TABLE OF CONTENTS

1. 2-UE-010/15 Applied Econometrics.....	2
2. UE-130/16/15 Diploma Seminar 1.....	4
3. UE-170/16/15 Diploma Seminar 2.....	5
4. FSEV/mgAE/SP3/15 Diploma Thesis and Defence (state exam).....	6
5. 2-UE-440/22 Econometric Modeling.....	7
6. 2-UE-400/22 Economic Models of Politics.....	9
7. 2-UE-SP4/22 Economic Theory (state exam).....	11
8. UE-120/16/15 Financial Investing.....	13
9. UE-390/21 Financial and capital markets.....	15
10. UE-090/16/15 Game Theory.....	17
11. UE-070/16/15 Macroeconomic Analysis.....	19
12. 2-UE-430/22 Macroeconomic Modeling.....	21
13. 2-UE-420/22 Master's Practice.....	23
14. UE-020/16/15 Microeconomic Analysis.....	24
15. UE-080/16/22 Modelling of Economic Processes.....	26
16. UE-060/16/15 Models of Banking Operations.....	28
17. UE-050/16/15 Models of General Economic Equilibrium.....	30
18. UE-410/21 Monetary Policy.....	32
19. UE-195-15/16/22 Multi-criteria Decision-making.....	34
20. UE-030/16/15 Optimal Programming.....	35
21. 2-UE-SP5/22 Quantitative Methods in Economics (state exam).....	37

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Social and Economic Sciences	
Course ID: FSEV.ÚE/2-UE-010/15	Course title: Applied Econometrics
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 28 / 28 Form of the course: combined	
Number of credits: 6	
Recommended semester: 1.	
Educational level: II.	
Prerequisites:	
Course requirements: Course requirements: A semestral project is worth of 30 % and the final exam is worth of 70% of the final grade. The evaluation scale is as follows: A 100 – 91; B 90 – 81; C 80 – 73; D 72 – 66; E 65 – 60; FX less than 60.	
Learning outcomes: Student extends her/his knowledge about modern econometric methods with a special focus on univariate, multivariate, linear and non-linear time series models.	
Class syllabus: 1. Nonlinear modes. 2. Models with qualitative dependent variables. 3. Models with discrete dependent variables. 4. System methods of simultaneous models parameters estimation. 5. Application of the simultaneous models: analysis of the structure, prognostic application, evaluation about the policy makers decisions. 6. Univariate ARMA time series models and their application 7. Conditional volatility GARCH models and their application 8. Multivariate time series models 9. Unit root tests, Causality, Co-integration 10 Forecasting and forecast evaluation	
Recommended literature: Hatrák (2007): Ekonometria. Wooldridge (2010): Econometric Analysis of Cross Section and Panel Data. Hill, Griffithss and Judge (2001): Undergraduate Econometrics. Verbeek (2017): A Guide to Modern Econometrics. Ruud (2000): Classical Econometric Theory.

STATE EXAM DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Social and Economic Sciences	
Course ID: FSEV.ÚE/FSEV/mgAE/ SP3/15	Course title: Diploma Thesis and Defence
Number of credits: 6	
Recommended semester: 3., 4..	
Educational level: II.	
Learning outcomes: After competing, students will be able to process the results of their own conceptual economic-mathematical analysis in a comprehensive and systematic written form, prepare a systematic electronic presentation (in power-point) and lead a qualified discussion about it.	
Class syllabus: The syllabus is given by the diploma supervisor at the beginning of the semester according to the specifications of the assignment.	
State exam syllabus:	
Recommended literature: Internal regulation no. 12/2013 Directive of the rector of the Comenius University in Bratislava, about the basic requirements of final theses, rigorous theses and habilitation theses, their originality controll, preservation and access at the Comenius University in Bratislava. STN ISO 690:2010(E) Information and documentation Guidelines for bibliographic references and citations to information resources. Economic and mathematical literature according to the recommendation of the supervisor of the thesis	
Languages necessary to complete the course: Slovak language and English language	
Last change: 09.10.2023	
Approved by:	

