STATE EXAM DESCRIPTION

Academic year: 2024/2025	
University: Comenius University Bratislava	
Faculty: Faculty of Natural Sciences	
Course ID: FMFLKDMFI/1-UMA-951/22	Course title: Fundamentals of Mathematics
Number of credits: 2	
Educational level: I.	
<p>Course requirements:</p> <p>The course 1-UMA-951/15 Fundamentals of Mathematics has two parts:</p> <p>A) School mathematics test The test uses the types of tasks from mathematics tests for the external part of the Matura exam and from mathematics tests at the entrance exams at FMFI UK, a total of 20 short-answer tasks or with a choice of several options.</p> <p>B) Oral exam The student draws an assignment, which has 3 parts - three different circuits 1. geometry, 2. combinatorics, probability and statistics, 3. algebra and theoretical arithmetic, 4. mathematical analysis. Each part contains - the task from the relevant area, the solution of which (including the justification of individual steps) the student will demonstrate during the oral answer, - definition of the area of the relevant heading, which is related to the solved task; in the oral answer the student will state the basic concepts and statements of this area, or their relationship to the problem. Maximum points: • 20 points from the school mathematics test (1 point for each correct answer), • 25 points for each of the three parts of the assignment (10 for solving the problem, 15 for the theoretical part), thus a maximum of $20 + 3 \cdot 25 = 95$ points in total. A student completes the course if he/she obtains at least 5 points for each of the three parts of the assignment and a total of at least 46 points. Scale of assessment (preliminary/final): 0/100</p>	
<p>Learning outcomes:</p> <p>State exam from selected areas of the core subjects of the program.</p>

Study of affine space by analytical method (subspaces - linear varieties, their parametric and general equations, intersections and mutual positions)</p> <p>2. Study of Euclidean space by analytical method (scalar product of vectors and metrics, perpendicularity of subspaces, distances of subspaces, angles)</p> <p>3. Affine representations of spaces (analytical expression of affine mapping, invariants of affine transformations, group of similarities of Euclidean space)</p>	

4. Axiomatic construction of geometry: incidental and ordered plane (axioms of incidence and arrangement and their consequences, models of incident and ordered plane.)
