COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Natural Sciences	
Course ID: PriF.KJCh/PriF-DSSZ-001/22	Course title: Dissertation 1
Educational activities: Type of activities: Number of hours: per week: per level/semester: Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 1.	
Educational level: III.	
Prerequisites:	
Course requirements: Conditions for passing the course: Course evaluation will be conducted individually based on the doctoral student's individual study plan, as well as on the basis of an agreement between the academic supervisor and doctoral student. Evaluation is standard and shall reflect a sufficient orientation of the student in the presented subject matter for successful course completion according to the Study Regulations of the Faculty of Natural Sciences UK.	
Learning outcomes: Educational outcomes: By passing this subject, the student will achieve sufficient orientation in the project issue of the dissertation thesis based on specific individual topics. This set task of knowledge is essential for a firmly established theoretical readiness of the course graduate in terms of his/her awareness, and equally supports his/her potential in a wide field of applied practice. Undoubtedly, the outcomes of his/her education will also be reflected in the student's overview in terms of methodological approaches in the subject matter.	
Class syllabus: Brief outline of the course: The subject Dissertation Thesis is a compulsory part of the doctoral student's study activities. The student requires a supremely individual character with regard to the specifics of the individual topics of the dissertation thesis. The basic syllabus should already be evident within the individual study plan of the doctoral student. The subject is important especially in terms of understanding the basic theoretical and methodological aspects of the solution to the topic of the dissertation thesis with emphasis on self-study and consultation with the academic supervisor and a wide spectrum of consultants, who will take part in creating the professional potential of the doctoral student for the next (scientific) stage of his/her studies.	
Recommended literature: Recommended literature: No specifications regarding the character of a specific topic for the dissertation thesis. Recommended literature is included in the doctoral student's individual study plan.	

Languages necessary to complete the course: Required language for successful course completion: Slovak language in combination with English (study literature in English)

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Natural Sciences	
Course ID: PriF.KJCh/N-DCJC-002/22	Course title: Metrology and spectroscopy of ionizing radiation
Educational activities: Type of activities: Number of hours: per week: per level/semester: Form of the course: on-site learning	
Type, volume, methods and workload of the student - additional information self-study of prescribed literature, consultations with teachers and supervisor; full-time, combined method, full-time form	
Number of credits: 5	
Recommended semester: 1.	
Educational level: III.	
Prerequisites:	
Course requirements: consultations and discussion of the studied literature, preparation of final work with discussion	
Learning outcomes: The graduate of the course will gain knowledge and skills related to the appropriate selection of detection equipment depending on the origin of the sample and the type of measured radiation. At the same time, will be able to handle basic settings related to measurement parameters and evaluation of measured data.	
Class syllabus: Characteristics of individual types of ionizing radiation in terms of their detection. Detector properties and detection statistics. Basic distribution distributions and statistical criteria. Uncertainties. SI units, uniformity and accuracy of measurements, error vs. uncertainty. Gas filled detectors. Scintillation spectrometry. Semiconductor detectors. Preparation of sources for measuring emitted radiation. Evaluation, processing, and interpretation of results.	
Recommended literature: •G. F. Knoll: Radiation detection and measurement, Wiley, USA, 2010. •Glenn F. Knoll: Radiation Detection and Measurement (4th Edition), John Wiley & Sons, Inc., 2010, ISBN: 978-0-470-13148-0. •Michael F. Educational activities: Type of activities: Number of hours: per week: per level/semester: Form of the course: on-site learning	
Number of credits: 5	
Recommended semester: 1., 3.	
Educational level: III.	
Prerequisites:	
Course requirements: Each course participant is required to achieve proficient knowledge and usage of the English grammar, professional vocabulary, reading and listening comprehension, writing professional texts and oral presentations. Credits will be awarded to students who will demonstrate active participation and deliver all set tasks and assignments successfully. The course participants will be awarded a pass or a fail upon course completion.	
Learning outcomes: Upon completion of the course, PhD students will effectively use the English language for professional purposes. They will proficiently comprehend targeted written and audio texts and present their viewpoints in required forms.	
Class syllabus: Theoretical and practical skills in professional written communication include appropriate structure of formal written texts (emails, application forms, personal statements, cover letters, abstracts, scientific articles, paraphrasing, using citations, citing sources, etc.) The course also focuses on theoretical explanation of correct delivery of oral texts, professional presentations and discussions. The course primary target is to facilitate PhD students with proficient usage of all the aspects of written and oral communication in various settings.

Recommended semester: 2.	
Educational level: III.	
Prerequisites:	
Course requirements: Each course participant is required to achieve proficient knowledge and usage of the English grammar, professional vocabulary, reading and listening comprehension, writing professional texts and oral presentations. Credits will be awarded to students who will demonstrate active participation during seminars and deliver all prior set tasks and assignments successfully. The course participants will be awarded a pass or a fail upon course completion	
Learning outcomes: Doctoral students who successfully pass the examination in Professional English 2 will be enabled to use the English language for specific purposes in all its forms effectively and sufficiently. They will thoroughly comprehend professional texts in written and/or audio form, acquire professional vocabulary and actively participate in various oral communication settings.	
Class syllabus: Theoretical and practical skills in professional writing communication in the English language as a follow up to prior gained knowledge in the previous semester encompass writing professional résumés, summaries, lay summaries, responses to job interview questions, professional CVs, comparing and contrasting in scientific articles, etc. Professional oral communication focusses on research-based scientific presentations and effectively led discussions.

Educational level: III.	
Prerequisites:	
Course requirements: consultations and discussion of the studied literature, preparation of the final work with discussion	
Learning outcomes: The student will gain knowledge about the origin and sources of ecologically important radionuclides, which are found in various components of the environment. Migration of these radionuclides between the individual components, including an overview of radionuclide propagation models and estimation of their doses, as well as their elimination from the environment. General view of the radiation exposure of the population from primordial radionuclides to operation and events at NPP facilities. The output is also a basic overview of the minimum legal literacy in the peaceful use of nuclear energy.	
Class syllabus: Ecologically important radionuclides and their chemistry. Sampling of environmental components. Distribution and transfer of radioactive substances in the environment. Models of radionuclide propagation in the environment and models for environmental dose estimation (EMRAS, ERICA, ..). Radiation effects and dose loads of the population. Nuclear energy industry and environment. Events at nuclear installations. Radiation accidents, nuclear bombing, and nuclear weapons tests. Protection against ionizing radiation.

Prerequisites:	
Course requirements: consultations and discussion of the studied literature, preparation of the final work with discussion	
Learning outcomes: Upon successful completion of this course, students will understand the properties and behavior of radionuclides, the theoretical nature, and principles of separation of radionuclides, differences in the separation methods of stable nuclides. It will have knowledge about radioanalytical methods using the separation of radionuclides emitting alpha and beta radiation, and their determination in environmental samples and radioactive wastes. They will learn the principles of good laboratory practice and management system for the testing laboratory in accordance with the requirements of ISO / IEC 17025 and SLSP	
Class syllabus: Definition, division, and selection of main separation methods. Solution chemistry and two-phase separation. Non-equilibrium thermodynamics, molecular diffusion, and convective mass transfer. Separation at general and local equilibrium. Separation cascades, countercurrent separation. Crystallization, precipitation, co-precipitation, isomorphic sacrySTALLIZATION. Isotopic, isomorphic and retention carriers. Adsorption theory. Molecular and ionic adsorption. Adsorption isotherms. Ion exchangers, description, and their distribution. Theory of extraction methods, solvent extraction of chelates and ionic associates. Classification of extraction systems and distribution of reagents. Apparatus and equipment used in extraction. Chromatographic column theory and classification of chromatographic methods. Ion exchange and extraction chromatography. Apparatus, equipment, and practical procedures for chromatographic separation of substances, selection of reagents. Thermochromatography. Membrane processes. Distillation. Electrochemical methods, electrophoretic and electrolytic separation. Carrier and non-carrier added separation methods. Chemical specialization of radionuclides.

COURSE DESCRIPTION

Academic year: 2022/2023	
University: Comenius University Bratislava	
Faculty: Faculty of Natural Sciences	
Course ID: PriF.KJ/N-DSSZ-028/22	Course title: Slovak for Foreign Doctoral Students 4
Educational activities: Type of activities: Number of hours: per week: per level/semester: Form of the course: on-site learning	
Number of credits: 2	
Recommended semester:	
Educational level: III.	
Prerequisites:	
Course requirements: Grading (Assessment/Evaluation): Active participation during lessons, ongoing work on the assignments. There will be a final examination at the end of the semester. Credits will be awarded to students who receive more than 60% on the final examination. The course participants will be awarded a pass or a fail upon course completion.	
Learning outcomes: Objectives and outcomes: The objective of the course is to acquire the basics of Slovak in a communicative way, to develop individual language skills (listening, reading, writing and speaking) based on the Common European Framework of Reference for Languages (CEFR) for the levels A1 – A2, pre-intermediate level. Based on the completion of the course, the participants are able to understand the common situations and they are able to have a discussion and comment basic daily scenarios.	
Class syllabus: Brief outline of the course: The lessons contain the basics of Slovak grammar which are relevant to the specifics of Slovak as a foreign language. Selected grammatical aspects (verb - conjugation/next conjugation classes, possessive pronouns, I like/enjoy doing something, I like something, comparison of adjectives and adverbs, conditional) are practised. Vocabulary is focused on real-life communication needs.