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Social and Economic Sciences	
Course ID: FSEV.ÚE/2-UE-440/22	Course title: Econometric Modeling
Educational activities: Type of activities: lecture + seminar / lecture Number of hours: per week: 2 / 2 per level/semester: 28 / 28 Form of the course: combined	
Number of credits: 6	
Recommended semester: 2.	
Educational level: II.	
Prerequisites: FSEV.ÚE/2-UE-010/15 - Applied Econometrics	
Course requirements: Analytical paper presented by the student is worth 50% of the final grade and the final exam is worth 50% of the final grade. grade A B C D E Fx points 91-100 81-90 73-80 66-72 60-65 <59	
Learning outcomes: After successful completion of the course, the participant will be able to apply resampling methods, nonparametric methods, and multivariate statistical methods when analyzing economic and financial data.	
Class syllabus: 1. Monte Carlo and bootstrap methods. 2. Nonparametric techniques. 3. Multivariate statistics. 4. Machine learning.	
Recommended literature: Rizzo (2019): Statistical Computing with R. Dikta and Scheer (2021): Bootstrap Methods: With Applications in R. Zwanzig and Mahjani (2020): Computer Intensive Methods in Statistics. Pena and Tsay (2021): Statistical Learning for Big Dependent Data. James, Witten, Hastie and Tibshirani (2017): An Introduction to Statistical Learning. Flury (1997): A First Course in Multivariate Statistics. Cho and Martinez (2018): Statistics in Matlab.	
Languages necessary to complete the course: Slovak language and English language	
Notes: Knowledge of the MATLAB programming language is required.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Social and Economic Sciences	
Course ID: FSEV.ÚE/2-ÚE-400/22	Course title: Economic Models of Politics
Educational activities: Type of activities: lecture / seminar Number of hours: per week: 2 / 2 per level/semester: 28 / 28 Form of the course: combined	
Number of credits: 6	
Recommended semester: 3.	
Educational level: II.	
Prerequisites:	
Course requirements: A term paper submitted by the student whose grade is 25% of the final grade, a midterm test which is 25% of the final grade, and a final exam which is 50% of the final grade. Rating: A: 91-100 points; B: 81-90 points; C: 73-80 points; D: 66-72 points; E: 60-65 points; Fx: 0-59 points	
Learning outcomes: Upon successful completion of the course, the student will understand the theoretical as well as empirical applications of political economy models. Students will develop an understanding of the many complex ways in which politics and economics interact and vice versa.	
Class syllabus: 1. Theoretical Foundations - Public Choice Theory, Social Welfare Function 2. Voting rules - Lindahl model 3. Voting rules - Majority voting, Median voter theory, Multidimensional models and preference distributions 4. Voting Rules - Logrolling, Arrow's Impossibility Theorem 5. Public Policy Design - Plurality and Proportional Voting 6. Public Policy Design - Models of Bureaucracy (Niskanen) 7. Public Policy Design - Interest Groups (Rent-seeking, Iron Triangle, Revolving Door, Lobbying) 8. Political-Economic Cycle (PEC) 9. Time inconsistency in macroeconomic policy (CI) 10. Applications of PEC and QI in monetary and fiscal policy 11. Immigration preferences 12. Policy making and intergenerational accounting 13. Current issues in economic policymaking

Notes:

Course evaluation

A total number of evaluated students: the real number of evaluated students from the course's introduction to its last update.

A B C D E FX

a b c d e f

The table includes the percentage of evaluated students who obtained an A, B, ... FX grade after enrolling in the course. The total sum of a, b, c, d, e, f is 100. If a student obtained FX in one year and after further enrollment in the course, evaluation D, both of his evaluations will be taken into account.

STATE EXAM DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Social and Economic Sciences	
Course ID: FSEV.ÚE/2-UE-SP4/22	Course title: Economic Theory
Number of credits: 9	
Educational level: II.	
Recommended prerequisites: Prerequisites: All compulsory, optional and selection courses according to the study plan.	
Course requirements: The grade is awarded by the state examination committee. Rating A B C D E FX points 91-100 81-90 73-80 66-72 60-65 <59	
Learning outcomes: Student is able to demonstrate mastery of the requirements of the two-years master's study in quantitative methods in economics. Student is able to integrate theoretical and practical knowledge and master the principles of construction and economic interpretation of theoretical models.	
Class syllabus: State exam syllabus: 1. Risk management in banking. 2. Monetary policy (operations on free market, mandatory minimum reserves, automatic operations, monetary policy of the European Central Bank and non-standard operations of the European Central Bank). 3. Pillars and principles of banking union functioning. 4. Interbank payment, settlement, and communication systems. Interbank operations and interest measure. 5. Transmission mechanism and its types. 6. Issue activity of banks. 7. Consumer theory - budget constraint, types of preferences, utility function, optimal strategy, revealed preferences, Slutsky equation. Decision making in time. 8. Theory of the firm – production function, profit maximization, cost minimization, aggregated supply. Equilibrium in perfect and imperfect markets. 9. Types of decision environments, conditional consumption, utility function and probability. Theory of expected utility. Risk and risk aversion, risk distribution and the role of the stock market. 10. Externalities, quasi-linear preferences, and the Coase theorem. Production externalities, social and private costs. Market signals and the tragedy of the commons. 11. Public assets, private securing of trust assets, parasitism, different levels of public goods, quasi-linear preferences, and public goods. Electoral systems and their evaluation. 12. Welfare, aggregation of preferences, social welfare function, welfare maximization and types of wealth allocation. 13. Solow's model of economic growth. 14. Basic Ramsey's dynamic macroeconomic model. 15. Diamond's model of overlapping generations. 16. Theory of endogenous growth (Romer's model).	

17. The theory of the real economic cycle and the basic canonically dynamic stochastic model general economic equilibrium (DSGE).

18. Modeling of consumption, investment and accumulation of capital and government interventions in dynamic stochastic models of general economic equilibrium (DSGE).

State exam syllabus:

University: Comenius University Bratislava					
Faculty: Faculty of Social and Economic Sciences					
Course ID: FSEV.ÚE/UE-120/16/15		Course title: Financial Investing			
Educational activities: Type of activities: lecture / seminar Number of hours: per week: 2 / 2 per level/semester: 28 / 28 Form of the course: combined					
Number of credits: 6					
Recommended semester: 2.					
Educational level: II.					
Prerequisites:					
Course requirements:					
Learning outcomes: To present modern knowledge of financial investing theory in a formal manner to create assumptions for model approaches applications in solving financial practice problems. The subject is oriented to explanations of financial decision making problems					
Class syllabus: 1. Principles of financial evaluations of investment. 2. Outranking of financial projects on the base of such characteristics as net present value, internal rate of return, profit index and others. 3. Methods for outranking of investment projects. 4. Portfolio choice and its analysis - Markowitz model. 5. Basic methods of investment and financial planning. 6. Software products with financial functions, optimization methods and outranking methods are being used in solving problems.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Social and Economic Sciences	
Course ID: FSEV.ÚE/UE-390/21	Course title: Financial and capital markets
Educational activities: Type of activities: lecture / seminar Number of hours: per week: 2 / 2 per level/semester: 28 / 28 Form of the course: combined	
Number of credits: 6	
Recommended semester: 3.	
Educational level: II.	
Prerequisites:	
Course requirements: Course requirements: Semester work submitted by the student, whose evaluation is 30% of the final grade, mid term test, which represents 20% of the final grade and 50% of the final grade is the final exam. The evaluation scale is as follows: A 100 – 91; B 90 – 81; C 80 – 73; D 72 – 66; E 65 – 60; FX less than 60.	
Learning outcomes: Learning outcomes: The student will gain an overview of the functioning of financial and capital markets (FaCM), their laws, position, and role of firms in them, as well as the tools used. It also will gain an overview of the financial ratios of firms used in capital markets, as well as the different levels of risk. They will acquire the ability to distinguish and evaluate the usefulness and suitability of the use of financial instruments for specific objectives. The participant will learn how to compile a firm's cash flow and its practical use. At the same time, the student will get an overview of information technologies in financial markets and ways of their use in firms, as well as the pitfalls of these technologies.	
Class syllabus: Class syllabus: 1. Financial and capital markets - institutions, tools, functioning, position of companies on FaCM 2. Firms as a subject of the capital market - stocks, performance indicators, risks on FaCM, and their economic functioning 3. Price of money - interest, exchange rates, forward prices and risks of money and foreign exchange markets 4. Debt instruments - basic parameters, yield to maturity, creditworthiness, loan comparison 5. Cash flow of the company, financial planning, use 6. Technologies in FaCM and in corporate finance	
Recommended literature: John Calverley – „Pocket Guide to Economics for the Global Investor”, American Express Bank N. Gregory Mankiw – Principles of Economics S. C. Myers – Teorie a praxe firemních financi, Victoria Publishing

