics			
Educational activities: Type of activities: lecture / course Number of hours: per week: 3 / 1 per level/semester: 39 / 13 Form of the course: on-site learning					
Number of credits: 5					
Recommended semester: 6.					
Educational level: I.					
Prerequisites:					
Course requirements: Continuous assessment: written tests (2x10 marks), lab reports (2x15 marks) Exam: written (30 marks), oral (20 marks) Indicative assessment scale: A 90%, B 80%, C 70%, D 60%, E 50% Credits will be awarded if the student obtains at least 50% marks.					
Learning outcomes: Graduates have a systematic knowledge of mechanical waves (including sound) and wave optics at the level of a core university physics course. They have an idea of the boundaries between graduation and university physics in the field of wave optics from the point of view of work with high school youth with an increased interest in physics.					
Class syllabus: Oscillations and oscillating systems (modes, resonators, oscillations and waves, Fourier analysis of oscillations). Waves (harmonic waves, complex notation, wave superposition, wave polarization, Doppler effect, wave diffraction, waves in physics, and waves at boundaries). Wave optics (light interference, light diffraction, holography, light dispersion in dielectrics, dispersion, polarization by reflection and refraction, spreading of light in anisotropic conditions). Geometrical optics and basics of optical projection. Photo metrics. Contemporary problems in optics.					
Recommended literature:					
Languages necessary to complete the course: Slovak ad English.					
Notes:
