## COURSE DESCRIPTION

<b>Academic year:</b> 2022/2023	
<b>University:</b> Comenius University Bratislava	
<b>Faculty:</b> Faculty of Natural Sciences	
<b>Course ID:</b> PriF.KGe/N-mBGE-113/22	<b>Course title:</b> Advanced genetics (3) - Quantitative, population and behavioral genetics
<b>Educational activities:</b> <b>Type of activities:</b> lecture <b>Number of hours:</b> <b>per week:</b> 4 <b>per level/semester:</b> 56 <b>Form of the course:</b> on-site learning	
<b>Number of credits:</b> 5	
<b>Recommended semester:</b> 3.	
<b>Educational level:</b> II.	
<b>Prerequisites:</b>	
<b>Course requirements:</b> Obtaining at least 60% of points from the course evaluation. The assessment consists of two components: a group project and an individual written exam. A maximum of 20% of points can be obtained for the group project report and the presentation of the group project. The individual written test consists of theoretical questions and computational examples. To obtain grade A it is necessary to obtain at least 92% of points, to obtain grade B at least 85% of points, to obtain grade C at least 77% points, to obtain grade D at least 69% points and to obtain grade E at least 60% of the total course evaluation. Credits will not be awarded to a student who scores less than 60% of the points.	
<b>Learning outcomes:</b> Students will gain knowledge about genetic laws, evolutionary forces and their effects on populations of biological species. They will be able to use the acquired skills to determine what factors affect the structure and evolution of the population and to verify various evolutionary hypotheses by studying simple models. They will be able to use the acquired knowledge in the design and evaluation of experiments in which individuals forming populations at different levels of structure are evaluated. Based on the acquired knowledge, they will be able to monitor the evolution of populations, their divergence, the presence of selection, genetic distances, etc. The acquired knowledge can be used in the field of conservation biology in the protection of endangered species. Another goal of the course is that after completing the course, students understand the basic principles and methods of behavioral genetics, know how to use these principles in the study of behavior and have an idea of how to distinguish between different forms of behavioral genetic and non-genetic component. By completing the course, students should gain knowledge of the potential of genetics to understand issues related to cognition, emotions, personality. Ethical issues arising from some areas of behavioral genetics will also be discussed.	
<b>Class syllabus:</b> History of population genetics. Probability in population genetics. Genetic variability in populations, its sources: mutations, linkage and recombination, migration and their rates. Hardy-Weinberg's law. Neutral model, random genetic drift and Wright-Fisher model. Effective	

population size. Inbreeding. Neutral model and coalescent theory. Darwinian selection. Population substructure. Linkage and linkage disequilibrium. Genetics and analysis of quantitative traits, GWAS.

The course will also discuss topics in behavioral genetics, many of which will use the principles of quantitative and population genetics: the history of behavioral genetics, the design of genetic experiments aimed at studying behavior; heritability; methods for identifying genes involved in specific types of behavior; basic principles of cognitive biology; microorganisms as cognitive systems; behavioral genetics of insects, birds, mammals and primates; human behavioral genetics and its methodological tools; neurogenetics; learning and memory; general and specific cognitive abilities; cognitive disorders and their genetic basis; psychopathology and personality disorders; social behavior and its genetic component; genetic reasons for antisocial behavior; sexual orientation; evolutionary aspects of behavior and its genetic control.

<b>Course ID:</b> PriF.KGe/N-mBGE-130/22	<b>Course title:</b> Frontiers in genetics and molecular biology/Aktuálne výzvy genetiky a molekulárnej biológie
<b>Educational activities:</b> <b>Type of activities:</b> lecture <b>Number of hours:</b> per week: 2 per level/semester: 28 <b>Form of the course:</b> on-site learning	
<b>Number of credits:</b> 2	
<b>Recommended semester:</b> 1., 3.	
<b>Educational level:</b> II.	
<b>Prerequisites:</b>	
<b>Course requirements:</b> Active participation at the sessions, discussions within the group of students and with the teacher. At the end of the course the student will write a short minireview on the topic selected from those discussed during the semester. The minireview will be handed to the teacher in an electronic form one week prior the oral exam, i.e. discussion about the minireview and the chosen topic. Weights of the parts of the exam: 50% minireview – 50% oral exam. For passing the exam it is necessary to gain at least 50% of the points. Grading: 60-69 % = E; 69-77 % = D; 77-85 % = C; 85-92 % = B; 92-100 % = A. The course is provided on-site. If on-site form is not possible, the course will be provided online.	
<b>Learning outcomes:</b> Active participation at the sessions, discussions within the group of students and with the teacher. At the end of the course the student will write a short minireview on the topic selected from those discussed during the semester. The minireview will be handed to the teacher in an electronic form one week prior the oral exam, i.e. discussion about the minireview and the chosen topic. The course is provided on-site. If on-site form is not possible, the course will be provided online.	
<b>Class syllabus:</b> As a source of the presentations, we will employ a web portal iBiology.org, containing a large database of exciting talks from prominent speakers (including Nobel prize winners). The talks are separated into 2-3 parts, and they are usually accompanied by English subtitles that make it easier to follow the speaker. The first part presents a general introduction into the field, the subsequent parts are dedicated to the experimental results usually leading to important discoveries. The teacher will provide links to the corresponding talks. The students will be asked to watch the first (general) part at home. Teacher will post a list of questions related to the talk before the corresponding session. It is expected that the students will prepare their own list of questions. At the beginning of each session the whole group will watch the second part of the talk (30-45 min depending on the talk). Then the students will discuss their questions and comments within	

groups (3-6 students per group, 15 min). The teacher will then moderate the discussion and answer students' questions (if possible). Combining all the above activities will have at least two major benefits: We will (1) learn new things from contemporary molecular and cell biology and (2) train the discussion in scientific English. The course will employ a combination of five essential learning tools: (1) choice; (2) collaboration; (3) communication; (4) critical thinking; and (at least to some extent) (5) creativity. Examples of the topics: The molecular biology of gene regulation; Mechanisms of chromosomal DNA replication; Epigenetics: Why your DNA isn't enough; Consequences of aneuploidy; Protein folding, prions and disease; Self-organization in biology; The evolutionary design of proteins; Telomeres and human disease; Protein localisation inside cells; Understanding cell shape; mTOR and the regulation of growth; Cell cycle regulation; The spatial organization of bacterial cells; Mitochondria, metabolism, and cell behavior; The secretory pathway; The ubiquitin-proteasome system; Kinetochore and chromosome segregation; Yeast sex; The genetic basis of evolutionary change in morphology; Genetics of aging; Neurodegenerative disease: The coming epidemic; Genes, the brain, and behavior.

<b>Number of credits:</b> 2	
<b>Recommended semester:</b> 2.	
<b>Educational level:</b> II.	
<b>Prerequisites:</b>	
<b>Course requirements:</b> There will be a written test during the examination period of the semester. The grading scale is as follows: A – 92%, B – 84%, C – 76%, D – 68%, E – 60%. Credits will not be awarded to a student who gets less than 60% from the test. Scale of assessment (preliminary/final): 0/100	
<b>Learning outcomes:</b> During the course, students will gain an overview of experimental strategies that allow them to determine the complete sequences of genomes, identify and annotate genes and then examine their biological functions. After completing the course, students will learn the basics of genomics, transcriptomics, proteomics, interactomics, epigenomics, systems and synthetic biology, functional and comparative analysis of complete genomes and get acquainted with the importance of these disciplines for modern biomedical research and biotechnological applications.	
<b>Class syllabus:</b> Genomics and its importance for modern biomedical research. From individual genes to complete genomes. Physical genome mapping techniques. Experimental strategies for complete genome sequencing projects (from bacterial genomes to human genomes). Genomics and personalized medicine. "Personal genomes" and ethical aspects of genomics. Personalized therapy. Molecular phylogenomics. Paleogenomics. Metagenomics. Determination of DNA sequences of complex biological communities. Analysis of the dynamics of microorganism communities. New approaches in DNA sequencing technology. From chemical and enzymatic methods to automatic DNA analyzers. Nucleic acid sequencing methods by SBS, SBL and SBH approaches. Nanopore sequencing.	

Principles of annotation and sequence analysis of complete genomes. Categorization of genes and functional elements in genomes. Bioinformatics principles of identification of new genes. Genes and genomic databases and datamining.

Comparative and evolutionary genomics. Evolutionary processes taking place at the genome level. Functional analysis of complete genomes. Principles of transcriptome and proteome analysis. Epigenomics.

Introduction to systems biology and mathematical modeling. Biological systems as computer models. Fundamentals of mathematical models in biology.

Synthetic biology. The concept of minimal genome. Methods of synthetic biology. DNA synthesis strategies, from oligonucleotide preparation to genome synthesis. Synthetic microorganisms. Biotechnological applications of synthetic organisms.