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Social and Economic Sciences	
Course ID: FSEV.ÚE/UE-090/16/15	Course title: Game Theory
Educational activities: Type of activities: lecture / seminar Number of hours: per week: 2 / 2 per level/semester: 28 / 28 Form of the course: combined	
Number of credits: 6	
Recommended semester: 2.	
Educational level: II.	
Prerequisites: FSEV.ÚE/1-AE-140/14 - Models of Competition and Cooperation	
Course requirements: During the semester there will be two midterm tests, each for 20 points, during the semester each student will present a project for 10 points, the exam will be a written test with a maximum of 50 points. Credits will not be awarded to a student who obtains a total of less than 25 points in the continuous assessment during the semester. grade A B C D E Fx points 91-100 81-90 73-80 66-72 60-65 <59	
Learning outcomes: After successful completion of the course the student will be able to analyze strategic situations with non-cooperative games in strategic and extended form. They will be able to modeling the different situations of the interaction decision and using the stochastic elements in decision making. He will be able to calculate the different types of equilibrium in non-cooperative games in strategic and extended form and to know the sufficient conditions for their existence. Enable successful study of economic disciplines in which interactive decision making plays an important role, in particular sectoral organization, strategic international trade theory, and public procurement theories	
Class syllabus: 1. Evolutionary games 2. Static evolution game 3. Evolutionarily stable strategie 4. Negotiation Games - Nash negotiation solution 5. Games with incomplete information 6. Nash equilibrium solution in a 2x2 game 7. Nash equilibrium solution in a game with a matrix of dimensions more than 2x2 8. Repeated games 9. The ultimate games 10. Decision-making with certainty, risk and uncertainty	
Recommended literature: Recommended literature:

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Social and Economic Sciences	
Course ID: FSEV.ÚE/UE-020/16/15	Course title: Microeconomic Analysis
Educational activities: Type of activities: lecture / practicals Number of hours: per week: 2 / 2 per level/semester: 28 / 28 Form of the course: combined	
Number of credits: 6	
Recommended semester: 1.	
Educational level: II.	
Prerequisites: FSEV.ÚE/1-AE-110/14 - Macroeconomics	
Course requirements: During the semester, it is possible to obtain 10 points for activity in lectures and seminars. There will be two continuous written tests during the semester, each for 20 points. The exam will take place orally. Credits will not be awarded to a student who obtains a total of less than 25 points during the semester. grade A B C D E Fx points 91-100 81-90 73-80 66-72 60-65 <59	
Learning outcomes: The course will provide students with upgraded knowledge on the subject of microeconomic theory and practical part; knowledge of companies operating in conditions of perfect competition, monopolistic companies and companies operating under oligopoly conditions and proces searching of equilibrium these companies.	
Class syllabus: <ul style="list-style-type: none"> • Consumer behavior and utility • Production functions, cost theory • Profit maximization • Asset markets • Uncertainty • Risk assets • Welfare • Externality • Public goods 	
Recommended literature: Kreps, David M.: A Course in Microeconomic Theory. Princeton, Princeton University Press 1990. Varian, Hal R.: Microeconomic Analysis. New York, W.W. Norton & Company 1992	
Languages necessary to complete the course: Slovak language and English language

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Social and Economic Sciences	
Course ID: FSEV.ÚE/UE-080/16/22	Course title: Modelling of Economic Processes
Educational activities: Type of activities: lecture / seminar Number of hours: per week: 2 / 2 per level/semester: 28 / 28 Form of the course: combined	
Number of credits: 6	
Recommended semester: 3.	
Educational level: II.	
Prerequisites:	
Course requirements: During the semester, it is possible to obtain 10 points for activity in lectures and seminars. There will be two midterm tests during the semester, each for 20 points. The exam will take place orally. Credits will not be awarded to a student who obtains a total of less than 25 points during the semester. grade A B C D E Fx points 91-100 81-90 73-80 66-72 60-65 <59	
Learning outcomes: After successful completion of the course the student will be able to apply the knowledge of modeling economic processes to solving various economic problems using different types of models based on mathematical modeling	
Class syllabus: <ul style="list-style-type: none"> • General issues of mathematical modeling and modeling approaches • Problems of aggregation and aggregation in models • Modeling of investment processes • Stochastic models • Markov chains • Recovery models • Inventory modeling • Modeling of service processes 	
Recommended literature: Fábry, J.: Matematické modelování. Nakladatelství Oeconomica, Praha 2007 Chin, Wai-Ki – Huang, Ximin – Ng, Michael K. – Sin, Tok-Kuen: Markov Chains. Models, Algorithms, and Applications. Second Edition. New York, Springer 2013. Mark A. Pinsky, Samuel Karlin. An Introduction to Stochastic Modeling Fourth Edition. 2011, Academic Press is an imprint of Elsevier

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Social and Economic Sciences	
Course ID: FSEV.ÚE/UE-060/16/15	Course title: Models of Banking Operations
Educational activities: Type of activities: lecture / seminar Number of hours: per week: 2 / 2 per level/semester: 28 / 28 Form of the course: combined	
Number of credits: 6	
Recommended semester: 2.	
Educational level: II.	
Prerequisites:	
Course requirements: During the term there will be two control written works (together 20 points), two presentations on actual banking topics (each 5 points), the first topic to be presented till the 6th week of the term, the second topic within 7-11th week. Other activities: 10 points. Final written exam (60 points). Hodnotenie A B C D E FX body 91-100 81-90 73-80 66-72 60-65 <59	
Learning outcomes: To get the knowledge on banking operations towards banking and non-banking clients; interbank market; methods for risk management and calculation of bank capital requirements; Basel accords; Banking union.	
Class syllabus: <ul style="list-style-type: none"> • Bank Capital. • Interbank Operations. • Global Banking Activities. • Basel Accords. • Market Risk and Capital Adequacy. • Interest Rate Risk and Capital Adequacy. • Credit Risk and Capital Adequacy. • Operational Risk and Capital Adequacy. • Managing Liquidity. • Banking Union. • Payment and Communication Interbank Systems.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Social and Economic Sciences	
Course ID: FSEV.ÚE/UE-030/16/15	Course title: Optimal Programming
Educational activities: Type of activities: lecture / seminar Number of hours: per week: 2 / 2 per level/semester: 28 / 28 Form of the course: combined	
Number of credits: 6	
Recommended semester: 1.	
Educational level: II.	
Prerequisites:	
Course requirements: ongoing test during the semester 2 times for 30 points, methods of presentation solutions during the semester for 10 points, the final test for 30 points	
Learning outcomes: Learning outcomes of the course unit The student obtains knowledge of the construction of mathematical models of economic phenomena and processes at different levels of the economy, which are searching for some of the best solutions. It is able to identify the decision variables of the model, model their interrelationships so that these links display the most realistic real economic world and can also formulate criteria for assessing the quality of individual solutions. The student will have knowledge of solution methods as well as software background for solving different types of optimization tasks.	
Class syllabus: Classification of mathematical programming models and methods. 2. Linear programming (LP) models. 3. Methods of solving LP tasks. 4. Theory of duality. 5. Models and methods of discrete programming. 6. Non-linear programming (NP) models. 7. Basic methods for solving NP problems. 8. Introduction to stochastic programming. 9. Network analysis tasks. 10. Software to solve mathematical programming tasks.	
Recommended literature: .. Laščiak, A. a kol.: Optimálne programovanie. Alfa, Bratislava 1991. 2. Williams, H.P.: Model Solving in Mathematical Programming. John Wiley & Sons, New York 1992. 3. Hamala, M., Trnovská, M.: Nelineárne programovanie. Epos, Bratislava 2012.

STATE EXAM DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Social and Economic Sciences	
Course ID: FSEV.ÚE/2-UE-SP5/22	Course title: Quantitative Methods in Economics
Number of credits: 9	
Educational level: II.	
Recommended prerequisites: Prerequisites: All compulsory, optional and selection courses according to the study plan.	
Course requirements: Course requirements: The grade is awarded by the state examination committee. Rating A B C D E FX points 91-100 81-90 73-80 66-72 60-65 <59	
Learning outcomes: Student is able to demonstrate mastery of the requirements of the two-years master's study in quantitative methods in economics. Student is able to integrate theoretical and practical knowledge and master the principles of construction and economic interpretation of theoretical models.	
Class syllabus: <ol style="list-style-type: none"> 1. Optimization problems and tasks of mathematical programming. General task of mathematical programming. Types of tasks and principles of their solution. The use of non-linear principles optimization in microeconomic analysis. 2. Linear programming tasks and their properties. Duality theory in linear programming. 3. Simplex method and its primary and dual algorithm. Analysis of sensitivity in tasks of linear programming and parametric programming. 4. Optimization problems with integer conditions and methods of their solution. 5. Tasks with a block-diagonal structure. Decomposition algorithm of solutions and economic interpretations. 6. Nonlinear programming - convexity and Karush - Khun - Tucker conditions of optimality. 7. Linear one-equation econometric model. Estimating the parameters of a linear model using methods of least squares (OLS). Statistical properties of estimated parameters. 8. Characteristics of random disturbances in the model. Estimating the variance of a random disturbance. Quality measurement settlements. 9. Diagnostic control of the econometric model (autocorrelation, heteroskedasticity, normality, multicollinearity, structural changes, functional form of the model, etc.). 10. Econometric models with dummy variables (dependent variables, explanatory variable). 11. One-equation linear models of time series (ARMA). Testing for unit roots. One-equation models of volatility (GARCH). 12. Multi-equation linear models of time series (VAR, VECM). Models of simultaneous equations. 13. Static games with full information in normal form. Solution methods, mixed strategies and linear optimization. 14. Games in extensive form, games with imperfect and incomplete information, equilibria in games in extensive form, games with repetition. 15. Static games with incomplete information (Bayesian games); Bayesian Nash equilibrium, 	

- equilibrium in combined strategies, Auctions.
16. Evolutionary games, basic concepts, evolutionary model, solving evolutionary games, evolutionarily stable strategies.
 17. Quadratic programming task and its algorithmic solution. The task of selecting a portfolio from risky assets and methods of its solution.
 18. Algebra of portfolio of risky assets in the space of past and future returns. Risk measures.
 19. Capital asset valuation model and portfolio selection tasks with additional risk factor.
 20. Replication models – analysis and exposure of the fund's investment style. Models of choosing the best compromise portfolio.

State exam syllabus:
